 - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- Antiepileptics** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 18 p. 964 (hyponatraemia), TABLE 12 p. 963 (peripheral neuropathy), TABLE 11 p. 962 (CNS depressant effects)

brivaracetam · carbamazepine · eslicarbazepine · ethosuximide · fosphenytoin · gabapentin · lacosamide · lamotrigine · levetiracetam · oxcarbazepine · paraldehyde · perampamil · phenobarbital · phenytoin · pregabalin · primidone · retigabine · rufinamide · stiripentol · tiagabine · topiramate · valproate · vigabatrin · zonisamide

- ▶ Manufacturer advises caution on concurrent use of **eslicarbazepine** with drugs that prolong the PR interval
- ▶ Avoid taking milk, dairy products, carbonated drinks, fruit juices, or caffeine-containing food and drinks at the same time as **stiripentol**.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **5-HT₃-receptor antagonists (ondansetron)**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **valproate**. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital, phenytoin)** are predicted to decrease the exposure to **afatinib**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **Alcohol** potentially increases the risk of visual disturbances when given with **retigabine**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 964
- ▶ **Carbamazepine** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Stiripentol** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 962
- ▶ **Phenytoin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **gabapentin**. **Gabapentin** should be taken 2 hours after antacids. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **valproate**. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **perampamil**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to slightly decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with

- ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to slightly increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 12 p. 963
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antiarrhythmics (lidocaine)**. [\[Severe\]](#) Anecdotal
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [\[Mild\]](#) Study
 - ▶ Antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**brivaracetam**). [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**brivaracetam**). [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**lamotrigine**) potentially increase the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**lamotrigine**). Adjust **lamotrigine** dose and monitor **carbamazepine** concentration, p. 225, p. 218. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) increase the concentration of antiepileptics (**phenobarbital**). Adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**topiramate**) increase the risk of carbamazepine toxicity when given with antiepileptics (**carbamazepine**). [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**stiripentol**) increase the concentration of antiepileptics (**carbamazepine, phenobarbital**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to antiepileptics (**eslicarbazepine, oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**eslicarbazepine**) increase the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to antiepileptics (**eslicarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**valproate**). [\[Severe\]](#) Study
 - ▶ Antiepileptics (**vigabatrin**) decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Mild\]](#) Study
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 225. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 225. [\[Moderate\]](#) Study → Also see TABLE 11 p. 962

- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**lamotrigine**). Adjust **lamotrigine** dose and monitor rash, p. 225. [\[Severe\]](#) Study
- ▶ Antiepileptics (**lamotrigine**) are predicted to increase the concentration of antiepileptics (**oxcarbazepine**) and antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of antiepileptics (**lamotrigine**). Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of antiepileptics (**perampanel**) and antiepileptics (**perampanel**) increase the concentration of antiepileptics (**oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenobarbital**) and antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**) increase the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) affect the concentration of antiepileptics (**fosphenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) potentially decrease the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) potentially decrease the concentration of antiepileptics (**carbamazepine**). Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**primidone**). [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**primidone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**rufinamide**). Adjust **rufinamide** dose, p. 232. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to antiepileptics (**tiagabine**). Monitor and adjust **tiagabine** dose, p. 237. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**topiramate**) and antiepileptics (**topiramate**) increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**topiramate**). [\[Mild\]](#) Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of antiepileptics (**valproate**) and antiepileptics (**valproate**) increase the concentration of antiepileptics (**phenobarbital**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**topiramate**) increase the risk of toxicity when given with antiepileptics (**valproate**). [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**) and antiepileptics (**zonisamide**) affect the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study

Antiepileptics (continued)

- ▶ Antiepileptics (**fosphe**nytoin, **phenytoin**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**topiramate**) potentially increase the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antifungals, azoles (**miconazole**) increase the risk of carbamazepine toxicity when given with **carbamazepine**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with **fosphe**nytoin. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with **phenytoin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles (**fluconazole**) and antifungals, azoles (**fluconazole**) increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 218. [Severe] Theoretical → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**fluconazole**) increase the concentration of antiepileptics (**fosphe**nytoin, **phenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Study
- ▶ **Fosphe**nytoin very markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **fosphe**nytoin. [Moderate] Study
- ▶ **Phenobarbital** decreases the concentration of antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ **Phenytoin** very markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study
- ▶ **Primidone** is predicted to decrease the concentration of antifungals, azoles (**itraconazole**). [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **carbamazepine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 960
- ▶ **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles (**ketoconazole**) and antifungals, azoles (**ketoconazole**) slightly increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 218. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the concentration of antifungals, azoles (**ketoconazole**). Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphe**nytoin, **phenytoin**) decrease the exposure to antifungals, azoles (**ketoconazole**). Avoid. [Moderate] Study
- ▶ **Primidone** is predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles (**posaconazole**) and antifungals, azoles (**posaconazole**) increase the concentration of **carbamazepine**. Avoid. [Moderate] Theoretical
- ▶ **Phenobarbital** is predicted to decrease the concentration of antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphe**nytoin, **phenytoin**) are predicted to decrease the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ **Fosphe**nytoin decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to **fosphe**nytoin. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 434. [Moderate] Study
- ▶ **Phenytoin** decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to **phenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 434, p. 230. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antifungals, azoles (**voriconazole**). Avoid. [Moderate] Theoretical
- ▶ Antihistamines, sedating (**hydroxyzine**) potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antimalarials (**artemether**) with lumefantrine. Avoid. [Severe] Study
- ▶ Antimalarials (**pyrimethamine**) increase the risk of haematological toxicity when given with antiepileptics (**fosphe**nytoin, **phenytoin**). [Severe] Study
- ▶ Antimalarials (**pyrimethamine**) are predicted to increase the risk of haematological toxicity when given with antiepileptics (**phenobarbital**, **primidone**). [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of antimalarials (**piperaquine**). Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **phenobarbital**, **primidone**) potentially increase the risk of toxicity when given with antimalarials (**quinine**). [Unknown] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to antipsychotics, second generation (**aripiprazole**). Adjust **aripiprazole** dose, p. 277. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Theoretical → Also see TABLE 11 p. 962
- ▶ **Carbamazepine** is predicted to increase the risk of myelosuppression when given with antipsychotics, second generation (**clozapine**). Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**clozapine**). [Moderate] Anecdotal → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**lurasidone**). Avoid. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Carbamazepine** potentially decreases the exposure to antipsychotics, second generation (**olanzapine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to antipsychotics, second generation (**olanzapine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Valproate** increases the risk of adverse effects when given with antipsychotics, second generation (**olanzapine**). [Severe] Study
- ▶ **Valproate** slightly increases the exposure to antipsychotics, second generation (**paliperidone**). Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**paliperidone**). Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 962
- ▶ **Valproate** potentially increases the risk of neutropenia when given with antipsychotics, second generation (**quetiapine**). [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**quetiapine**). [Moderate] Study → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine**, **fosphe**nytoin, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antipsychotics, second generation (**risperidone**). Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Stiripentol** increases the concentration of **benzodiazepines (clobazam)**. [Severe] Study
- ▶ **Benzodiazepines (chlordiazepoxide)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
- ▶ **Benzodiazepines (clobazam, clonazepam)** potentially affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Anecdotal
- ▶ **Benzodiazepines (diazepam)** potentially affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Carbamazepine** is predicted to decrease the concentration of **berotralstat**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Valproate** increases the exposure to **bupropion**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) might decrease the concentration of **cabotegravir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Calcium channel blockers (verapamil)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** potentially increase the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Valproate** increases the exposure to **calcium channel blockers (nimodipine)**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **valproate**. Avoid or adjust dose. [Severe] Study
- ▶ **Capecitabine** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Anecdotal
- ▶ **Carbapenems** decrease the concentration of **valproate**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 429. [Moderate] Theoretical
- ▶ **Cenobamate** might increase the exposure to antiepileptics (**fosphenytoin, primidone**). [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Cenobamate** slightly increases the exposure to antiepileptics (**phenobarbital, phenytoin**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Cenobamate** is predicted to decrease the concentration of **lamotrigine** and **lamotrigine** might affect the efficacy of **cenobamate**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Oxcarbazepine** decreases the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to alter the effects of **cliofazolin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobicostat**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) are predicted to decrease the concentration of **cobicostat**. [Severe] Theoretical
- ▶ **Cobicostat** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see *Contraceptives, interactions* p. 566. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine** and **lamotrigine** might decrease the efficacy of **combined hormonal contraceptives**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see *Contraceptives, interactions* p. 566. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **lamotrigine**. [Moderate] Study
- ▶ **Diazoxide** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Disulfiram** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 471. [Severe] Study
- ▶ **Carbamazepine** decreases the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 471. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 471. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) affect the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ **Enteral feeds** decrease the absorption of **phenytoin**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [Severe] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Oxcarbazepine** decreases the exposure to **erlotinib**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see *Contraceptives, interactions* p. 566. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see *Contraceptives, interactions* p. 566. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, phenytoin**) are predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Carbamazepine** is predicted to decrease the concentration of **fenfluramine**. Adjust dose. [Severe] Theoretical
- ▶ **Stiripentol** (given with clobazam, and with or without valproate) modestly increases the exposure to **fenfluramine**. Adjust fenfluramine dose, p. 221. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fluorouracil** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Folates** are predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **gefinitinib**. Avoid. [Severe] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **gefinitinib**. [Moderate] Theoretical
- ▶ **Oxcarbazepine** decreases the exposure to **gefinitinib**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit** juice slightly increases the exposure to **carbamazepine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** transiently increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Topiramate** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (dexrazoxane)** might decrease the absorption of antiepileptics (**fosphenytoin, phenytoin**). Avoid. [Severe] Theoretical

Antiepileptics (continued)

- ▶ **Isoniazid** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [\[Moderate\]](#) Study → Also see TABLE 12 p. 963
- ▶ **Isoniazid** markedly increases the concentration of carbamazepine and carbamazepine increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see TABLE 1 p. 960
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ivacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ixazomib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ledipasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Carbamazepine is predicted to decrease the exposure to **ledipasvir**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, phenobarbital, primidone) are predicted to decrease the concentration of **letemovir**. [\[Moderate\]](#) Theoretical
- ▶ **Letemovir** is predicted to decrease the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the concentration of **letemovir**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of **levodopa**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, oxcarbazepine) are predicted to increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 960
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of **loop diuretics (furosemide)**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** slightly increase the concentration of carbamazepine. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. [\[Mild\]](#) Study
- ▶ **Macrolides (erythromycin)** markedly increase the concentration of carbamazepine. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to increase the effects of **MAOIs, irreversible**. [\[Severe\]](#) Theoretical
- ▶ Carbamazepine is predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ Phenytoin is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Leviteracetam** decreases the clearance of **methotrexate**. [\[Severe\]](#) Anecdotal
- ▶ Carbamazepine might decrease the concentration of **methylphenidate**. [\[Moderate\]](#) Anecdotal
- ▶ **Valproate** might enhance the effects of **methylphenidate**. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **metronidazole**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ Phenytoin is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **mianserin**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 962
- ▶ Carbamazepine markedly decreases the exposure to **mianserin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **midostaurin**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **mifepristone**. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 962
- ▶ **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, phenobarbital, primidone) are predicted to decrease the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Carbamazepine is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to antiepileptics (fosphenytoin, phenytoin). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **monoclonal antibodies (polatumumab vedotin)**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **neratinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 960
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to

- to neurokinin-1 receptor antagonists (**netupitant**). Avoid. [\[Severe\]](#) Study
- ▶ **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**phenobarbital, phenytoin**) are predicted to decrease the exposure to **nintedanib**. [\[Severe\]](#) Theoretical
 - ▶ **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [\[Severe\]](#) Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of antiepileptics (**lamotrigine, valproate**). [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz)** are predicted to affect the efficacy of **primidone** and **primidone** is predicted to slightly decrease the exposure to **NNRTIs (efavirenz)**. [\[Severe\]](#) Theoretical
 - ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **NNRTIs (nevirapine)**. [\[Severe\]](#) Study
 - ▶ **Oxcarbazepine** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Carbamazepine** slightly decreases the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** slightly decrease the exposure to **carbamazepine**. [\[Severe\]](#) Study
 - ▶ **Phenobarbital** is predicted to decrease the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** affect the concentration of **phenobarbital**. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly decrease the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Oxcarbazepine** is predicted to decrease the concentration of **NNRTIs (rilpivirine)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rifinamide, topiramate**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NRTIs (abacavir)**. [\[Moderate\]](#) Theoretical
 - ▶ **Valproate** slightly increases the exposure to **NRTIs (zidovudine)**. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 962](#)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 11 p. 962](#)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 11 p. 962](#)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 962](#)
 - ▶ **Carbamazepine** decreases the concentration of **opioids (tramadol)**. Adjust dose. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **osilodrostat**. [\[Moderate\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
 - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study → Also see [TABLE 1 p. 960](#)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **penicillins (pivmecillinam)**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) decrease the concentration of **phenothiazines (chlorpromazine)**. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 962](#)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [\[Moderate\]](#) Theoretical
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
 - ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **pirfenidone**. [\[Moderate\]](#) Theoretical

Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Valproate** potentially increases the concentration of **propofol**. Adjust dose. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine, topiramate**) are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **bivaraacetam**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** markedly increase the clearance of **lamotrigine**. Adjust lamotrigine dose, p. 225. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **rifamycins (rifampicin)** and **rifamycins (rifampicin)** are predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **Phenytoin** might decrease the exposure to **sodium glucose co-transporter 2 inhibitors (empagliflozin)**. Avoid or monitor diabetic control. [Moderate] Theoretical
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (sertraline)** potentially increase the risk of toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tiagabine**. Avoid. [Mild] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** moderately decreases the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, primidone**) are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Eslicarbazepine** decreases the exposure to **statins (rosuvastatin)**. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **statins (simvastatin)**. [Moderate] Study

- ▶ Antiepileptics (**carbamazepine, eslicarbazepine**) moderately decrease the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the concentration of **fospheytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin, phenytoin**) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Tamoxifen** (high-dose) might increase the concentration of **fospheytoin** and **fospheytoin** might decrease the concentration of **tamoxifen** (high-dose). [Severe] Theoretical
- ▶ **Tamoxifen** (high-dose) might increase the concentration of **phenytoin** and **phenytoin** might decrease the concentration of **tamoxifen** (high-dose). [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 12 p. 963
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fospheytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Fospheytoin** is predicted to decrease the concentration of **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) decrease the concentration of **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fospheytoin, phenytoin**) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Carbamazepine** potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to **carbamazepine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fospheytoin, phenytoin**) are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Carbamazepine** might decrease the exposure to **tigecycline**. [MilG] Theoretical → Also see TABLE 1 p. 960
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Antiepileptics (**fospheytoin, phenytoin**) moderately decrease the exposure to **tizanidine**. [MilG] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Antiepileptics (**fospheytoin, phenytoin**) increase the clearance of **topotecan**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 960
- ▶ **Carbamazepine** decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin**) are predicted to decrease the exposure to **treprostinil**. Adjust dose. [MilG] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Carbamazepine** decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 964
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Valproate** increases the concentration of **tricyclic antidepressants (nortriptyline)**. [Severe] Study
- ▶ **Trimethoprim** increases the concentration of antiepileptics (**fospheytoin, phenytoin**). [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampnel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study

Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) potentially increase the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 962
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

Antifungals, azoles → see TABLE 1 p. 960 (hepatotoxicity), TABLE 9 p. 962 (QT-interval prolongation)

clotrimazole · fluconazole · isavuconazole · itraconazole · ketoconazole · miconazole · posaconazole · voriconazole

- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **clotrimazole** and **ketoconazole** should be borne in mind.
- ▶ In general, **fluconazole** interactions relate to multiple-dose treatment.
- ▶ The use of carbonated drinks, such as cola, improves **itraconazole, ketoconazole, and posaconazole** bioavailability.
- ▶ Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [Severe] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 841. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. [Moderate] Anecdotal
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Itraconazole** increases the risk of busulfan toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Isavuconazole** is predicted to increase the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Miconazole** potentially decreases the exposure to **aminoglycosides (tobramycin)**. [Moderate] Anecdotal
- ▶ Oral **antacids** decrease the absorption of oral **itraconazole** capsules. **Itraconazole** should be taken 2 hours before or 1 hour after antacids. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mid] Study → Also see TABLE 9 p. 962
- ▶ **Itraconazole** slightly increases the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ketoconazole** is predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases**, **centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 218. [Severe] Theoretical → Also see TABLE 1 p. 960
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 218. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fospheytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antiepileptics (**fospheytoin**) very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fospheytoin**. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**) decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fospheytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 434. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**, **phenytoin**) decrease the exposure to **ketoconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**, **phenytoin**) are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) are predicted to decrease the concentration of **ketoconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) are predicted to decrease the concentration of **posaconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**phenytoin**) very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study
- ▶ Antiepileptics (**phenytoin**) decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (phenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 434, p. 230. [Moderate] Study
- ▶ Antiepileptics (**primidone**) are predicted to decrease the concentration of **itraconazole**. [Moderate] Theoretical
- ▶ **Miconazole** increases the risk of carbamazepine toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (fospheytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Fluconazole** increases the concentration of **antiepileptics (fospheytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 960
- ▶ Antiepileptics (**primidone**) are predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **antiepileptics (perampamel)**. [Mid] Study
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor adverse effects. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Ketoconazole** increases the exposure to **antimalarials (mefloquine)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Posaconazole** moderately increases the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **avatorombopag**. Adjust **avatorombopag** dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid

Antifungals, azoles (continued)

- prolonged use. [Mild] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
 - ▶ **Miconazole** is predicted to increase the exposure to **benzodiazepines** (**alprazolam**). Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **benzodiazepines** (**alprazolam**). [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) moderately increase the exposure to **benzodiazepines** (**alprazolam**). Avoid. [Moderate] Study
 - ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) potentially increase the exposure to **benzodiazepines** (**clobazam**). Adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **benzodiazepines** (**diazepam**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Miconazole** is predicted to increase the exposure to intravenous **benzodiazepines** (**midazolam**). Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Miconazole** is predicted to increase the exposure to oral **benzodiazepines** (**midazolam**). Avoid. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **benzodiazepines** (**midazolam**). Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **benzodiazepines** (**midazolam**). Avoid or adjust dose. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **berotralstat**. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **beta blockers, non-selective** (**nadolol**). [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **beta₂ agonists** (**salmeterol**). Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Posaconazole** is predicted to increase the exposure to **bictegravir**. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [Severe] Study
 - ▶ **Miconazole** is predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**, **verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**). [Moderate] Theoretical
 - ▶ **Fluconazole** (high-dose) is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
 - ▶ **Posaconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **calcium channel blockers** (**lercanidipine**). Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Fluconazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Study
 - ▶ **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Theoretical
 - ▶ **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
 - ▶ **Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
 - ▶ **Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**fluconazole**, **posaconazole**). [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study
 - ▶ **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cobimetinib**. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study

- ▶ **Miconazole** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole**) are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**isavuconazole, posaconazole**) are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Fluconazole** slightly increases the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Posaconazole** is predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Isavuconazole** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **drosipirenone**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ **Itraconazole** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study

Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Fluconazole** might increase the risk of bleeding when given with **factor XA inhibitors (apixaban)**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**posaconazole**, **voriconazole**) are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [\[Severe\]](#) Study
- ▶ **Itraconazole** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
- ▶ **Ketoconazole** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. Adjust **edoxaban** dose. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**posaconazole**, **voriconazole**) are predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature. [\[Moderate\]](#) Study
- ▶ **Fluconazole** is predicted to increase the exposure to **fedratinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [\[Mid\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**.

- Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fofostatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Posaconazole** is predicted to increase the exposure to **fofostatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Posaconazole** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **glecaprevir**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of posaconazole oral suspension. [\[Moderate\]](#) Study
- ▶ **Itraconazole** increases the concentration of **haloperidol**. [\[Moderate\]](#) Study
- ▶ **Fluconazole** slightly increases the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Study

- ▶ **Imatinib** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 203, **tezacaftor** with **ivacaftor** p. 206, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **ivacaftor** p. 203, **lumacaftor** with **ivacaftor** p. 205, **tezacaftor** with **ivacaftor** p. 206, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [Severe] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
- ▶ **Letermovir** slightly decreases the exposure to **voriconazole**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Metoclopramide** potentially decreases the absorption of **posaconazole** oral suspension. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Isavuconazole** increases the exposure to **mycophenolate**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study

Antifungals, azoles (continued)

- ▶ **Voriconazole** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **isavuconazole**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir increases the exposure to **itraconazole**. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ketoconazole**. Adjust dose. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **voriconazole**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **ketoconazole**. [Severe] Study
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (nevirapine)** moderately decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** moderately decrease the exposure to **ketoconazole**. Avoid. [Severe] Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **NNRTIs (nevirapine)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Fluconazole** slightly to moderately increases the exposure to **NNRTIs (nevirapine)**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **NRTIs (zidovudine)**. [Moderate] Study
- ▶ **Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose. [Moderate] Study
- ▶ **Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
- ▶ **Miconazole** greatly increases the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ponatinib**. [Moderate] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** oral suspension. Avoid. [Moderate] Study
- ▶ **Voriconazole** increases the exposure to **proton pump inhibitors** (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust alitretinoin dose. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Rifamycins** (**rifabutin**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] theoretical
- ▶ **Rifamycins** (**rifabutin**) decrease the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifamycins** (**rifabutin**). Avoid or adjust **voriconazole** dose, p. 434. [Severe] Study
- ▶ **Rifamycins** (**rifampicin**) slightly decrease the exposure to **fluconazole**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Rifamycins** (**rifampicin**) markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) markedly decrease the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifamycins** (**rifampicin**). Avoid. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Anecdotal
- ▶ **Rifamycins** (**rifampicin**) very markedly decrease the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Fluconazole** increases the risk of uveitis when given with **rifamycins** (**rifabutin**). Adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to increase the concentration of **rifamycins** (**rifabutin**) and **rifamycins** (**rifabutin**) are predicted to decrease the concentration of **ketoconazole**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **rifamycins** (**rifabutin**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifamycins** (**rifabutin**) and **rifamycins** (**rifabutin**) decrease the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Study
- ▶ Antifungals, azoles (**isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **ruxolitinib**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Ketoconazole** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **miconazole**, **posaconazole**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **SNRIs** (**venlafaxine**). [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **SSRIs** (**citalopram**). [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs** (**dapoxetine**).

Antifungals, azoles (continued)

Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors.

[Moderate] Theoretical

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) are predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **St John's wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Isavuconazole** slightly increases the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Miconazole** (including the oral gel) might increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Fluconazole** is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Isavuconazole** is predicted to increase the exposure to **statins (fluvastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Isavuconazole** is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Miconazole** (including the oral gel) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Anecdotal
- ▶ **Posaconazole** markedly to very markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Isavuconazole** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the concentration of **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **taxanes (docetaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Isavuconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Posaconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **triptans** (**almotriptan**). [Mild] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **triptans** (**eletriptan**). Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Posaconazole** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
 - ▶ **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**clotrimazole**, **ketoconazole**) are predicted to decrease the exposure to **vitamin D substances** (**colecalciferol**). [Moderate] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vitamin D substances** (**paricalcitol**). [Moderate] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Antihistamines, non-sedating** → see TABLE 9 p. 962 (QT-interval prolongation)
- acrivastine · azelastine · bilastine · cetirizine · desloratadine · fexofenadine · levocetirizine · loratadine · mizolastine · rupatadine

 - ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **azelastine** should be borne in mind.
 - ▶ Apple juice and orange juice decrease the exposure to **fexofenadine**.
- ▶ Oral **antacids** decrease the absorption of oral **fexofenadine**. Separate administration by 2 hours. [Mild] Study
 - ▶ **Anti-androgens** (**apalutamide**) slightly decrease the exposure to **fexofenadine**. [Mild] Study
 - ▶ **Anti-androgens** (**darolutamide**) are predicted to increase the concentration of **fexofenadine**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [Severe] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Moderate] Theoretical
 - ▶ **Berotrastat** is predicted to increase the concentration of **fexofenadine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Ceritinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Elhexafater** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
 - ▶ **Eliglustat** is predicted to increase the exposure to **fexofenadine**. Adjust dose. [Moderate] Study
 - ▶ **Grapefruit** juice slightly decreases the exposure to **bilastine**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit**. [Moderate] Study
 - ▶ **Grapefruit** juice increases the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **fexofenadine**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the concentration of **fexofenadine**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Lorlatinib** decreases the exposure to **fexofenadine**. [Moderate] Study
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
 - ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
 - ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
 - ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **fexofenadine**. [Mild] Theoretical

Antihistamines, non-sedating (continued)

- ▶ **Neratinib** is predicted to increase the exposure to **foxfenadine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Olaparib** might increase the exposure to **foxfenadine**. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **foxfenadine**. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **foxfenadine**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **foxfenadine**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bilastine**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** increase the clearance of **foxfenadine**. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to **foxfenadine**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **foxfenadine**. Avoid or adjust dose. [Moderate] Study
- ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **foxfenadine**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **foxfenadine**. [Severe] Study
- ▶ **Terflunomide** is predicted to increase the exposure to **foxfenadine**. [Moderate] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **foxfenadine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **foxfenadine**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **foxfenadine**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **foxfenadine**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **foxfenadine**. [Moderate] Theoretical

Antihistamines, sedating → see TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)

alimemazine · antazoline · buclizine · chlorphenamine · cinnarizine · clemastine · cyclizine · cyproheptadine · doxylamine · hydroxyzine · ketotifen · pizotifen · promethazine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can antihistamines, sedating (**chlorphenamine**, **clemastine**, **cyclizine**, **cyproheptadine**, **hydroxyzine**, **promethazine**); concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- ▶ **Cyproheptadine** might decrease the efficacy of **fenfluramine**. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with antihistamines, sedating. Avoid. [Severe] Theoretical

- ▶ **Cyproheptadine** decreases the effects of **metirapone**. Avoid. [Moderate] Study
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [Moderate] Anecdotal

Antimalarials → see TABLE 9 p. 962 (QT-interval prolongation)

artemether · arteminol · atovaquone · chloroquine · lumefantrine · mefloquine · piperaquine · primaquine · proguanil · pyrimethamine · quinine

PHARMACOLOGY **Piperaquine** has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ Antimalarials (**chloroquine**, **primaquine**) are predicted to increase the risk of methaemoglobinemia when given with topical anaesthetics, local (**prilocaine**). Use with caution or avoid. [Severe] Theoretical
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [Moderate] Theoretical
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. [Unknown] Study
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [Moderate] Study
- ▶ Antimalarials (**proguanil**) are predicted to increase the risk of adverse effects when given with antimalarials (**pyrimethamine**). [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** might decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study

- ▶ Calcium salts (**calcium carbonate**) are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ Antimalarials (**chloroquine**, **primaquine**) are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
 - ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
 - ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [Severe] Anecdotal
 - ▶ **Grapefruit** juice increases the exposure to **artemether**. [Unknown] Study
 - ▶ **Grapefruit** juice is predicted to increase the concentration of **piperaquine**. Avoid. [Severe] Theoretical
 - ▶ H_2 receptor antagonists (**cimetidine**) decrease the clearance of **chloroquine**. [Moderate] Study
 - ▶ H_2 receptor antagonists (**cimetidine**) slightly increase the exposure to **quinine**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. If given with ritonavir. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ Oral **kaolin** decreases the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **chloroquine**. [Severe] Theoretical
 - ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ Oral **magnesium** trisilicate decreases the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [Moderate] Theoretical
 - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **methotrexate**. [Severe] Theoretical
 - ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **netupitant**) are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **atovaquone**. [Moderate] Theoretical
 - ▶ **NNRTIs** (**efavirenz**) decrease the concentration of **artemether**. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **NNRTIs** (**efavirenz**) moderately decrease the exposure to **atovaquone**. Avoid. [Moderate] Study
 - ▶ **NNRTIs** (**efavirenz**) affect the exposure to **proguanil**. Avoid. [Moderate] Study
 - ▶ **NNRTIs** (**etravirine**) decrease the exposure to **artemether**. [Moderate] Study
 - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **NRTIs** (**zidovudine**). [Severe] Theoretical
 - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **pemetrexed**. [Severe] Theoretical
 - ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
 - ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Chloroquine** decreases the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
 - ▶ **Chloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins** (**rifabutin**) slightly decrease the exposure to **atovaquone**. Avoid. [Moderate] Study
 - ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study
 - ▶ **Rifamycins** (**rifampicin**) moderately decrease the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifamycins** (**rifampicin**). Avoid. [Moderate] Study
 - ▶ **Rifamycins** (**rifampicin**) moderately decrease the exposure to **mefloquine**. [Severe] Study
 - ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins** (**rifampicin**) decrease the exposure to **quinine**. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
 - ▶ **Pyrimethamine** increases the risk of adverse effects when given with **sulfonamides**. [Severe] Study
 - ▶ **Tetracyclines** (**tetracycline**) decrease the concentration of **atovaquone**. [Moderate] Study
 - ▶ **Pyrimethamine** increases the risk of adverse effects when given with **trimethoprim**. [Severe] Study
- Antipsychotics, second generation** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
- amisulpride · aripiprazole · asenapine · cariprazine · clozapine · lurasidone · olanzapine · paliperidone · quetiapine · risperidone
- ▶ **Clozapine** and **olanzapine** dose adjustment might be necessary if smoking started or stopped during treatment.
 - ▶ Avoid concomitant use of **clozapine** with drugs that have a substantial potential for causing agranulocytosis or a substantial potential to depress bone marrow function.
- ▶ **Clozapine** can cause constipation, as can **acridinium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **quetiapine**. [Moderate] Study
 - ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Anti-androgens** (**enzalutamide**) are predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study

Antipsychotics, second generation (continued)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
 - ▶ **Clozapine** can cause constipation, as can **antiarrhythmics (disopyramide, propafenone)**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
 - ▶ **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 962
 - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (valproate)** increase the risk of adverse effects when given with **olanzapine**. [Severe] Study
 - ▶ **Antiepileptics (valproate)** slightly increase the exposure to **paliperidone**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (posaconazole)** moderately increase the exposure to **lurasidone**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
 - ▶ **Clozapine** can cause constipation, as can **antihistamines, sedating (chlorphenamine, clemastine, cyclizine, cyproheptadine, hydroxyzine, promethazine)**; concurrent use
- might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
 - ▶ Antipsychotics, second generation (**clozapine**) can cause constipation, as can antipsychotics, second generation (**olanzapine, quetiapine**); concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
 - ▶ **Clozapine** can cause constipation, as can **atropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Axitinib** is predicted to increase the exposure to antipsychotics, second generation (**clozapine, olanzapine**). [Moderate] Theoretical
 - ▶ **Clozapine** can cause constipation, as can **baclofen**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
 - ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study → Also see TABLE 8 p. 961
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study → Also see TABLE 8 p. 961
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 961
 - ▶ **Cenobamate** is predicted to decrease the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
 - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
 - ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
 - ▶ **Clozapine** can cause constipation, as can **cyclopentolate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
 - ▶ **Clozapine** can cause constipation, as can **darifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Clozapine** can cause constipation, as can **dicycloverine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

- ▶ **Clozapine** can cause constipation, as can **dimenhydrinate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ Antipsychotics, second generation (**amisulpride**, **olanzapine**, **paliperidone**, **quetiapine**, **risperidone**) are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
- ▶ Antipsychotics, second generation (**aripiprazole**, **clozapine**) are predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 10 p. 962
- ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **fesoterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **flavoxate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **flupentixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
- ▶ **Clozapine** can cause constipation, as can **glycopyrronium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Grapefruit** juice is predicted to increase the exposure to antipsychotics, second generation (**lurasidone**, **quetiapine**). Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **haloperidol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone**, **quetiapine**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **homatropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **hyoscine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Idelalisib** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone**, **quetiapine**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **risperidone**. [Moderate] Theoretical
- ▶ **Clozapine** can cause constipation, as can **ipratropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **iron**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
- ▶ Antipsychotics, second generation (**aripiprazole**, **clozapine**, **lurasidone**, **paliperidone**) are predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 961
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 961
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 961
- ▶ Antipsychotics, second generation (**quetiapine**, **risperidone**) potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 962
- ▶ **Clozapine** can cause constipation, as can **loperamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
- ▶ **Clozapine** can cause constipation, as can **loxapine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** potentially increase the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone**, **quetiapine**). Avoid. [Severe] Study
- ▶ **Methylphenidate** might increase the risk of dyskinesias when given with **paliperidone**. [Severe] Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **risperidone**. [Severe] Anecdotal

Antipsychotics, second generation (continued)

- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Avoid **aripiprazole** dose, p. 277. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 280. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antipsychotics, second generation (**clozapine**, **lurasidone**, **quetiapine**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **risperidone**. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Olaparib** might alter the exposure to **quetiapine**. [\[Moderate\]](#) Theoretical
- ▶ **Clozapine** can cause constipation, as can **opioids**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Anecdotal → Also see **TABLE 11** p. 962
- ▶ **Clozapine** can cause constipation, as can **orphenadrine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Osilodrostat** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Clozapine** can cause constipation, as can **oxybutynin**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **phenothiazines**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 961 → Also see **TABLE 11** p. 962 → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **pimozide**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 961 → Also see **TABLE 11** p. 962 → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **pridnolol**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **procyclidine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **propranolol**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Clozapine** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **Quinolones (ciprofloxacin)** increase the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **clozapine**. [\[Severe\]](#) Anecdotal
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rucaparib** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Clozapine** can cause constipation, as can **solifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** increase the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **SSRIs (paroxetine)** moderately increase the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **paliperidone**. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 277. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Teriflumidone** is predicted to decrease the exposure to **clozapine**. [\[Moderate\]](#) Theoretical
- ▶ **Teriflumidone** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Clozapine** can cause constipation, as can **tiotropium**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 962

- ▶ **Clozapine** can cause constipation, as can **tolterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **tricyclic antidepressants**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **trihexyphenidyl**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **tropicamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **tropisium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Clozapine** can cause constipation, as can **umecclidinium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Vemurafenib** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Clozapine** can cause constipation, as can **zuclopenthixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962

Antithymocyte immunoglobulin (rabbit) → see immunoglobulins

Apalutamide → see anti-androgens

Apixaban → see factor XA inhibitors

Apomorphine → see dopamine receptor agonists

Apraclonidine → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

Aprémilast → see phosphodiesterase type-4 inhibitors

Aprépitant → see neurokinin-1 receptor antagonists

Argatroban → see thrombin inhibitors

Aripiprazole → see antipsychotics, second generation

Arsenic trioxide → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)

Artemether → see antimalarials

Artemimol → see antimalarials

Articaine → see TABLE 11 p. 962 (CNS depressant effects)

Ascorbic acid

▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular adverse effects when given with **iron chelators (deferrioxone)**. [Severe] Theoretical

▶ **Ascorbic acid** might increase the risk of cardiovascular adverse effects when given with **iron chelators (desferrioxamine)**. Manufacturer advises caution or adjust ascorbic acid dose; monitor cardiac function and avoid concurrent use in those with cardiac failure. [Severe] Theoretical

Aasenapine → see antipsychotics, second generation

Asparaginase → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)

▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 963

▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963

▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963

Aspirin → see TABLE 4 p. 960 (antiplatelet effects)

▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [Severe] Study

▶ Oral **antacids** decrease the absorption of oral **aspirin** (high-dose). [Moderate] Study

▶ **Bismuth** subsalicylate is predicted to increase the risk of adverse effects when given with **aspirin**. Avoid. [Moderate] Theoretical

▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [Moderate] Study

▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [Severe] Theoretical

▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study

▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical

▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical

▶ **Aspirin** (high-dose) increases the exposure to **factor XA inhibitors (edoxaban)**. Avoid. [Severe] Study

▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators (deferasirox)**. [Severe] Theoretical

▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study

▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical

▶ **NRTIs (zidovudine)** increase the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study

▶ **Aspirin** (high-dose) potentially increases the exposure to **pemtrexed**. Use with caution or avoid. [Severe] Theoretical

▶ **Selumetinib** might increase the risk of bleeding when given with **aspirin**. [Severe] Theoretical

▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical

Ataluren

▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study

▶ **Rifamycins (rifampicin)** decrease the exposure to **ataluren**. [Moderate] Study

Atazanavir → see HIV-protease inhibitors

Atenolol → see beta blockers, selective

Atezolizumab → see monoclonal antibodies

Atomoxetine

▶ **Amfetamines** are predicted to increase the risk of adverse effects when given with **atomoxetine**. [Severe] Theoretical

▶ **Berotrastat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Study

▶ **Atomoxetine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta₂ agonists** (high-dose). [Moderate] Study

▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

▶ **Dacomitinib** is predicted to markedly increase the exposure to **atomoxetine**. Avoid or adjust dose. [Severe] Study

▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical

▶ **Fedratinib** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Givosiran** is predicted to increase the exposure to **atomoxetine**. Use with caution and adjust dose. [Moderate] Study

▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **atomoxetine**. [Moderate] Theoretical

▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical

Atomoxetine (continued)

- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
 - ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- Atorvastatin** → see statins
- Atovaquone** → see antimalarials
- Atracurium** → see neuromuscular blocking drugs, non-depolarising
- Atropine** → see TABLE 10 p.962 (antimuscarinics)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **atropine**, the possibility of interactions should be borne in mind.

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **atropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p.962
- ▶ **Atropine** increases the risk of severe hypertension when given with **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study

Avanafil → see phosphodiesterase type-5 inhibitors

Avapritinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
 - ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- Avatrombopag**
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia. [Moderate] Study
 - ▶ **Mifepristone** is predicted to increase the exposure to **avatrombopag**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia. [Moderate] Study
- Avelumab** → see monoclonal antibodies
- Axitinib** → see TABLE 15 p.963 (myelosuppression), TABLE 4 p.960 (antiplatelet effects)
- ▶ **Axitinib** is predicted to increase the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Axitinib** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
 - ▶ **Axitinib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Axitinib** is predicted to increase the exposure to **antipsychotics, second generation (clozapine, olanzapine)**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **axitinib**. [Moderate] Study
 - ▶ **Axitinib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **axitinib**. [Moderate] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study → Also see TABLE 15 p.963 → Also see TABLE 4 p.960
 - ▶ **Letermovir** is predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **NRRTs (efavirenz, nevirapine)** are predicted to decrease the exposure to **axitinib**. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **St John's wort** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the exposure to **theophylline**. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **tizanidine**. [Moderate] Theoretical
- Azaticidine** → see TABLE 15 p. 963 (myelosuppression)
- Azathioprine** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 587. [Severe] Study
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **azathioprine**. [Severe] Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **azathioprine** in renal transplant patients. [Severe] Anecdotal
- Azelastine** → see antihistamines, non-sedating
- Azilsartan** → see angiotensin-II receptor antagonists
- Azithromycin** → see macrolides
- Bacillus Calmette-Guérin vaccine** → see live vaccines
- Bacitracin** → see TABLE 2 p. 960 (nephrotoxicity)
- Baclofen** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **baclofen**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Baclofen** is predicted to increase the risk of adverse effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 961
- Baloxavir marboxil**
- ▶ Oral **aluminium hydroxide** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical
- ▶ Oral **antacids** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **calcium salts** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **docusates** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical
- ▶ Oral **iron** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **magnesium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **selenium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **sodium picosulfate** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical
- ▶ Oral **zinc** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- Balsalazide**
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
- Bambuterol** → see beta₂ agonists
- Baricitinib**
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **azathioprine**. [Severe] Theoretical
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **ciclosporin**. Manufacturer advises caution or avoid—consult product literature. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **methotrexate**. [Severe] Study
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **tacrolimus**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
- Basiliximab** → see monoclonal antibodies
- Bazedoxifene**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- Beclometasone** → see corticosteroids
- Bedaquiline** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaronone)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Antifungals, azoles (flucanazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

Bedaquiline (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 962
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bedaquiline**. Avoid or monitor. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

Bee venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Belatacept → see TABLE 15 p. 963 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Belimumab → see monoclonal antibodies

Bemiparin → see low molecular-weight heparins

Bempedoic acid

▶ **Bempedoic acid** increases the exposure to **statins (pravastatin)**. [Moderate] Study

▶ **Bempedoic acid** increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 147. [Moderate] Study

Bendamustine → see alkylating agents

Bendroflumethiazide → see thiazide diuretics

Benperidol → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961

▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 961

Benzathine benzylpenicillin → see penicillins

Benzodiazepines → see TABLE 11 p. 962 (CNS depressant effects)

alprazolam • chlordiazepoxide • clobazam • clonazepam • diazepam • flurazepam • loprazepam • lorazepam • lormetazepam • midazolam • nitrazepam • oxazepam • remimazolam • temazepam

- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (stiripentol)** increase the concentration of **clobazam**. [Severe] Study
- ▶ **Chlordiazepoxide** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ Benzodiazepines (**clobazam, clonazepam**) potentially affect the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Bertrastat** moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cabozantinib** is predicted to increase the exposure to **midazolam**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Cannabidiol** increases the exposure to the active metabolite of **clobazam** and **clobazam** increases the exposure to the active metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Cenobamate** might increase the concentration of **clobazam**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Cenobamate** moderately decreases the exposure to **midazolam**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Entrectinib** slightly increases the exposure to **midazolam**. [Mild] Study
 - ▶ **Fedratinib** moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to benzodiazepines (**diazepam**, **flurazepam**). Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
 - ▶ **Idealisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
 - ▶ **Idealisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Larotrectinib** slightly increases the exposure to **midazolam**. Use with caution and adjust dose. [Mild] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lorlatinib** moderately decreases the exposure to **midazolam**. Avoid. [Moderate] Study
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to benzodiazepines (**alprazolam**, **diazepam**, **midazolam**). Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **alprazolam**. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** slightly increase the exposure to **midazolam**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **alprazolam**. [Moderate] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of benzodiazepines (**clonazepam**, **diazepam**, **flurazepam**). Avoid. [Severe] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **midazolam**. Avoid or adjust dose. [Severe] Theoretical
 - ▶ **NRRTs (efavirenz)** are predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
 - ▶ **NRRTs (efavirenz, nevirapine)** are predicted to decrease the concentration of **alprazolam**. [Moderate] Theoretical
 - ▶ **NRRTs (etravirine)** have been reported to increase the concentration of **clobazam**. [Moderate] Anecdotal
 - ▶ **NRRTs (etravirine)** are predicted to increase the exposure to **diazepam**. Avoid. [Severe] Theoretical
 - ▶ **NRRTs (nevirapine)** are predicted to decrease the concentration of **clonazepam** and **clonazepam** is predicted to decrease the concentration of **NRRTs (nevirapine)**. [Moderate] Theoretical
 - ▶ **NRRTs (nevirapine)** decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
 - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **chlordiazepoxide**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **diazepam**. Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** increase the clearance of benzodiazepines (**lorazepam**, **nitrazepam**). [Moderate] Study
 - ▶ **Rucaparib** slightly increases the exposure to **midazolam**. Monitor and adjust dose. [Severe] Study
 - ▶ **Sotorasib** moderately decreases the exposure to **midazolam**. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
 - ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **alprazolam**. Adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study
 - ▶ **St John's wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
 - ▶ **St John's wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study
 - ▶ **Tucatinib** markedly increases the exposure to **midazolam**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Vemurafenib** slightly to moderately decreases the exposure to **midazolam**. [Moderate] Study
- Benzylamine** → see NSAIDs
Benzylpenicillin → see penicillins
Bertralstat
- ▶ **Bertralstat** is predicted to increase the concentration of **aliskiren**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **bertralstat**. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the concentration of **bertralstat**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **bertralstat**. [Severe] Study
 - ▶ **Bertralstat** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. Monitor and adjust dose. [Moderate] Study

Berotrastat (continued)

- ▶ **Berotrastat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** moderately increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **colchicine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** might decrease the efficacy of **desogestrel**-containing contraceptives. Use alternatives to desogestrel-only contraceptives. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the exposure to **eliglustat**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eltrombopag** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **ergotamine**. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **factor XA inhibitors (edoxaban, rivaroxaban)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **berotrastat**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of **loperamide**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Berotrastat** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the exposure to **pimozide**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **berotrastat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the concentration of **berotrastat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **talazoparib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **taxanes (docetaxel, paclitaxel)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Berotrastat** is predicted to increase the exposure to **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [\[Moderate\]](#) Study

- ▶ **Berotrastat** is predicted to increase the concentration of **topotecan**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **berotrastat**. [\[Severe\]](#) Study

Beta blockers, non-selective → see TABLE 6 p. 961 (bradycardia), TABLE 6 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation)

carvedilol · labetalol · levobunolol · nadolol · pindolol · propranolol · sotalol · timolol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **levobunolol** and **timolol**, the possibility of interactions should be borne in mind.

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 961 → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular adverse effects when given with **propranolol**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 961
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [\[Severe\]](#) Anecdotal → Also see TABLE 6 p. 961
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 961
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid intravenous verapamil. [\[Severe\]](#) Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **sotalol**. [\[Severe\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **propranolol**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study

- ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [Moderate] Study
 - ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical
 - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, non-selective**. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [Moderate] Study
 - ▶ **Carvedilol** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **carvedilol**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **propranolol**. Monitor and adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [Moderate] Study
 - ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Severe] Theoretical
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
 - ▶ **Carvedilol** causes a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
 - ▶ **Propranolol** slightly to moderately increases the exposure to **triptans (rizatriptan)**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- Beta blockers, selective** → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension)
- acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol
- ▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
 - ▶ Orange juice greatly decreases the exposure to **celiprolol**.
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
 - ▶ **Anti-androgens (abiraterone)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 961
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **nebivolol** and **nebivolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 961
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
 - ▶ **Berotralstat** is predicted to increase the exposure to **nebivolol**. Adjust dose. [Moderate] Study
 - ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
 - ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid intravenous **verapamil**. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
 - ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. Avoid. [Severe] Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. [Moderate] Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
 - ▶ **Fedratinib** moderately increases the exposure to **metoprolol**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Fedratinib** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Givosiran** is predicted to increase the exposure to **nebivolol**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Grapefruit** juice greatly decreases the exposure to **celiprolol**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
 - ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **nebivolol**. [Moderate] Theoretical
 - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
 - ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
 - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, selective**. [Moderate] Study
 - ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Panobinostat** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [Mild] Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **celiprolol**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
 - ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Moderate] Theoretical
 - ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
 - ▶ **Vaborbactam** is predicted to increase the concentration of **metoprolol**. [Unknown] Theoretical
- Beta₂ agonists** → see TABLE 17 p. 964 (reduced serum potassium)
- bambuterol · formoterol · indacaterol · olodaterol · salbutamol · salmeterol · terbutaline · vilanterol
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **salmeterol**. Avoid or monitor. [Moderate] Study

Beta₂ agonists (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta₂ agonists** (high-dose). [\[Moderate\]](#) Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **salmeterol**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. A. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Beta₂ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [\[Moderate\]](#) Anecdotal
- ▶ **Beta₂ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. [\[Severe\]](#) Theoretical
- ▶ **MAOs, irreversible** are predicted to increase the risk of cardiovascular adverse effects when given with **beta₂ agonists**. [\[Moderate\]](#) Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **salmeterol**. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **salmeterol**. Avoid. [\[Severe\]](#) Theoretical

Betahistine

- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical

Betamethasone → see corticosteroids

Betaxolol → see beta blockers, selective

Bevacizumab → see monoclonal antibodies

Bexarotene → see retinoids

Bezafibrate → see fibrates

Bicalutamide → see anti-androgens

Bictegravir

- ▶ Oral **antacids** decrease the exposure to oral **bictegravir**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **bictegravir**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** moderately increase the exposure to **bictegravir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical

- ▶ Oral **iron** decreases the exposure to oral **bictegravir**. Manufacturer advises bictegravir should be taken 2 hours before iron. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** slightly increases the exposure to **metformin**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** is predicted to increase the exposure to **opioids (methadone)**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifabutin)** slightly decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical

Bilastine → see antihistamines, non-sedating

Bimekizumab → see monoclonal antibodies

Bismuth

- ▶ **Bismuth** subsalicylate is predicted to increase the risk of adverse effects when given with **aspirin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bismuth** subsalicylate is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 960). [\[Moderate\]](#) Theoretical
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Study

Bisoprolol → see beta blockers, selective

Bisphosphonates → see TABLE 2 p. 960 (nephrotoxicity)

alendronate · clodronate · ibandronate · pamidronate · risedronate · zoledronate

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [\[Moderate\]](#) Anecdotal → Also see TABLE 2 p. 960
- ▶ Oral **antacids** decrease the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before antacids. [\[Moderate\]](#) Study
- ▶ Oral **antacids** decrease the absorption of oral **clodronate**. Avoid antacids for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **ibandronate**. Avoid antacids for at least 6 hours before or 1 hour after **ibandronate**. [\[Moderate\]](#) Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **risedronate**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [\[Moderate\]](#) Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **clodronate**. [\[Severe\]](#) Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronate**. **Alendronate** should be taken at least 30 minutes before calcium salts. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **clodronate**. Avoid calcium salts for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study

- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronate**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **iron** decreases the absorption of oral **clodronate**. **Clodronate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral **iron** is predicted to decrease the absorption of oral **ibandronate**. **Ibandronate** should be taken 1 hour before or 6 hours after iron. [Moderate] Theoretical
- ▶ Oral **iron** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferrioxol)**. [Severe] Theoretical
- ▶ Oral **magnesium** decreases the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before magnesium. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of oral **clodronate**. Avoid magnesium for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronate**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **clodronate**. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before **zinc**. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **clodronate**. Avoid **zinc** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronate**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- Bivalirudin** → see thrombin inhibitors
- ▶ **Bleomycin** → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Platinum compounds (cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 963
- Binatumomab** → see monoclonal antibodies
- Bortezomib** → see TABLE 8 p. 961 (hypotension), TABLE 15 p. 963 (myelosuppression), TABLE 12 p. 963 (peripheral neuropathy)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 963
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study
- Bosentan** → see endothelin receptor antagonists
- Bosutinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)**-containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **bosutinib**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Letermovir** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical

Bosutinib (continued)

- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
 - ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- Botulinum toxin type A** → see botulinum toxins
Botulinum toxin type B → see botulinum toxins
Botulinum toxins → see TABLE 20 p. 964 (neuromuscular blocking effects)

botulinum toxin type A · botulinum toxin type B

Bowel cleansing preparations

SEPARATION OF ADMINISTRATION Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption might be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

Brentuximab vedotin → see monoclonal antibodies

Brigatinib → see TABLE 6 p. 961 (bradycardia)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Cobicistat** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Brigatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
 - ▶ **Brigatinib** potentially decreases the concentration of **opioids (alfentanil, fentanyl)**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
 - ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
 - ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical
- Brimonidine** → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

Brinzolamide

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **brinzolamide**, the possibility of interactions should be borne in mind.

Brivaracetam → see antiepileptics

Brodalumab → see monoclonal antibodies

Bromfenac → see NSAIDs

Bromocriptine → see dopamine receptor agonists

Buclicine → see antihistamines, sedating

Budesonide → see corticosteroids

Bumetanide → see loop diuretics

Bupivacaine → see anaesthetics, local

Buprenorphine → see opioids

Bupropion

▶ **Alpelisib** is predicted to decrease the efficacy of **bupropion**. [Mild] Theoretical

▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study

▶ **Antiepileptics (valproate)** increase the exposure to **bupropion**. [Severe] Study

▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **bupropion**. Adjust dose. [Moderate] Study

▶ **Bupropion** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 277. [Moderate] Study

▶ **Bupropion** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study

▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study

▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study

▶ **Bupropion** increases the risk of adverse effects when given with **dopamine receptor agonists (amantadine)**. [Moderate] Study

▶ **Bupropion** might enhance the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 963). [Severe] Anecdotal

▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

▶ **Bupropion** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical

▶ **Bupropion** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **bupropion**. [Moderate] Study

▶ **Bupropion** increases the risk of adverse effects when given with **levodopa**. [Moderate] Study

▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal

- ▶ **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAO-B inhibitors**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
 - ▶ **Midostaurin** moderately decreases the exposure to the active metabolite of **bupropion**. [\[Moderate\]](#) Study
 - ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **moclobemide**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **bupropion**. [\[Moderate\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz)** are predicted to decrease the exposure to **bupropion**. [\[Moderate\]](#) Study
 - ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [\[Moderate\]](#) Theoretical
 - ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [\[Severe\]](#) Study
 - ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bupropion**. [\[Moderate\]](#) Study
 - ▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [\[Moderate\]](#) Theoretical
 - ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
 - ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study
 - ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
 - ▶ **Vemurafenib** is predicted to decrease the concentration of **bupropion**. [\[Moderate\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- Bupirone**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **bupirone**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [\[Severe\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Grapefruit** juice increases the exposure to **bupirone**. Avoid. [\[Mild\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Bupirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose. [\[Severe\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Bupirone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ **Mitotane** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bupirone**. [\[Moderate\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
 - ▶ **Tucatinib** is predicted to increase the exposure to **bupirone**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- Busulfan** → see alkylating agents
- Cabazitaxel** → see taxanes
- Cabergoline** → see dopamine receptor agonists
- Cabotegravir**
- ▶ Oral **antacids** are predicted to decrease the concentration of oral **cabotegravir**. **Cabotegravir** should be taken 4 hours before or 2 hours after antacids. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** might decrease the concentration of **cabotegravir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins (rifabutin)** have been reported to cause a small decrease in the exposure to **cabotegravir**. Avoid intramuscular **cabotegravir**. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** modestly decrease the exposure to **cabotegravir**. Avoid. [\[Severe\]](#) Study
- Cabozantinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Cabozantinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study
 - ▶ **Cabozantinib** might affect the effects of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **cabozantinib**. [\[Moderate\]](#) Study
 - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical

Cabozantinib (continued)

- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p.960) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p.963
- ▶ **Letermovir** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ **Mitotand** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p.963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, neupitant)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p.963 → Also see TABLE 9 p.962
- ▶ **NNR1s (efavirenz, nevirapine)** are predicted to decrease the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study

Caffeine citrate

- ▶ **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mid] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Lefunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly decrease the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Terflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

Calcipotriol → see vitamin D substances

Calcitonins

- ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [Moderate] Study

Calcitriol → see vitamin D substances

Calcium acetate → see calcium salts

Calcium carbonate → see calcium salts

Calcium channel blockers → see TABLE 6 p.961 (bradycardia), TABLE 8 p.961 (hypotension)

amlodipine · diltiazem · felodipine · lacidipine · lercanidipine · nicardipine · nifedipine · nimodipine · verapamil

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study → Also see TABLE 8 p.961
- ▶ **Verapamil** moderately increases the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p.961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical → Also see TABLE 8 p.961
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p.961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the exposure to **antiarrhythmics (dronedarone)** and **antiarrhythmics (dronedarone)** increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study → Also see TABLE 6 p.961
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. [Severe] Anecdotal → Also see TABLE 6 p.961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p.961
- ▶ **Antiepileptics (valproate)** increase the exposure to **nimodipine**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Diltiazem** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Verapamil** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **verapamil**. [Severe] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) potentially increase the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **diltiazem**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with calcium channel blockers. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Verapamil** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Verapamil** increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid intravenous **verapamil**, p. 122. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Verapamil** increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid intravenous **verapamil**, p. 122. [Severe] Study → Also see TABLE 6 p. 961 → Also see TABLE 8 p. 961
- ▶ **Verapamil** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bupirofen**. Use with caution and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ **Canomate** is predicted to decrease the exposure to calcium channel blockers (**felodipine, lercanidipine**). Adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. [Severe] Study
- ▶ **Nicardipine** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ Calcium channel blockers (**nifedipine, nimodipine**) might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Crizotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Anecdotal
- ▶ **Diltiazem** is predicted to increase the exposure to **darifenacin**. [Moderate] Study

Calcium channel blockers (continued)

- ▶ **Verapamil** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Verapamil** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mild] Study
- ▶ **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Diltiazem** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to calcium channel blockers (**nifedipine, verapamil**). Avoid. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **felodipine**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice increases the exposure to **nicardipine**. [Mild] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **H₂ receptor antagonists (cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **verapamil**. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to calcium channel blockers (**diltiazem, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elxacaftor p. 206. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**) in pregnant women. [Severe] Anecdotal
- ▶ **Mexiletine** increases the risk of cardiovascular adverse effects when given with **diltiazem**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **verapamil**. Avoid or monitor. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **diltiazem**. [Severe] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to calcium channel blockers. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust naloxegol dose and monitor adverse effects. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)** and **neurokinin-1 receptor antagonists (aprepitant)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of calcium channel blockers. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Verapamil** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust avanafil dose. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Verapamil** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **nifedipine**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** greatly decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **roxolitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 961
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust dapoxetine dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical

Calcium channel blockers (continued)

- ▶ **Diltiazem** slightly increases the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Verapamil** is predicted to slightly to moderately increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Amlodipine** slightly increases the exposure to **statins** (**simvastatin**). Adjust **simvastatin** dose, p. 147. [\[Mild\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) moderately increase the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **felodipine**) very slightly increase the exposure to **talazoparib**. [\[Moderate\]](#) Study
- ▶ **Verapamil** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **taxanes** (**cabazitaxel**). [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **taxanes** (**docetaxel**). [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **taxanes** (**paclitaxel**). [\[Moderate\]](#) Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of and the risk of angioedema when given with **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 206 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [\[Severe\]](#) Study
- ▶ **Verapamil** increases the exposure to **thrombin inhibitors** (**dabigatran**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Verapamil** might increase the exposure to **tigecycline**. [\[Mild\]](#) Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [\[Moderate\]](#) Study
- ▶ **Verapamil** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Verapamil** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **vemurafenib**. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **zopiclone**. [\[Moderate\]](#) Study

Calcium chloride → see calcium salts

Calcium gluconate → see calcium salts

Calcium lactate → see calcium salts

Calcium phosphate → see calcium salts

Calcium salts

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

SEPARATION OF ADMINISTRATION **Calcium carbonate-containing antacids** should preferably not be taken at the same time as other drugs since they might impair absorption. **Antacids** might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral **calcium carbonate** -containing antacids modestly decreases the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **alkylating agents** (**estramustine**). [\[Severe\]](#) Study
- ▶ **Calcium carbonate** might decrease the absorption of **antimalarials** (**chloroquine**). Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **antimalarials** (**proguanil**). Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates** (**alendronate**). **Alendronate** should be taken at least 30 minutes before **calcium salts**. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates** (**clodronate**). Avoid **calcium salts** for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **bisphosphonates** (**ibandronate**). Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronate**. [\[Moderate\]](#) Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates** (**risedronate**). Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium carbonate**-containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [\[Moderate\]](#) Theoretical
- ▶ **Cephalosporins** (**ceftriaxone**) increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Cephalosporins** (**ceftriaxone**) increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Oral **calcium carbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Intravenous **calcium salts** increase the effects of **digoxin**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [\[Severe\]](#) Study
- ▶ Oral **calcium carbonate**-containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ Oral **calcium carbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **hydroxychloroquine**. [\[Moderate\]](#) Theoretical
- ▶ Oral **calcium carbonate** decreases the absorption of oral **iron**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron**. [\[Moderate\]](#) Study
- ▶ Oral **calcium carbonate**-containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Calcium carbonate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [\[Moderate\]](#) Theoretical

- ▶ Oral **calcium carbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
 - ▶ Oral **calcium carbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Oral **calcium carbonate** -containing antacids are predicted to decrease the exposure to oral **NNRTIs (rilpivirine)**. Rilpivirine should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
 - ▶ Oral **calcium carbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
 - ▶ **Calcium carbonate** decreases the absorption of **quinolones (ciprofloxacin)**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Calcium carbonate** greatly decreases the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
 - ▶ **Calcium acetate** minimally decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after calcium acetate. [Moderate] Study
 - ▶ Oral **calcium carbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
 - ▶ Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Calcium carbonate** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
 - ▶ Oral **calcium salts** are predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Anecdotal
 - ▶ **Calcium carbonate** is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
 - ▶ Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study
- Canagliflozin** → see sodium glucose co-transporter 2 inhibitors
- Canakinumab** → see monoclonal antibodies
- Candesartan** → see angiotensin-II receptor antagonists
- Cangrelor** → see TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Selumetinib** might increase the risk of bleeding when given with **cangrelor**. [Severe] Theoretical
- Cannabidiol** → see TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **antiepileptics (valproate)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Cannabidiol** increases the exposure to the active metabolite of benzodiazepines (**clobazam**) and benzodiazepines (**clobazam**) increase the exposure to the active metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Cobicistat** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
 - ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- Capecitabine** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study
 - ▶ **Capecitabine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
 - ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [Severe] Theoretical
- Caplacizumab**
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
 - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- Capreomycin** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 19 p. 964 (ototoxicity)
- Captopril** → see ACE inhibitors
- Carbamazepine** → see antiepileptics
- Carbapenems**
- ertapenem • imipenem • meropenem
- ▶ **Carbapenems** decrease the concentration of **antiepileptics (valproate)**. Avoid. [Severe] Anecdotal
 - ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
 - ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
- Carbidopa**
- ▶ Oral **iron** is predicted to decrease the exposure to oral **carbidopa**. [Moderate] Theoretical
- Carbimazole**
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Carbimazole** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical
 - ▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- Carboplatin** → see platinum compounds
- Carfilzomib** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Carfilzomib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- Cariprazine** → see antipsychotics, second generation
- Carmustine** → see alkylating agents
- Carvedilol** → see beta blockers, non-selective
- Caspofungin**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 429. [Moderate] Theoretical
 - ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
 - ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 429. [Moderate] Theoretical

Caspofungin (continued)

- ▶ **NNRTIs (efavirenz)** are predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 429. [Moderate] Study

Cefaclor → see cephalosporins

Cefadroxil → see cephalosporins

Cefalexin → see cephalosporins

Cefazolin → see cephalosporins

Cefepime → see cephalosporins

Cefiderocol → see cephalosporins

Cefixime → see cephalosporins

Cefotaxime → see cephalosporins

Cefoxitin → see cephalosporins

Cefradine → see cephalosporins

Ceftaroline → see cephalosporins

Ceftazidime → see cephalosporins

Ceftobiprole → see cephalosporins

Ceftolozane → see cephalosporins

Ceftriaxone → see cephalosporins

Cefuroxime → see cephalosporins

Celecoxib → see NSAIDs

Celiprolol → see beta blockers, selective

Cemiplimab → see monoclonal antibodies

Cenobamate → see TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Cenobamate** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** might increase the exposure to **antiepileptics (fosphenytoin, primidone)**. [Moderate] Theoretical → Also see TABLE 11 p. 962

- ▶ **Cenobamate** is predicted to decrease the concentration of **antiepileptics (lamotrigine)** and **antiepileptics (lamotrigine)** might affect the efficacy of **cenobamate**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ **Cenobamate** slightly increases the exposure to **antiepileptics (phenobarbital, phenytoin)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ **Cenobamate** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962

- ▶ **Cenobamate** might increase the concentration of **benzodiazepines (clobazam)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962

- ▶ **Cenobamate** moderately decreases the exposure to **benzodiazepines (midazolam)**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ **Cenobamate** is predicted to decrease the exposure to **beta₂ agonists (salmeterol)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **bosutinib**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **bupirone**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **calcium channel blockers (felodipine, lercanidipine)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **cobimetinib**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** might decrease the efficacy of **oral combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **oral corticosteroids (budesonide)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **darifenacin**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **dasatinib**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **ibrutinib**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **ivacaftor**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **lomitapide**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **naloxegol**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **opioids (alfentanil)**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962

- ▶ **Cenobamate** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, sildenafil, vardenafil)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** moderately increases the exposure to **proton pump inhibitors (omeprazole)**. Adjust dose. [Moderate] Study

- ▶ **Cenobamate** is predicted to decrease the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **statins (simvastatin)**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **oral temsirolimus**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **ticagrelor**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical

- ▶ **Cenobamate** is predicted to decrease the exposure to **triptans (eletriptan)**. Adjust dose. [Moderate] Theoretical

Cephalosporins → see TABLE 2 p. 960 (nephrotoxicity)

cefaclor · cefadroxil · cefalexin · cefazolin · cefepime · cefiderocol · cefixime · cefotaxime · cefoxitin · cefradine · ceftaroline · ceftazidime · ceftobiprole · ceftolozane · ceftriaxone · cefuroxime

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **cefuoroxyim** unless specified.

- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts (calcium chloride)**. Avoid. [Severe] Anecdotal

- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts (calcium gluconate)**. Avoid. [Severe] Anecdotal

- ▶ Cephalosporins (**cefazolin, ceftriaxone**) potentially increase the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal

- ▶ **Ceftobiprole** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical

- ▶ **Leflunomide** is predicted to increase the exposure to **cefaclor**. [Moderate] Theoretical

- ▶ **Nitisinone** is predicted to increase the exposure to **cefaclor**. [Moderate] Study

- ▶ Cephalosporins (**cefazolin, ceftriaxone**) potentially increase the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal

- ▶ **Ceftobiprole** is predicted to increase the concentration of **statins**. [Moderate] Theoretical

- ▶ **Ceftobiprole** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical

- ▶ **Teriflunomide** is predicted to increase the exposure to **cefaclor**. [Moderate] Study

- ▶ **Ceritinib** → see TABLE 6 p. 961 (bradycardia), TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical

- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 961 → Also see TABLE 9 p. 962

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Ceritinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **coumarins (acenocoumarol)**. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **coumarins (warfarin)**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 961 → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ceritinib**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ceritinib**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study
- ▶ **Idealalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Letermovir** is predicted to increase the exposure to **ceritinib**. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **ceritinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ceritinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
- ▶ **Ceritinib** is predicted to increase the exposure to **phenindione**. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **sulfonylureas (glimepiride)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Ceritinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Certolizumab pegol** → see monoclonal antibodies
- ▶ **Certirizine** → see antihistamines, non-sedating
- ▶ **Cetuximab** → see monoclonal antibodies
- ▶ **Chenodeoxycholic acid**
 - ▶ Oral **aluminum hydroxide** decreases the absorption of **chenodeoxycholic acid**. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ Oral **combined hormonal contraceptives** potentially decrease the efficacy of oral **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
 - ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Chloral hydrate** → see TABLE 11 p. 962 (CNS depressant effects)
- ▶ Intravenous **loop diuretics (furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- ▶ **Chlorambucil** → see alkylating agents
- ▶ **Chloramphenicol**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

 - ▶ **Antiepileptics (phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. [Moderate] Study
 - ▶ Intravenous **chloramphenicol** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] theoretical
 - ▶ **Chloramphenicol** decreases the efficacy of **iron**. [Moderate] Anecdotal
 - ▶ **Rifamycins (rifampicin)** decrease the concentration of **chloramphenicol**. [Moderate] Study
 - ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
 - ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- ▶ **Chlordiazepoxide** → see benzodiazepines
- ▶ **Chlormethine**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Chlorprocaine** → see TABLE 11 p. 962 (CNS depressant effects)

Chlorprocaine (continued)

- ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **antiarrhythmics** (**amiodarone**, **dronedarone**, **vernakalant**). [Severe] Theoretical
- ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers**, **non-selective** (**sotalol**). [Severe] Theoretical
- ▶ **Chlorprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical

Chloroquine → see antimalarials

Chlorothiazide → see thiazide diuretics

Chlorphenamine → see antihistamines, sedating

Chlorpromazine → see phenothiazines

Chlorthalidone → see thiazide diuretics

Cholera vaccine

- ▶ **Antimalarials** (**chloroquine**) decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical

Cholic acid

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ **Antiepileptics** (**phenobarbital**) decrease the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study

Choline salicylate

- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study

Ciclesonide → see corticosteroids

Ciclosporin → see TABLE 2 p. 960 (nephrotoxicity), TABLE 16 p. 964 (increased serum potassium)

- ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Abrocitinib** might increase the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 964
- ▶ **Ciclosporin** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **anthracyclines** (**daunorubicin**, **doxorubicin**, **epirubicin**, **idarubicin**, **mitoxantrone**). [Severe] Study
- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiarrhythmics** (**amiodarone**) increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics** (**oxcarbazepine**) decrease the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antifungals**, azoles (**miconazole**) increase the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **ciclosporin**. Manufacturer advises caution or avoid—consult product literature. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **berotralstat**. [Severe] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **beta blockers**, **non-selective** (**nadolol**). [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Calcium channel blockers** (**nifedipine**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **calcium channel blockers** (**lercanidipine**). Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Ciclosporin** causes a small decrease in the exposure to **eltrombopag**. Monitor platelet count and adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists** (**bosentan**) moderately decrease the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **endothelin receptor antagonists** (**bosentan**). Avoid. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **endothelin receptor antagonists** (**ambrisentan**). Adjust **ambrisentan** dose. [Moderate] Study
- ▶ **Entrectinib** is predicted to increase the exposure to **ciclosporin**. [Mild] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **factor XA inhibitors** (**apixaban**). [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **factor XA inhibitors** (**edoxaban**). Adjust **edoxaban** dose. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **factor XA inhibitors** (**rivaroxaban**). [Moderate] Study
- ▶ **Fibrates** (**bezafibrate**) are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fibrates** (**fenofibrate**) increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study

- ▶ **Grapefruit** juice increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **ciclosporin**. [Mild] Study
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idealisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Iron chelators (dextrazoxane)** might increase the risk of immunosuppression when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- ▶ **Ciclosporin** might increase the concentration of **lapatinib**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** greatly increase the exposure to **ciclosporin**. Avoid or monitor. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Metreleptin** might alter the exposure to **ciclosporin**. Monitor concentration and adjust dose. [Severe] Theoretical
- ▶ **Midostaurin** might increase the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz)** decrease the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **NSAIDs (diclofenac)**. [Severe] Study → Also see TABLE 2 p. 960 → Also see TABLE 16 p. 964
- ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 588. [Severe] Anecdotal
- ▶ **Olaparib** might alter the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **ricoglut**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **St John's wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 145. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 960 → Also see TABLE 16 p. 964
- ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 960
- ▶ **Tetracyclines (doxycycline)** are predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

Ciclesporin (continued)

- ▶ **Ursodeoxycholic acid** affects the concentration of ciclesporin. Use with caution and adjust dose. [Severe] Anecdotal
- ▶ **Ciclesporin** might affect the exposure to **vemurafenib** . [Severe] Theoretical
- ▶ **Ciclesporin** is predicted to increase the exposure to **venetoclax** . Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Ciclesporin** might increase the exposure to **vinca alkaloids** . [Severe] Theoretical
- ▶ **Vitamin E substances** affect the exposure to ciclesporin. [Moderate] Study
- ▶ **Ciclesporin** increases the concentration of **voxilaprevir** . Avoid. [Severe] Study

Cidofovir → see TABLE 2 p. 960 (nephrotoxicity)

Cilostazol → see TABLE 4 p. 960 (antiplatelet effects)

GENERAL INFORMATION Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to alter the effects of **cilostazol** . [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol** . [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cilostazol** . Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cilostazol** might increase the exposure to **cladribine** . Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide** . Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Mitotane** is predicted to alter the effects of **cilostazol** . [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol** . [Moderate] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cilostazol** . [Moderate] Theoretical
- ▶ **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to alter the effects of **cilostazol** . [Moderate] Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **cilostazol** . [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol** . Adjust **cilostazol** dose. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **St John's wort** is predicted to alter the effects of **cilostazol** . [Moderate] Theoretical
- ▶ **Cilostazol** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Cilostazol** slightly increases the exposure to **statins (simvastatin)**. [Moderate] Study

Cimetidine → see H₂ receptor antagonists

Cinacalcet

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cinacalcet** . Monitor and adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet** . Monitor and adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine** . Adjust dose. [Severe] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin** . [Mild] Study
 - ▶ **Cinacalcet** might increase the risk of hypocalcaemia when given with **denosumab** . [Severe] Theoretical
 - ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat** . Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide** . Avoid. [Severe] Theoretical
 - ▶ **Cinacalcet** is predicted to increase the exposure to **fesoterodine** . Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Cinacalcet** is predicted to increase the exposure to **gefitinib** . [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine** . [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet** . Monitor and adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
 - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant** . Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cinacalcet** . Monitor and adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **cinacalcet** . Adjust dose. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen** . Avoid. [Severe] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine** . [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants** . Monitor for toxicity and adjust dose. [Severe] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine** . Monitor and adjust dose. [Moderate] Study
- Cinnarizine** → see antihistamines, sedating
- Ciprofibrate** → see fibrates
- Ciprofloxacin** → see quinolones
- Cisatracurium** → see neuromuscular blocking drugs, non-depolarising
- Cisplatin** → see platinum compounds
- Citalopram** → see SSRIs

Cladribine → see TABLE 15 p. 963 (myelosuppression)

SEPARATION OF ADMINISTRATION Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral cladribine. [Moderate] Theoretical
- ▶ **Calcium channel blockers (nifedipine, nimodipine)** might increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Cilostazol** might increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Dipyridamole** might increase the exposure to cladribine. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** might increase the exposure to cladribine. [Moderate] Theoretical
- ▶ **Lefunomide** is predicted to increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cladribine. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs (sulindac)** might increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical

Clarithromycin → see macrolides

Clavulanate → see TABLE 1 p. 960 (hepatotoxicity)

Clemastine → see antihistamines, sedating

Clindamycin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of clindamycin, the possibility of interactions should be borne in mind.

- ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal

Clobazam → see benzodiazepines

Clofronate → see bisphosphonates

Clofarabine → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with clofarabine. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Clofazimine

- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

Clomethiazole → see TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Alcohol** causes serious, potentially fatal, CNS depression when given with clomethiazole. Avoid. [Severe] Study → Also see TABLE 11 p. 962

- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962

- ▶ **Mitotane** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study

- ▶ **Rifamycins (rifampicin)** decrease the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study

Clomipramine → see tricyclic antidepressants

Clonazepam → see benzodiazepines

Clonidine → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of clonidine. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962

Clopidogrel → see TABLE 4 p. 960 (antiplatelet effects)

- ▶ **Clopidogrel** is predicted to increase the exposure to **anti-androgens (apalutamide)** and **anti-androgens (apalutamide)** are predicted to increase the exposure to the active metabolite of clopidogrel. Avoid or monitor. [Moderate] Study
- ▶ **Clopidogrel** moderately increases the exposure to **anti-androgens (enzalutamide)**. Avoid or adjust enzalutamide dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to decrease the concentration of the active metabolite of clopidogrel. Avoid. [Severe] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** markedly decreases the exposure to clopidogrel. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** might decrease the efficacy of clopidogrel. Avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Severe] Study
- ▶ **Moclobemide** is predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** moderately increase the exposure to the active metabolite of clopidogrel. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose. [Moderate] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with clopidogrel. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 960
- ▶ **Clopidogrel** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 146. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Clopidogrel** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **Clopidogrel** is predicted to increase the exposure to **tucatinib**. Avoid or adjust tucatinib dose. [Severe] Study

Clotrimazole → see antifungals, azoles

Clozapine → see antipsychotics, second generation

Cobicistat

- ▶ **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust abemaciclib dose. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study

- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mild] Study

- ▶ **Cobicistat** potentially increases the concentration of **antiarrhythmics (amiodarone, disopyramide, flecainide, lidocaine)**. [Severe] Theoretical

Cobicistat (continued)

- ▶ Cobicistat very markedly increases the exposure to antiarrhythmics (**dronedaron**). Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to anticholinesterases, centrally acting (**galantamine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to cobicistat. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) are predicted to decrease the concentration of cobicistat. [Severe] Theoretical
- ▶ Cobicistat is predicted to very slightly increase the exposure to antiepileptics (**perampnel**). [Mild] Study
- ▶ Cobicistat is predicted to increase the exposure to antifungals, azoles (**fluconazole, posaconazole**). [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor adverse effects. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to antifungals, azoles (**itraconazole, ketoconazole**). Adjust dose. [Moderate] Theoretical
- ▶ Cobicistat is predicted to affect the exposure to antifungals, azoles (**voriconazole**). Avoid. [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to antihistamines, non-sedating (**mizolastine**). Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to antihistamines, non-sedating (**rupatadine**). Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to increase the concentration of antimalarials (**piperaquine**). [Severe] Theoretical
- ▶ Cobicistat is predicted to slightly increase the exposure to antipsychotics, second generation (**aripiprazole**). Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to antipsychotics, second generation (**risperidone**). Adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ Cobicistat moderately increases the exposure to benzodiazepines (**alprazolam**). Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to markedly to very markedly increase the exposure to benzodiazepines (**midazolam**). Avoid or adjust dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to beta₂ agonists (**salmeterol**). Avoid. [Severe] Study
- ▶ Cobicistat slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **buspiron**. Adjust buspiron dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Cobicistat is predicted to markedly increase the exposure to calcium channel blockers (**lercanidipine**). Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ Cobicistat is predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose. [Severe] Study
- ▶ Cobicistat increases the concentration of **ciclosporin**. [Severe] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose. [Moderate] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to decrease the concentration of the active metabolite of **clopidogrel**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust colchicine dose. [Severe] Study
- ▶ Cobicistat is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to corticosteroids (**beclomethasone**) (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ Cobicistat is predicted to affect the exposure to **coumarins (warfarin)**. [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to cobicistat. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Cobicistat is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Cobicistat very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Cobicistat increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ Cobicistat is predicted to increase the concentration of dopamine receptor agonists (**cabergoline**). [Moderate] Anecdotal
- ▶ Cobicistat is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ Cobicistat is predicted to increase the exposure to **drospironone**. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivaacaftor and elxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to cobicistat. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to endothelin receptor antagonists (**mactentan**). [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 635. [Severe] Study
- ▶ Cobicistat is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical

- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **factor XA inhibitors (apixaban, edoxaban, rivaroxaban)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **fedratinib**. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 260. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust larotrectinib dose, p. 638. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust lorlatinib dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of macrolides (**erythromycin**). [Moderate] Theoretical
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisnone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust olaparib dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust palbociclib dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust panobinostat dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust pazopanib dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust pemigatinib dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust sildenafil dose, p. 131. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study

Cobicicistat (continued)

- ▶ **Cobicicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust ribociclib dose. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** decrease the concentration of **cobicicistat** and **cobicicistat** increases the exposure to **rifamycins (rifabutin)**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **roxulotinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **selpercatinib**. Adjust selpercatinib dose, p. 639. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust dapoxetine dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **sunitinib**. Avoid or adjust sunitinib dose. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **Cobicicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Cobicicistat** moderately increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **tofacinib**. Adjust tofacinib dose, p. 732. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

- ▶ **Cobicicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Cobicicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
- ▶ **Cobicicistat** increases the exposure to **triptans (almotriptan)**. [Mild] Study
- ▶ **Cobicicistat** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

Cobimetinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaronne)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **cobimetinib**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- Codeine** → see opioids
- Colchicine**
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **colchicine**. [Mild] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Bertralstat** is predicted to increase the concentration of **colchicine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
 - ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **colchicine**. [Moderate] Study
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **colchicine**. Avoid. [Severe] Theoretical
 - ▶ **Olaparib** might increase the exposure to **colchicine**. [Moderate] Theoretical
 - ▶ **Osimertinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Pemigatinib** might increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Sotorasib** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Colchicine** has been reported to cause rhabdomyolysis when given with **statins**. [Severe] Anecdotal
 - ▶ **Tepotinib** is predicted to increase the concentration of **colchicine**. [Severe] Study
 - ▶ **Tucatinib** is predicted to increase the exposure to **colchicine**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Severe] Study
- Colecalciferol** → see vitamin D substances
- Colesevelam**
- SEPARATION OF ADMINISTRATION Manufacturer advises take 4 hours before, or after, other drugs.
- Colestipol**
- SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.
- Colestyramine**
- SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.
- Colistimethate** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 20 p. 964 (neuromuscular blocking effects)
- Combined hormonal contraceptives**
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Study
 - ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)** and **antiepileptics (lamotrigine)** might

Combined hormonal contraceptives (continued)

- decrease the efficacy of combined hormonal contraceptives. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** increases the concentration of antipsychotics, second generation (**clozapine**). Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to antipsychotics, second generation (**olanzapine**). Adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **Brigatinib** is predicted to decrease the exposure to combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Cabozantinib** might affect the effects of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Carfilzomib** potentially decreases the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Cenobamate** might decrease the efficacy of oral combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ Oral combined hormonal contraceptives potentially decrease the efficacy of oral **chenodeoxycholic acid**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to decrease the efficacy of combined hormonal contraceptives. Avoid. [\[Severe\]](#) Study
 - ▶ **Dabrafenib** is predicted to decrease the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to dopamine receptor agonists (**ropinirole**). Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Encorafenib** is predicted to affect the exposure to combined hormonal contraceptives. [\[Severe\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [\[Severe\]](#) Study
 - ▶ **Griseofulvin** potentially decreases the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ **HIV-protease inhibitors (atazanavir)** affect the exposure to combined hormonal contraceptives. Adjust dose. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Larotrectinib** potentially decreases the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Oral combined hormonal contraceptives slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to combined hormonal contraceptives. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** slightly increases the exposure to MAO-B inhibitors (**rasagiline**). [\[Moderate\]](#) Study
 - ▶ **Combined hormonal contraceptives** increase the exposure to MAO-B inhibitors (**selegiline**). Avoid. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Metreleptin** might decrease the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Monoclonal antibodies (sarilumab)** potentially decrease the exposure to combined hormonal contraceptives. [\[Severe\]](#) Theoretical
 - ▶ **Neratinib** might affect the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of combined hormonal contraceptives (containing ethinylestradiol). Use additional contraceptive precautions. [\[Moderate\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **NSAIDs (etoricoxib)** increase the exposure to combined hormonal contraceptives. [\[Moderate\]](#) Study
 - ▶ **Olaparib** potentially affects the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to phenothiazines (**chlorpromazine**). [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (**roflumilast**). [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Pitolisant** is predicted to decrease the efficacy of combined hormonal contraceptives. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Ponatinib** might affect the effects of combined hormonal contraceptives. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **riluzole**. [\[Moderate\]](#) Theoretical
 - ▶ **St John's wort** decreases the efficacy of combined hormonal contraceptives. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ **Sugammadex** is predicted to decrease the exposure to combined hormonal contraceptives. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with tetracyclines (**minocycline**). [\[Moderate\]](#) Anecdotal
 - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

- ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 324. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. [Severe] Study

Corticosteroids → see TABLE 17 p. 964 (reduced serum potassium)

beclometasone · betamethasone · budesonide · ciclesonide · deflazacort · dexamethasone · fludrocortisone · fluticasone · hydrocortisone · methylprednisolone · mometasone · prednisolone · triamcinolone

- ▶ With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
- ▶ Interactions do not generally apply to corticosteroids (except budesonide and fluticasone) used for topical action (including inhalation) unless specified. However, as systemic absorption might occur with **hydrocortisone eye drops**, the possibility of interactions should be borne in mind.
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **deflazacort**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **dexamethasone**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with corticosteroids. [Moderate] Study
- ▶ **Dexamethasone** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dexamethasone** is predicted to decrease the concentration of **caspofungin**. Adjust **caspo**fungin dose, p. 429. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to oral **budesonide**. Adjust dose. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **fluticasone**. Adjust dose. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **corticosteroids**. [Severe] Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **methylprednisolone**. Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone,**

Corticosteroids (continued)

- prednisolone, triamcinolone). Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ Corticosteroids (**betamethasone**, **deflazacort**, **dexamethasone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**) are predicted to decrease the efficacy of **monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **monoclonal antibodies (dinutuximab)**. Avoid except in life-threatening situations. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** moderately increase the exposure to **dexamethasone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to oral **budesonide**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **fluticasone**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** moderately increase the exposure to **dexamethasone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor adverse effects and consider beclometasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Dexamethasone** is predicted to decrease the concentration of **NNRTIs (rilpivirine)**. Avoid multiple-dose dexamethasone. [\[Severe\]](#) Theoretical
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**,

prednisolone, **triamcinolone**). Monitor and adjust dose.

- [\[Moderate\]](#) Study
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal

Coumarins → see TABLE 3 p. 960 (anticoagulant effects)

acenocoumarol · warfarin

FOOD AND LIFESTYLE The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate juice is predicted to increase the INR in response to **acenocoumarol** and **warfarin**.

- ▶ **Alcohol** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Alpelisib** is predicted to decrease the efficacy of **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **coumarins**. Avoid or monitor. [\[Mid\]](#) Study
- ▶ **Anti-androgens (enzalutamide)** potentially decrease the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Capcitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **acenocoumarol**. [\[Severe\]](#) Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **warfarin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Cobicistat** is predicted to affect the exposure to **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Cranberry** juice potentially increases the anticoagulant effect of **warfarin**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical

- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Disulfiram** increases the anticoagulant effect of coumarins. Monitor and adjust dose. [Severe] Study
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Erlotinib** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Fluorouracil** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Fostamatinib** potentially alters the anticoagulant effect of warfarin. [Moderate] Theoretical
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Glucagon** increases the anticoagulant effect of warfarin. [Severe] Study
- ▶ **Glucosamine** potentially decreases the anticoagulant effect of acenocoumarol. [Moderate] Anecdotal
- ▶ **Glucosamine** potentially increases the anticoagulant effect of warfarin. Avoid. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **H₂ receptor antagonists (cimetidine)** increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to warfarin. [Moderate] Theoretical
- ▶ **Ivermectin** potentially increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Leflunomide** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Letermovir** is predicted to decrease the concentration of warfarin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to warfarin. Monitor INR and adjust dose. [Severe] Study
- ▶ **Lorlatinib** is predicted to decrease the exposure to coumarins. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Mercaptopurine** decreases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Metreleptin** might alter the exposure to warfarin. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Mexiletine** potentially affects the exposure to warfarin. Avoid. [Unknown] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to warfarin. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (bimekizumab)** might affect the exposure to warfarin. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to warfarin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to warfarin. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to warfarin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of coumarins. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** decrease the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to affect the concentration of warfarin. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to warfarin. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** are predicted to affect the concentration of coumarins. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (etravirine)** increase the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **NNRTIs (nevirapine)** potentially alter the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Obeticholic acid** decreases the anticoagulant effect of warfarin. [Severe] Study
- ▶ **Oxymetholone** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Paracetamol** increases the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Penicillins** potentially alter the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Pitolisant** is predicted to decrease the exposure to warfarin. [Mild] Theoretical
- ▶ **Quinolones** increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Ranibizumab** increases the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Rifamycins (rifabutin)** might decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Rifaximin** has been reported to decrease the anticoagulant effect of warfarin. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Rucaparib** slightly increases the exposure to warfarin. Monitor and adjust dose. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with coumarins. [Severe] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **St John's wort** decreases the anticoagulant effect of coumarins. Avoid. [Severe] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Sucralfate** potentially decreases the effects of warfarin. Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Sulfonamides (sulfamethoxazole)** increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tamoxifen** increases the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tegafur** increases the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Terflunomide** affects the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tetracyclines** increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Tigecycline** is predicted to alter the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with coumarins. [Severe] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to coumarins. [Moderate] Study

Coumarins (continued)

- ▶ **Venetoclax** slightly increases the exposure to **warfarin**.

[Moderate] Study

Cranberry

- ▶ **Cranberry** juice potentially increases the anticoagulant effect of coumarins (**warfarin**). Avoid. [Severe] Anecdotal

Crisantaspase → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)

- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinitib**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963

Crizotinib → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)

GENERAL INFORMATION Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.

- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 6 p. 961 → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 961 → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **elxacaftor**. Adjust **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical → Also see TABLE 6 p. 961
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Letermovir** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** potentially decreases the exposure to **pibrantasvir**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 961
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (pravastatin)**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962

Crizotinib (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**.

Adjust dose. [Moderate](#) Study

Cyclizine → see antihistamines, sedating**Cyclopentolate** → see TABLE 10 p.962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **cyclopentolate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe](#) Theoretical → Also see TABLE 10 p.962

Cyclophosphamide → see alkylating agents**Cycloserine**

- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate](#) Study

Cyproheptadine → see antihistamines, sedating**Cyproterone** → see anti-androgens**Cytarabine** → see TABLE 15 p.963 (myelosuppression)

- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe](#) Study

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. UKHSA advises avoid (refer to Green Book). [Severe](#) Theoretical

Cytomegalovirus immunoglobulin → see immunoglobulins**Dabigatran** → see thrombin inhibitors**Dabrafenib**

- ▶ **Dabrafenib** is predicted to decrease the exposure to **acalabrutinib**. [Severe](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **axitinib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cabozantinib**. [Moderate](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ceritinib**. [Severe](#) Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dasatinib**. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **digoxin**. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dolutegravir**. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the effects of **ergotamine**. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **erlotinib**. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate](#) Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **dabrafenib**. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **imatinib**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ivacaftor**. [Moderate](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **dabrafenib**. [Moderate](#) Study

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **midostaurin**. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
 - ▶ **Dabrafenib** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **phenindione**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ponatinib**. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **regorafenib**. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **selpercatinib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Dacarbazine** → see alkylating agents
- Dacomitinib**
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **atomoxetine**. Avoid or adjust dose. [Severe] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, non-selective (propranolol)**. Avoid. [Severe] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. Avoid. [Severe] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. **Dacomitinib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Mild] Study
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. [Moderate] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
 - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [Severe] Study
- Dactinomycin** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Dalteparin** → see low molecular-weight heparins
- Danaparoid** → see TABLE 3 p. 960 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- Dantrolene** → see TABLE 1 p. 960 (hepatotoxicity)
- ▶ Intra venous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Anecdotal
- Dapagliflozin** → see sodium glucose co-transporter 2 inhibitors
- Dapoxetine** → see SSRIs
- Dapsone**
- ▶ **Aminosalicic acid** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
 - ▶ **Dapsone** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
 - ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical

Dapstone (continued)

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with **dapstone**. [Severe] Theoretical
 - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinemia when given with **dapstone**. [Severe] Theoretical
 - ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **dapstone**. [Severe] Theoretical
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapstone**. [Severe] Theoretical
 - ▶ **Rifamycins** decrease the exposure to **dapstone**. [Moderate] Study
 - ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinemia when given with **dapstone**. [Severe] Theoretical
 - ▶ **Dapstone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapstone**. [Severe] Study
- Daptomycin**
- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
 - ▶ **Ciclopurin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
 - ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
 - ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
 - ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- Daratumumab** → see monoclonal antibodies
- Darbepoetin alfa** → see TABLE 5 p. 961 (thromboembolism), TABLE 16 p. 964 (increased serum potassium)
- Darifenacin** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Darifenacin** is predicted to increase the concentration of antiarrhythmics (**flecainide**). [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **darifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
 - ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **darifenacin**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ciclopurin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **darifenacin**. [Mild] Study

- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **Darifenacin** (high-dose) is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 10 p. 962
 - ▶ **Tucatinib** is predicted to increase the exposure to **darifenacin**. Avoid or adjust dose. [Moderate] Theoretical
- Darolutamide** → see anti-androgens
- Darunavir** → see HIV-protease inhibitors
- Dasatinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Oral antacids** decrease the absorption of oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
 - ▶ **Oral calcium salts (calcium carbonate)** containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **dasatinib**. Adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dasatinib**. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Letermovir** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, nupitant)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dasatinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Oral sodium bicarbonate**—containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Dasatinib** is predicted to increase the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Theoretical
- Daunorubicin** → see anthracyclines
- Decitabine** → see TABLE 15 p. 963 (myelosuppression)
- Deferasirox** → see iron chelators
- Deferiprone** → see iron chelators
- Deflazacort** → see corticosteroids
- Delafloxacin** → see quinolones
- Delamanid** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **delamanid**. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- Demeclocycline** → see tetracyclines
- Denosumab**
 - ▶ **Cinacalcet** might increase the risk of hypocalcaemia when given with **denosumab**. [\[Severe\]](#) Theoretical
 - ▶ **Etelcalcetide** might increase the risk of hypocalcaemia when given with **denosumab**. [\[Severe\]](#) Theoretical
 - Desferrioxamine** → see iron chelators
 - Desflurane** → see volatile halogenated anaesthetics
 - Desloratadine** → see antihistamines, non-sedating
 - Desmopressin** → see TABLE 18 p. 964 (hyponatraemia)
 - ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical
 - ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [\[Moderate\]](#) Study
 - ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical
 - Desogestrel**
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [\[Moderate\]](#) Study
 - ▶ **Berotralstat** might decrease the efficacy of **desogestrel**-containing contraceptives. Use alternatives to **desogestrel**-only contraceptives. [\[Severe\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **St John's wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
 - ▶ **Desogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **desogestrel**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - Dexamethasone** → see corticosteroids
 - Dexamfetamine** → see amfetamines
 - Dexketoprofen** → see NSAIDs
 - Dexmedetomidine** → see TABLE 11 p. 962 (CNS depressant effects)
 - Dexrazoxane** → see iron chelators
 - Diamorphine** → see opioids
 - Diazepam** → see benzodiazepines
 - Diazoxide** → see TABLE 8 p. 961 (hypotension)
 - ▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - Diclofenac** → see NSAIDs
 - Dicycloverine** → see TABLE 10 p. 962 (antimuscarinics)
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **dicycloverine**; concurrent use might

increase the risk of developing intestinal obstruction. [\[Severe\]](#)
Theoretical → Also see TABLE 10 p. 962

Dienogest

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Letermovir** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study

Digoxin → see TABLE 6 p. 961 (bradycardia)

- ▶ **Abrociclitinib** might increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Acarbose** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [\[Mild\]](#) Study
- ▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [\[Mild\]](#) Study
- ▶ Oral **antacids** decrease the absorption of oral **digoxin**. Separate administration by 2 hours. [\[Mild\]](#) Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **digoxin**. [\[Mild\]](#) Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [\[Severe\]](#) Study → Also see TABLE 6 p. 961
- ▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 6 p. 961
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [\[Severe\]](#) Study

- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [\[Severe\]](#) Anecdotal
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 6 p. 961
- ▶ **Intravenous calcium salts** increase the effects of **digoxin**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 961
- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 961) are predicted to increase the risk of **digoxin** toxicity when given with **digoxin**. [\[Severe\]](#) Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Fostamatinib** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose, p. 86. [\[Moderate\]](#) Study
- ▶ **Glecaprevir** with pibrentasvir increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **digoxin**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Macrolides** increase the concentration of **digoxin**. [\[Severe\]](#) Anecdotal
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Neomycin** decreases the absorption of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Neratinib** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [\[Severe\]](#) Study
- ▶ **Olaparib** might increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Pemigatinib** might increase the exposure to **digoxin**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
- ▶ **Pibrentasvir** with glecaprevir increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [\[Mild\]](#) Theoretical
- ▶ **Ranolazine** increases the concentration of **digoxin**. [\[Moderate\]](#) Study

- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Sotorasib** is predicted to increase the exposure to **digoxin**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's wort** decreases the concentration of **digoxin**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [\[Severe\]](#) Anecdotal → Also see [TABLE 6 p. 961](#)
- ▶ **Tepotinib** is predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Study
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [\[Moderate\]](#) Study → Also see [TABLE 6 p. 961](#)
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [\[Mild\]](#) Study
- ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Tucatinib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Vandetanib** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [\[Severe\]](#) Study
- ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- Dihydrocodeine** → see opioids
- Diltiazem** → see calcium channel blockers
- Dimenhydrinate** → see [TABLE 10 p. 962](#) (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **dimenhydrinate**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see [TABLE 10 p. 962](#)
- Dimethyl fumarate**
- ▶ **Alcohol** (excessive consumption) potentially increases the risk of gastrointestinal adverse effects when given with **dimethyl fumarate**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Dinutuximab** → see monoclonal antibodies
- Dipeptidylpeptidase-4 inhibitors** → see [TABLE 14 p. 963](#) (antidiabetic drugs)
 - alogliptin · linagliptin · saxagliptin · sitagliptin · vildagliptin
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **linagliptin**. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **linagliptin**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **dipeptidylpeptidase-4 inhibitors**. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Linagliptin** is predicted to increase the exposure to **lomipatide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **linagliptin**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **saxagliptin**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- Diphenoxylate** → see opioids
- Dipipanone** → see opioids
- Dipyridamole** → see [TABLE 8 p. 961](#) (hypotension), [TABLE 4 p. 960](#) (antiplatelet effects)
- ▶ **Oral antacids** are predicted to decrease the absorption of oral **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Dipyridamole** might increase the exposure to **cladribine**. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **dipyridamole**. [\[Moderate\]](#) Theoretical
- Diroximel fumarate**
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **diroximel fumarate**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- Disopyramide** → see antiarrhythmics
- Disulfiram** → see [TABLE 12 p. 963](#) (peripheral neuropathy)
- ▶ **Alcohol** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [\[Severe\]](#) Study
- ▶ **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 12 p. 963](#)
- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study

Disulfiram (continued)

- ▶ **Methylphenidate** has been reported to cause psychotic symptoms when given with **disulfiram**. [Severe] Anecdotal
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 963
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical

Dobutamine → see sympathomimetics, inotropic

Docetaxel → see taxanes

Docusates

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **docusates** unless specified.

- ▶ Oral **docusates** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical

Dolutegravir

- ▶ Oral **antacids** decrease the exposure to oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Dolutegravir** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Dolutegravir** might increase the concentration of **fampridine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** (alone or boosted with ritonavir) slightly increase the exposure to **dolutegravir**. Adjust dose—consult product literature. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ Oral **iron** decreases the absorption of oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron. [Moderate] Study
- ▶ **Dolutegravir** increases the exposure to **metformin**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **NNR1Ts (efavirenz)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **NNR1Ts (etravirine)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 471. [Severe] Study
- ▶ **NNR1Ts (nevirapine)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study

Domperidone → see TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- Donepezil** → see anticholinesterases, centrally acting
- Dopamine** → see sympathomimetics, inotropic
- Dopamine receptor agonists** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 10 p. 962 (antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pramipexole · quinagolide · ropinirole · rotigotine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with 5-HT₃-receptor antagonists (**granisetron, palonosetron**). [Severe] Theoretical
- ▶ **Apomorphine** increases the risk of severe hypotension when given with 5-HT₃-receptor antagonists (**ondansetron**). Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **cabergoline**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Antipsychotics, second generation (amisulpride, olanzapine, paliperidone, quetiapine, risperidone)** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
- ▶ **Antipsychotics, second generation (aripiprazole, clozapine)** are predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 10 p. 962
- ▶ **Antipsychotics, second generation (asenapine)** are predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Axitinib** is predicted to increase the exposure to **ropinirole**. [Moderate] Theoretical
- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Bupropion** increases the risk of adverse effects when given with **amantadine**. [Moderate] Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal → Also see TABLE 8 p. 961
 - ▶ **Cobicistat** increases the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Dolutegravir** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists (**bromocriptine, cabergoline**). [Moderate] Theoretical
 - ▶ Dopamine receptor agonists (**cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961
 - ▶ Dopamine receptor agonists (**amantadine**) are predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
 - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **cabergoline**. Avoid. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine, cabergoline**). Avoid. [Moderate] Theoretical
 - ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Givosiran** is predicted to increase the exposure to **ropinirole**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962 → Also see TABLE 10 p. 962
 - ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Letermovir** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 10 p. 962
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine**). [Moderate] Theoretical
 - ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine**). Avoid. [Moderate] Study
 - ▶ **Mexiletine** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Osilodrostat** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962 → Also see TABLE 10 p. 962
 - ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962 → Also see TABLE 10 p. 962
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
 - ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of adverse effects when given with **bromocriptine**. Avoid. [Severe] Anecdotal
 - ▶ **Trimethoprim** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
- Doravirine** → see NNRTIs
- Dorzolamide**
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **dorzolamide**, the possibility of interactions should be borne in mind.
- Dostarlimab** → see monoclonal antibodies
 - Dosulepin** → see tricyclic antidepressants
 - Doxapram**
 - ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
 - ▶ **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
 - ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
 - Doxazosin** → see alpha blockers
 - Doxepin** → see tricyclic antidepressants
 - Doxorubicin** → see anthracyclines
 - Doxycycline** → see tetracyclines
 - Doxylamine** → see antihistamines, sedating
 - Dronabinol** → see TABLE 11 p. 962 (CNS depressant effects)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

Dronabinol (continued)

to dronabinol. Avoid or adjust dose. [Mid] Study → Also see

TABLE 11 p. 962

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dronabinol. Adjust dose. [Mid] Study
- ▶ **Cobicistat** is predicted to increase the exposure to dronabinol. Adjust dose. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to dronabinol. Adjust dose. [Mid] Study
- ▶ **Idelalisib** is predicted to increase the exposure to dronabinol. Adjust dose. [Mid] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to dronabinol. Adjust dose. [Mid] Study
- ▶ **Mitotane** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mid] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mid] Study

Dronedarone → see antiarrhythmics

Droperidol → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)

▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962

▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 961

Drosiprenone → see TABLE 16 p. 964 (increased serum potassium)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to drosiprenone. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to drosiprenone. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to drosiprenone. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to drosiprenone. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to drosiprenone. [Severe] Study

Drugs that cause serotonin syndrome

▶ **Bupropion** might enhance the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 963). [Severe] Anecdotal

▶ **Opioids (tapentadol)** are predicted to increase the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 963). [Severe] Theoretical

Drugs that reduce serum potassium

▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 964) are predicted to increase the risk of digoxin toxicity when given with **digoxin**. [Severe] Study

Drugs with anticoagulant effects

- ▶ **Bismuth subsalicylate** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 960). [Moderate] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **inotersen**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **monoclonal antibodies (bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical

▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical

▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical

Drugs with antimuscarinic effects

▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 962) decrease the absorption of **levodopa**. [Moderate] Theoretical

Drugs with antiplatelet effects

- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **inotersen**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **monoclonal antibodies (bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical

Dulaglutide → see glucagon-like peptide-1 receptor agonists

Duloxetine → see SNRIs

Dupilumab → see monoclonal antibodies

Durvalumab → see monoclonal antibodies

Dutasteride

- ▶ **Antiarrhythmics (dronedarone)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Letermovir** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study

Eculizumab → see monoclonal antibodies

Edoxaban → see factor Xa inhibitors

Efavirenz → see NNRTIs

Eicosapentaenoic acid → see TABLE 4 p. 960 (antiplatelet effects)

Elbasvir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** with grazoprevir slightly increases the exposure to **statins (atorvastatin)**. Adjust **atorvastatin** dose, p. 145. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **statins (fluvastatin)**. Adjust **fluvastatin** dose, p. 146. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 147. [Moderate] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical

Elotripan → see triptans

Eluxacaftor

- ▶ **Anti-androgens (apalutamide, enzalutamide)** is predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** is predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Eluxacaftor** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical

- ▶ **Eluxacaftor** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eluxacaftor**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Eluxacaftor** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** is predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **eluxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Eluxacaftor** is predicted to increase the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Eluxacaftor** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical

Eliglustat

- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
- ▶ **Anti-androgens (abiraterone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **eliglustat**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, non-selective (propranolol)**. Adjust dose. [Moderate] Study

Eliglustat (continued)

- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Fedratinib** is predicted to increase the exposure to **eliglustat**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Givosiran** is predicted to increase the exposure to **eliglustat**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
 - ▶ **St John's wort** is predicted to increase the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [\[Moderate\]](#) Theoretical
- Elotuzumab** → see monoclonal antibodies
- Eltrombopag**
- ▶ **Eltrombopag** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
 - ▶ Oral **antacids** decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [\[Severe\]](#) Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to **bertrastat**. [\[Severe\]](#) Theoretical
 - ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [\[Severe\]](#) Study
 - ▶ **Ciclosporin** causes a small decrease in the exposure to **eltrombopag**. Monitor platelet count and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Oral **iron** is predicted to decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after iron. [\[Severe\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [\[Mid\]](#) Study
 - ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
 - ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of rifamycins (**rifampicin**). [\[Moderate\]](#) Theoretical
 - ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after selenium. [\[Severe\]](#) Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **eltrombopag**. [\[Moderate\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [\[Moderate\]](#) Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [\[Severe\]](#) Theoretical
 - ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after zinc. [\[Severe\]](#) Theoretical
- Elvitegravir**
- ▶ Oral **antacids** decrease the exposure to oral **elvitegravir**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Study

- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **Dabrafenib** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
 - ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
 - ▶ **Elvitegravir** boosted with ritonavir is predicted to increase the exposure to **midostaurin**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
 - ▶ **Empagliflozin** → see sodium glucose co-transporter 2 inhibitors
 - ▶ **Emtricitabine** → see NRTIs
 - ▶ **Enalapril** → see ACE inhibitors
 - ▶ **Encorafenib** → see TABLE 9 p. 962 (QT-interval prolongation)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
 - ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
 - ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **encorafenib**. Avoid or monitor. [Severe] Theoretical
 - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
 - ▶ **Encorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ### Endothelin receptor antagonists
- ambrisentan · bosentan · macitentan
- ▶ **Bosentan** is predicted to decrease the exposure to **acalabrutinib**. [Severe] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** affect the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **macitentan**. [Moderate] Study
 - ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **bosentan**. [Moderate] Study
 - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the concentration of **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical

Endothelin receptor antagonists (continued)

- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **ceritinib**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose. [Moderate] Study
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elxacaftor** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **midostaurin** and **midostaurin** is predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant, netupitant)**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **bosentan**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (dorarivine)**. Avoid or adjust **dorarivine** or **lamivudine** with **tenofovir disoproxil** and **dorarivine** dose. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (nevirapine)**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
- ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ponatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **regorafenib**. [Severe] Study

- ▶ **Bosentan** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** transiently increase the exposure to **ambrisentan**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** affect the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Roxadustat** is predicted to increase the exposure to **bosentan**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **roxulotinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Bosentan** increases the risk of hepatotoxicity when given with **sulfonyleureas (glibenclamide)**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
- ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ambrisentan**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Enoxaparin** → see low molecular-weight heparins
- Entacapone**
 - ▶ Oral **entacapone** is predicted to decrease the absorption of oral **iron**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Entacapone** increases the exposure to **levodopa**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- Enteral feeds**
 - ▶ **Aluminium hydroxide** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
 - ▶ **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
 - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
 - ▶ **Enteral feeds** decrease the exposure to **quinolones (ciprofloxacin)**. [Moderate] Study
 - ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
 - ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
- Entrectinib** → see TABLE 9 p. 962 (QT-interval prolongation)
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Entrectinib** slightly increases the exposure to **benzodiazepines (midazolam)**. [Mild] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **ciclosporin**. [Mild] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **ergotamine**. [Mild] Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
 - ▶ **Grapefruit** is predicted to increase the exposure to **entrectinib**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Study

Entrectinib (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **entrectinib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **entrectinib**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **Entrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. [\[Mid\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **entrectinib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Entrectinib** is predicted to increase the exposure to **sirolimus**. [\[Mid\]](#) Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **entrectinib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **temsirolimus**. [\[Mid\]](#) Theoretical
- Enzalutamide** → see anti-androgens
- Ephedrine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 961 (thromboembolism), TABLE 16 p. 964 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 961 (thromboembolism), TABLE 16 p. 964 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 961 (thromboembolism), TABLE 16 p. 964 (increased serum potassium)
- Epoprostenol** → see TABLE 8 p. 961 (hypotension), TABLE 4 p. 960 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatid** → see TABLE 3 p. 960 (anticoagulant effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline)**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **ergometrine**. [\[Moderate\]](#) Theoretical
 - ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [\[Severe\]](#) Anecdotal
- Ergotamine**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Bertralstat** is predicted to increase the exposure to **ergotamine**. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
 - ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Entrectinib** is predicted to increase the exposure to **ergotamine**. [Mild] Theoretical
 - ▶ **Fedratinib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Olaparib** might alter the exposure to **ergotamine**. [Moderate] Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Selpercatinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Study
 - ▶ **Sotorasib** is predicted to decrease the exposure to **ergotamine**. Avoid or adjust dose. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
 - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Triptans (almotriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
 - ▶ **Triptans (eletriptan)** increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
 - ▶ **Triptans (frovoatriptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
 - ▶ **Triptans (rizatriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
 - ▶ **Triptans (sumatriptan)** increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
 - ▶ **Triptans (zolmitriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical
- Eribulin** → see TABLE 15 p.963 (myelosuppression), TABLE 12 p.963 (peripheral neuropathy), TABLE 9 p.962 (QT-interval prolongation)
- Erolotinib**
- FOOD AND LIFESTYLE** Dose adjustment may be necessary if smoking started or stopped during treatment.
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **erlotinib**. **Erolotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **erlotinib**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [Severe] Study
 - ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
 - ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **erlotinib**. [Severe] Study
 - ▶ **Antifungals, azoles (flucanazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
 - ▶ **Erolotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **erlotinib**. [Moderate] Study
 - ▶ Oral **calcium salts (calcium carbonate)** -containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erolotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
 - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Erolotinib** is predicted to increase the risk of gastrointestinal perforation when given with **corticosteroids**. [Severe] Theoretical
 - ▶ **Erolotinib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **erlotinib**. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erolotinib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study

Erlotinib (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [\[Severe\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
- ▶ **Osilodrostat** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [\[Severe\]](#) Study
- ▶ **Rucaparib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erlotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study

Ertapenem → see carbapenems

Ertugliflozin → see sodium glucose co-transporter 2 inhibitors

Erythromycin → see macrolides

Escitalopram → see SSRIs

Esketamine → see TABLE 8 p.961 (hypotension), TABLE 11 p.962 (CNS depressant effects)

▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p.962

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study

▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study

▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study

▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study

▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical

Eslicarbazepine → see antiepileptics

Esmolol → see beta blockers, selective

Esomeprazole → see proton pump inhibitors

Estradiol

▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **Modafinil** is predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

▶ **Rifamycins** are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical

Estramustine → see alkylating agents

Etanercept

▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [\[Severe\]](#) Theoretical

▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **etanercept**. Avoid. [\[Severe\]](#) Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

▶ **Monoclonal antibodies (sarilumab)** might cause severe infection and neutropenia when given with **etanercept**. [\[Severe\]](#) Theoretical

Etelcalcetide

▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical

▶ **Etelcalcetide** might increase the risk of hypocalcaemia when given with **denosumab**. [\[Severe\]](#) Theoretical

Ethambutol

▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal

Ethinylestradiol

▶ **Fostemsavir** increases the concentration of **ethinylestradiol** from a combined hormonal contraceptive. Adjust dose—consult product literature. [\[Severe\]](#) Study

Ethosuximide → see antiepileptics

Etodolac → see NSAIDs

Etomidate → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

Etonogestrel

- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampamel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** might decrease the efficacy of subdermal **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ Macrolides (**clarithromycin**) are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **fosaprepitant**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Etonogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical

Etoposide → see TABLE 15 p. 963 (myelosuppression)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **etoposide**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**netupitant**) slightly increase the exposure to **etoposide**. [\[Moderate\]](#) Study

Etoricoxib → see NSAIDs

Etravirine → see NNRTIs

Everolimus

- ▶ **Abrociclitinib** might increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [\[Severe\]](#) Anecdotal

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedronone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Canabamate** is predicted to decrease the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Certinib** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Entrectinib** is predicted to increase the exposure to **everolimus**. [\[Mild\]](#) Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **everolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **everolimus**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **everolimus**. Avoid. [\[Moderate\]](#) Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Mifepristone** is predicted to increase the exposure to **everolimus**. [\[Severe\]](#) Theoretical

Everolimus (continued)

- ▶ **Mirabegron** is predicted to increase the exposure to everolimus. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of everolimus. [Severe] Theoretical
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Olaparib** might increase the exposure to everolimus. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Theoretical
- ▶ **Pemigatinib** might increase the exposure to everolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to everolimus. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to everolimus. Avoid. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of everolimus. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to everolimus. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Severe] Study

Exemestane

- ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **Mitotane** moderately decreases the exposure to exemestane. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to exemestane. [Moderate] Theoretical

Exenatide → see glucagon-like peptide-1 receptor agonists

Ezetimibe

- ▶ **Ciclosporin** moderately increases the exposure to ezetimibe and ezetimibe slightly increases the exposure to ciclosporin. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with ezetimibe. [Severe] Theoretical

Factor XA inhibitors → see TABLE 3 p. 960 (anticoagulant effects)

apixaban · edoxaban · fondaparinux · rivaroxaban

▶ **Abrocitinib** might increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Theoretical

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to apixaban. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** slightly increase the exposure to edoxaban. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** might increase the exposure to rivaroxaban. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to apixaban. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** might increase the exposure to rivaroxaban. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, phenytoin)** are predicted to decrease the exposure to apixaban. Use with caution or avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to edoxaban. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, primidone)** are predicted to decrease the exposure to apixaban. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to rivaroxaban. [Severe] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to apixaban. Use with caution or avoid. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** might increase the risk of bleeding when given with apixaban. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole, voriconazole)** are predicted to increase the exposure to apixaban. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole, voriconazole)** are predicted to increase the exposure to rivaroxaban. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to factor XA inhibitors (apixaban, rivaroxaban). Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to factor XA inhibitors (apixaban, rivaroxaban). Avoid. [Severe] Study
- ▶ **Aspirin (high-dose)** increases the exposure to edoxaban. Avoid. [Severe] Study
- ▶ **Bertralstat** is predicted to increase the concentration of factor XA inhibitors (edoxaban, rivaroxaban). Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to apixaban. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** slightly increase the exposure to edoxaban. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to edoxaban. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to apixaban. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to rivaroxaban. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to factor XA inhibitors (apixaban, edoxaban, rivaroxaban). Avoid. [Severe] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to edoxaban. Adjust dose. [Moderate] Study

- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir are predicted to increase the exposure to **apixaban**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir or cobicistat are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir are predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Anecdotal
 - ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the exposure to factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Theoretical
 - ▶ **Ibrutinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Ivacaftor** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
 - ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **apixaban**. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **rivaroxaban**. [Mild] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **apixaban**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
 - ▶ **Neratinib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Theoretical
 - ▶ **NNRTIs (nevirapine)** are predicted to decrease the exposure to **rivaroxaban**. [Severe] Anecdotal
 - ▶ **Olaparib** might increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Theoretical
 - ▶ **Osimertinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
 - ▶ **Pemigatinib** might increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **edoxaban**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **edoxaban**. [Mild] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **edoxaban**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
 - ▶ **Sotorasib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Avoid or adjust dose. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
 - ▶ **Teptinib** is predicted to increase the concentration of factor XA inhibitors (**edoxaban, rivaroxaban**). [Severe] Study
 - ▶ **Tucatinib** is predicted to increase the exposure to **edoxaban**. Avoid or adjust dose. [Moderate] Theoretical
 - ▶ **Tucatinib** is predicted to increase the exposure to **rivaroxaban**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Vemurafenib** might increase the exposure to **rivaroxaban**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Avoid or adjust dose. [Severe] Study
 - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of **edoxaban**. Avoid. [Severe] Theoretical
- Famciclovir**
- ▶ **Famciclovir** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. [Moderate] Theoretical
- Famotidine** → see H₂ receptor antagonists
- Fampridine**
- ▶ **Dolutedgravir** might increase the concentration of **fampridine**. Avoid. [Severe] Theoretical
 - ▶ H₂ receptor antagonists (**cimetidine**) increase the concentration of **fampridine**. Avoid. [Severe] Theoretical
- Febuxostat**
- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
 - ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical
- Fedratinib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study

Fedratinib (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to fedratinib. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Fedratinib moderately increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ Fedratinib moderately increases the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to fedratinib. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **eliglustat**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Fedratinib is predicted to increase the exposure to **everolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit and grapefruit juice** is predicted to increase the exposure to fedratinib. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to fedratinib. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to fedratinib. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to fedratinib. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **opioids (alfentanil)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Fedratinib moderately increases the exposure to **proton pump inhibitors (omeprazole)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to fedratinib. Avoid depending on other drugs taken—consult product literature. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to fedratinib. Avoid. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- ▶ Fedratinib is predicted to increase the exposure to **temsirolimus** (oral). Monitor and adjust dose. [Moderate] Theoretical
- Felbinac** → see NSAIDs
- Felodipine** → see calcium channel blockers
- Fenfluramine** → see TABLE 13 p. 963 (serotonin syndrome)
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **acarbose**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the concentration of fenfluramine. Adjust dose. [Severe] Theoretical
- ▶ **Antiepileptics (stiripentol)** (given with clobazam, and with or without valproate) modestly increase the exposure to fenfluramine. Adjust fenfluramine dose, p. 221. [Severe] Study
- ▶ **Antihistamines, sedating (cyproheptadine)** might decrease the efficacy of fenfluramine. [Severe] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **dipeptidylpeptidase-4 inhibitors**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **glucagon-like peptide-1 receptor agonists**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **insulin**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **meglitinides**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **metformin**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **pioglitazone**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of fenfluramine. [Severe] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **sodium glucose co-transporter 2 inhibitors**. [Moderate] Theoretical
- ▶ Fenfluramine might decrease blood glucose concentrations when given with **sulfonylureas**. [Moderate] Theoretical
- Fenofibrate** → see fibrates
- Fentanyl** → see opioids
- Fesoterodine** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can fesoterodine; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Bupropion** is predicted to increase the exposure to fesoterodine. Use with caution and adjust dose. [Mid] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to fesoterodine. Use with caution and adjust dose. [Mid] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mid] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mid] Theoretical
- Fexofenadine** → see antihistamines, non-sedating
- Fibrates**
- bezafibrate · ciprofibrate · fenofibrate · gemfibrozil
- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **fibrates**. [Severe] Theoretical
 - ▶ Oral **antacids** decrease the exposure to oral **gemfibrozil**. [Moderate] Study
 - ▶ **Gemfibrozil** slightly increases the exposure to **anti-androgens (apalutamide)**. [Mid] Study
 - ▶ **Gemfibrozil** moderately increases the exposure to **anti-androgens (enzalutamide)**. Avoid or adjust enzalutamide dose. [Severe] Study
 - ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
 - ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
 - ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
 - ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
 - ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
 - ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
 - ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulin**. [Moderate] Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the concentration of **letermovir**. [Moderate] Study
 - ▶ **Gemfibrozil** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Severe] Study
 - ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
 - ▶ **Gemfibrozil** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
 - ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose. [Moderate] Theoretical
 - ▶ **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [Severe] Study
 - ▶ **Gemfibrozil** moderately increases the exposure to **roxadustat**. Monitor haemoglobin and adjust dose. [Moderate] Study
 - ▶ **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [Severe] Study
 - ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Monitor and adjust **fenofibrate** dose, p. 144. [Severe] Anecdotal
 - ▶ **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
 - ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [Severe] Study
 - ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Use with caution and adjust **fenofibrate** dose, p. 144. [Severe] Theoretical
 - ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Theoretical
 - ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Study
 - ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 144, p. 146. [Severe] Anecdotal
 - ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 146. [Severe] Study
 - ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **fenofibrate** dose, p. 144. [Severe] Anecdotal
 - ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 147. [Severe] Study
 - ▶ **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
 - ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
 - ▶ **Gemfibrozil** increases the exposure to **treprostinil**. Adjust dose. [Moderate] Study
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose. [Severe] Study
 - ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- Fidaxomicin**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

Fidaxomicin (continued)

- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

Filgotinib

- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **abatacept**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **akinra**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **etanercept**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **leflunomide**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **filgotinib**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **monoclonal antibodies** (**adalimumab**, **certolizumab pegol**, **golimumab**, **infliximab**, **rituximab**, **sarilumab**, **secukinumab**, **tocilizumab**). Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tofacitinib**. Avoid. [Severe] Theoretical

Fingolimod → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies** (**alemtuzumab**) are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical

Flavoxate → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation** (**clozapine**) can cause constipation, as can **flavoxate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Flecainide → see antiarrhythmics

Flucloxacillin → see penicillins

Fluconazole → see antifungals, azoles

Flucytosine

- ▶ **Amphotericin B** increases the risk of toxicity when given with **flucytosine**. [Severe] Study
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study

- ▶ **NRTIs** (**zidovudine**) increase the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [Severe] Theoretical

Fludarabine → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Fludarabine increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 963

Fludrocortisone → see corticosteroids

Fluocinolone

- ▶ With intravitreal use of **fluocinolone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).
- ▶ Interactions do not generally apply to corticosteroids used for topical action unless specified.

Fluorouracil → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **fluorouracil**, the possibility of interactions should be borne in mind.

- ▶ **Fluorouracil** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
 - ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Folates** (**folic acid**) are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
 - ▶ **Folates** (**folinic acid**) are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists** (**cimetidine**) slightly increase the exposure to **fluorouracil**. [Severe] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 963 → Also see TABLE 5 p. 961
 - ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study
- Fluoxetine** → see SSRIs
- Flupentixol** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Antipsychotics, second generation** (**clozapine**) can cause constipation, as can **flupentixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
 - ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 961

Flurazepam → see benzodiazepines

Flurbiprofen → see NSAIDs

Flutamide → see anti-androgens

Fluticasone → see corticosteroids

Fluvastatin → see statins

Fluvoxamine → see SSRIs

Folates

folic acid · folinic acid · levofolinic acid

- ▶ **Folates** are predicted to decrease the concentration of **antiepileptics** (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Monitor concentration and adjust dose. [Severe] Study
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal

- ▶ **Folic acid** is predicted to increase the risk of toxicity when given with **flourouracil**. Avoid. [Severe] Theoretical
 - ▶ **Folinic acid** is predicted to increase the risk of toxicity when given with **flourouracil**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study
 - ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - Folic acid** → see folates
 - Folinic acid** → see folates
 - Fondaparinux** → see factor XA inhibitors
 - Formoterol** → see beta₂ agonists
 - Fosamprenavir** → see HIV-protease inhibitors
 - Fosaprepitant** → see neurokinin-1 receptor antagonists
 - Foscarnet** → see TABLE 2 p. 960 (nephrotoxicity)
 - ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 960
 - Fosinopril** → see ACE inhibitors
 - Fosphenytoin** → see anti-epileptics
 - Fostamatinib**
 - ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Fostamatinib** potentially alters the anticoagulant effect of **coumarins** (**warfarin**). [Moderate] Theoretical
 - ▶ **Fostamatinib** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose, p. 86. [Moderate] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
 - ▶ **Fostamatinib** slightly increases the exposure to **statins** (**rosuvastatin**). [Moderate] Study
 - ▶ **Fostamatinib** slightly increases the exposure to **statins** (**simvastatin**). Monitor adverse effects and adjust dose. [Moderate] Study
 - Fostemsavir**
 - ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
 - ▶ **Fostemsavir** increases the concentration of **ethinylestradiol** from a combined hormonal contraceptive. Adjust dose—consult product literature. [Severe] Study
 - ▶ **Fostemsavir** is predicted to increase the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
 - ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
 - ▶ **Fostemsavir** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **simvastatin**). Adjust starting dose and monitor. [Severe] Theoretical
 - ▶ **Fostemsavir** increases the exposure to **statins** (**rosuvastatin**). Adjust starting dose and monitor. [Severe] Study
 - ▶ **Fostemsavir** is predicted to increase the exposure to **tenofovir alafenamide**. Adjust dose—consult product literature. [Moderate] Theoretical
 - Frovatriptan** → see triptans
 - Fulvestrant** → see TABLE 5 p. 961 (thromboembolism)
 - Furosemide** → see loop diuretics
 - Fusidate**
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fusidate**. Avoid. [Moderate] Theoretical
 - ▶ **Fusidate** has been reported to cause rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
 - Gabapentin** → see antiepileptics
 - Galantamine** → see anticholinesterases, centrally acting
 - Ganciclovir** → see TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbapenems** (**imipenem**). Avoid. [Severe] Anecdotal
 - ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical
 - ▶ **Nitisinone** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- Gefitinib**
 - ▶ Oral **antacids** are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
 - ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**eslicarbamazepine**) are predicted to decrease the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ Antiepileptics (**oxcarbazepine**) decrease the exposure to **gefitinib**. [Severe] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [Severe] Study
 - ▶ **Bupropion** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ Oral calcium salts (**calcium carbonate**) -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Severe] Study

Gefitinib (continued)

- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Gefitinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Gefitinib** might affect the exposure to **vemurafenib**. [Moderate] Theoretical
- Gemcitabine** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Gemfibrozil** → see fibrates
- Gemtuzumab ozogamicin** → see TABLE 15 p. 963 (myelosuppression)
- Gentamicin** → see aminoglycosides
- Gilteritinib**
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Gilteritinib** is predicted to decrease the efficacy of **SSRIs (escitalopram, fluoxetine, sertraline)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Vandetanib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- Givosiran**
 - ▶ **Givosiran** is predicted to increase the exposure to **agomelatine**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **atomoxetine**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **beta blockers, selective (neбиволol)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **eliglustat**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **MAO-B inhibitors (rasagiline)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **melatonin**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **SNRIs (duloxetine)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Givosiran** is predicted to increase the exposure to **tizanidine**. Use with caution and adjust dose. [Moderate] Study
- Glasdegib** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
 - ▶ **Modafinil** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, etravirine, nevirapine)** are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
- Glecaprevir**
- ▶ **Anti-androgens (enzalutamide)** are predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedaron)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
 - ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
 - ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Glecaprevir** with pibrentasvir increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **glecaprevir**. Avoid. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** markedly affect the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
 - ▶ **Glecaprevir** with pibrentasvir markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
 - ▶ **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
 - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
 - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 146. [Moderate] Study
 - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
 - ▶ **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Glecaprevir** with pibrentasvir increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Moderate] Study

Glibenclamide → see sulfonylureas

Gliclazide → see sulfonylureas

Glimepiride → see sulfonylureas

Glipizide → see sulfonylureas

Glucagon

▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study

Glucagon-like peptide-1 receptor agonists → see TABLE 14 p. 963 (antidiabetic drugs)

dulaglutide · exenatide · liraglutide · lixisenatide · semaglutide

▶ With standard-release **exenatide**: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, **exenatide** injection.

▶ Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, **lixisenatide** injection.

▶ **Fenfluramine** might decrease blood glucose concentrations when given with **glucagon-like peptide-1 receptor agonists**. [Moderate] Theoretical

Glucosamine

▶ **Glucosamine** potentially decreases the anticoagulant effect of **coumarins (acenocoumarol)**. [Moderate] Anecdotal

▶ **Glucosamine** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

Glycerol phenylbutyrate

▶ **Antiepileptics (valproate)** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical

▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical

▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical

Glyceryl trinitrate → see nitrates

Glycopyrronium → see TABLE 10 p. 962 (antimuscarinics)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **glycopyrronium**, the possibility of interactions should be borne in mind.

▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **glycopyrronium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Golimimumab → see monoclonal antibodies

Granisetron → see 5-HT₃-receptor antagonists

Grapefruit

▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study

▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Study

▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study

▶ **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Study

▶ **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilastine)**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit**. [Moderate] Study

▶ **Grapefruit juice** increases the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study

▶ **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperaquine)**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

Grapefruit (continued)

- ▶ Grapefruit juice is predicted to increase the exposure to **berotralstat**. [Moderate] Theoretical
- ▶ Grapefruit juice greatly decreases the exposure to **beta blockers**, **selective (celiprolol)**. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
- ▶ Grapefruit juice increases the exposure to **bupirone**. Avoid. [Mild] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ Grapefruit juice very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mild] Study
- ▶ Grapefruit juice increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice increases the exposure to **calcium channel blockers (nicardipine)**. [Mild] Study
- ▶ Grapefruit juice increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mild] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **certinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ Grapefruit juice markedly decreases the exposure to **clopidogrel**. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **elxacaftor**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
- ▶ Grapefruit is predicted to increase the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ Grapefruit and grapefruit juice is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **foxtamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **imatnib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **lomitapide**. Avoid. [Mild] Theoretical
- ▶ Grapefruit juice is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit and grapefruit juice is predicted to increase the exposure to **penigatinib**. Avoid. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **selumetinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ Grapefruit juice moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ Grapefruit juice increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the concentration of **temsirrolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
- ▶ Grapefruit juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ Grapefruit is predicted to increase the exposure to **upadacitinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

Grass pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Grazoprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Fostemsavir** is predicted to increase the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **grazoprevir**. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** moderately increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 145. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 146. [Moderate] Theoretical
- ▶ **Grazoprevir** with elbasvir moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 146. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 147. [Moderate] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

Griseofulvin

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ **Griseofulvin** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol).

Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study

- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal

Guanfacine → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study

Guanfacine (continued)

- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

Guselkumab → see monoclonal antibodies

H₂ receptor antagonists

cimetidine · famotidine · nizatidine · ranitidine

- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **acalabrutinib**. **Acalabrutinib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Moderate] Theoretical
- ▶ **Cimetidine** decreases the clearance of **albendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [Mild] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [Moderate] Study
- ▶ **Cimetidine** decreases the clearance of **antimalarials (chloroquine)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antimalarials (quinine)**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers (diltiazem, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. [Moderate] Theoretical
- ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers (nifedipine)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **calcium channel blockers (verapamil)**. [Moderate] Study
- ▶ **Cimetidine** is predicted to slightly increase the exposure to **capcitabine**. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the concentration of **ciclosporin**. [Mild] Study
- ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **daclotizib**. **Daclotizib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Mild] Study
- ▶ **Cimetidine** increases the exposure to **darifenacin**. [Mild] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Cimetidine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [Severe] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **flourouracil**. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **H₂ receptor antagonists** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
- ▶ **Cimetidine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Ranitidine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **macrolides (erythromycin)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust moclobemide dose. [Mild] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** might affect the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **NNRTIs (rilpivirine)**. **H₂ receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
- ▶ **Cimetidine** increases the concentration of **opioids (alfentanil)**. Use with caution and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **opioids (fentanyl)**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal

- ▶ **Cimetidine** slightly increases the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take 2 hours before or 10 hours after **H₂ receptor antagonists**. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** slightly increases the exposure to **SNRIs (venlafaxine)**. [\[Mild\]](#) Study
 - ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461, sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **Sotorasib**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (citalopram, escitalopram)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (paroxetine, sertraline)**. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [\[Severe\]](#) Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
 - ▶ **Cimetidine** slightly increases the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 324. [\[Mild\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [\[Moderate\]](#) Study
- Haloperidol** → see [TABLE 8](#) p. 961 (hypotension), [TABLE 9](#) p. 962 (QT-interval prolongation), [TABLE 11](#) p. 962 (CNS depressant effects), [TABLE 10](#) p. 962 (antimuscarinics)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 11](#) p. 962
 - ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole)** increase the concentration of **haloperidol**. [\[Moderate\]](#) Study
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **haloperidol**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see [TABLE 8](#) p. 961 → Also see [TABLE 11](#) p. 962 → Also see [TABLE 10](#) p. 962
 - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 8](#) p. 961 → Also see [TABLE 9](#) p. 962 → Also see [TABLE 10](#) p. 962
 - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **haloperidol**. [\[Severe\]](#) Theoretical
 - ▶ **Haloperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see [TABLE 8](#) p. 961
 - ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Nirmatrelevir** boosted with ritonavir is predicted to increase the concentration of **haloperidol**. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** decrease the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **SNRIs (venlafaxine)** slightly increase the exposure to **haloperidol**. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 962 → Also see [TABLE 11](#) p. 962
 - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
 - ▶ **SSRIs (fluoxetine)** increase the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **SSRIs (fluvoxamine)** increase the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study
- Heparin** → see [TABLE 16](#) p. 964 (increased serum potassium), [TABLE 3](#) p. 960 (anticoagulant effects)
- ▶ **Andexanet alfa** has been reported to affect the anticoagulant effect of **heparin**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin**. [\[Severe\]](#) Theoretical
- Hepatitis B immunoglobulin** → see immunoglobulins
- Herpes-zoster vaccine, live** → see live vaccines
- HIV-protease inhibitors**
- atazanavir · darunavir · fosamprenavir · lopinavir · ritonavir · tipranavir
- ▶ Caution on concurrent use of **atazanavir, lopinavir with ritonavir, and ritonavir** with drugs that prolong the PR interval.
 - ▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
 - ▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
 - ▶ **Ritonavir** decreases the exposure to **albendazole**. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Ritonavir** is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alpha blockers (doxazosin)**. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. [\[Severe\]](#) Theoretical
 - ▶ **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Ritonavir** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [\[Moderate\]](#) Theoretical
 - ▶ **Oral antacids** are predicted to decrease the absorption of oral **atazanavir**. **Atazanavir** should be taken 2 hours before or 1 hour after antacids. [\[Severe\]](#) Theoretical
 - ▶ **Oral antacids** are predicted to decrease the absorption of oral **tipranavir**. Separate administration by 2 hours. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **anti-androgens (apalutamide)**. [\[Mild\]](#) Study
 - ▶ **Ritonavir** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Ritonavir** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. Avoid or monitor adverse effects. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Severe\]](#) Study

HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to HIV-protease inhibitors. Monitor and adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ HIV-protease inhibitors are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of HIV-protease inhibitors. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to HIV-protease inhibitors. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to HIV-protease inhibitors. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to affect the exposure to **antipsychotics, second generation (clozapine)**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ HIV-protease inhibitors moderately increase the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **benzodiazepines (diazepam, flurazepam)**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the exposure to **berotrastat**. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ Atazanavir moderately increases the exposure to **bictegravir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose. [Severe] Study
- ▶ Ritonavir is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **buspirone**. Adjust buspirone dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ Ritonavir is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose. [Severe] Study
- ▶ HIV-protease inhibitors increase the concentration of **ciclosporin**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Ritonavir might increase the exposure to **cladribine**. [Moderate] Theoretical
- ▶ Ritonavir might decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust colchicine dose. [Severe] Study
- ▶ Atazanavir affects the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study

- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [\[Moderate\]](#) Study
- ▶ **Atazanavir** (alone or boosted with ritonavir) slightly increases the exposure to **dolutegravir**. Adjust dose—consult product literature. [\[Moderate\]](#) Study
- ▶ **Fosamprenavir** boosted with ritonavir slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 471. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **elextacaftr**. Adjust tezacaftor with ivacaftor and elextacaftr p. 206 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 635. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Atazanavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [\[Severe\]](#) Theoretical
- ▶ **Darunavir** boosted with ritonavir or cobicistat is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [\[Moderate\]](#) Theoretical
- ▶ **Lopinavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [\[Severe\]](#) theoretical
- ▶ **Lopinavir** boosted with ritonavir is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
- ▶ **Darunavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Ritonavir** moderately increases the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fedratinib**. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **foxtamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 260. [\[Moderate\]](#) Study

HIV-protease inhibitors (continued)

- ▶ **H₂ receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinitab**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and eluxacaftor p. 206. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust larotrectinib dose, p. 638. [\[Moderate\]](#) Study
- ▶ **Tipranavir** boosted with ritonavir is predicted to decrease the exposure to **ledipasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **lopinavir**) boosted with ritonavir are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust lorlatinib dose. [\[Severe\]](#) Study
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Tipranavir** boosted with ritonavir increases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the exposure to **tipranavir** boosted with ritonavir. Monitor; adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**darunavir**, **fosamprenavir**, **lopinavir**) boosted with ritonavir are predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macrolides (erythromycin)**. [\[Severe\]](#) Theoretical
- ▶ **Atazanavir** moderately to markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Darunavir** boosted with ritonavir markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
- ▶ **Lopinavir** boosted with ritonavir moderately increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **meglinitinides (repaglinide)**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mifepristone**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **tipranavir**) boosted with ritonavir are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **tipranavir**). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz)** decrease the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **NNRTIs (etravirine)** increase the exposure to **fosamprenavir** boosted with ritonavir. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **NNRTIs (nevirapine)** decrease the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **Tipranavir** decreases the exposure to **NNRTIs (etravirine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Tipranavir** slightly decreases the exposure to **NRTIs (abacavir)**. Avoid. [\[Severe\]](#) Study
- ▶ **Tipranavir** slightly decreases the exposure to **NRTIs (zidovudine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust olaparib dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Severe\]](#) Study

- ▶ **HIV-protease inhibitors** boosted with **ritonavir** are predicted to decrease the exposure to **opioids (methadone)**. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids (pethidine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with **ritonavir** increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **HIV-protease inhibitors** given with **carbamazole** are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** boosted with **ritonavir** decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** boosted with **ritonavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** boosted with **ritonavir** is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **ritonavir**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir)**. Avoid. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifamycins (rifabutin)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with **ritonavir** increase the exposure to **rifamycins (rifabutin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with **ritonavir** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 556 or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** might affect the exposure to **statins (pravastatin)**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** are predicted to increase the exposure to **statins (rosuvastatin)**. Avoid or adjust **rosuvastatin** dose, p. 146. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir, ritonavir)** are predicted to increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** are predicted to increase the exposure to **statins (rosuvastatin)**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study

HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors (**darunavir, tipranavir**) are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ HIV-protease inhibitors are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir**) increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir**) are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **Lopinavir** boosted with **ritonavir** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Ritonavir** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 206 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir**) boosted with **ritonavir** are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Anecdotal
- ▶ HIV-protease inhibitors (**fosamprenavir, tipranavir**) boosted with **ritonavir** are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
- ▶ **Ritonavir** decreases the concentration of **thyroid hormones (levothyroxine)**. MHRA advises monitor TSH for at least one month after starting or stopping **ritonavir**. [Moderate] Anecdotal
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (**ritonavir, tipranavir**) are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors increase the exposure to **triptans (almotriptan)**. [Mild] Study

- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
 - ▶ **Tucatinib** is predicted to increase the exposure to HIV-protease inhibitors (**darunavir, tipranavir**). Avoid or adjust dose. [Moderate] Theoretical
 - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir**) boosted with **ritonavir** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see **Contraceptives, interactions** p. 566. [Severe] Anecdotal
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Tipranavir** is predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
 - ▶ **Atazanavir** boosted with **ritonavir** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
 - ▶ **Lopinavir** boosted with **ritonavir** is predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
 - ▶ **Tipranavir** boosted with **ritonavir** is predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
 - ▶ HIV-protease inhibitors are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Homotropine** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ Antipsychotics, second generation (**clozapine**) can cause constipation, as can **homotropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Hormone replacement therapy

- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ Hormone replacement therapy is predicted to alter the exposure to antiepileptics (**lamotrigine**). [Moderate] Theoretical
- ▶ Hormone replacement therapy decreases the clearance of **dopamine receptor agonists (ropinirole)**. Monitor and adjust dose. [Moderate] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Moderate] Theoretical
- ▶ Hormone replacement therapy is predicted to increase the exposure to MAO-B inhibitors (**selegiline**). Avoid. [Moderate] Study
- ▶ **Modafinil** is predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ NSAIDs (**etoricoxib**) increase the exposure to hormone replacement therapy. [Moderate] Study
- ▶ Hormone replacement therapy potentially opposes the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ Hormone replacement therapy potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical

- ▶ **Rifamycins** are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- ▶ **St John's wort** is predicted to decrease the efficacy of hormone replacement therapy. [Moderate] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical
- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- Hydralazine** → see TABLE 8 p. 961 (hypotension)
- ▶ **Diazoxide** increases the risk of severe hypotension when given with hydralazine. [Severe] Study → Also see TABLE 8 p. 961
- Hydrochlorothiazide** → see thiazide diuretics
- Hydrocortisone** → see corticosteroids
- Hydroflumethiazide** → see thiazide diuretics
- Hydromorphone** → see opioids
- Hydroxycarbamide** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with hydroxycarbamide. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Hydroxychloroquine** → see TABLE 9 p. 962 (QT-interval prolongation)
 - ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [Moderate] Theoretical
 - ▶ Oral **antacids** are predicted to decrease the absorption of oral hydroxychloroquine. Separate administration by at least 4 hours. [Moderate] Theoretical
 - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of hydroxychloroquine. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to decrease the clearance of hydroxychloroquine. [Moderate] Theoretical
 - ▶ Oral **kaolin** is predicted to decrease the absorption of oral hydroxychloroquine. [Moderate] Theoretical
 - ▶ **Lanthanum** is predicted to decrease the absorption of hydroxychloroquine. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
 - ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with hydroxychloroquine. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ Oral **magnesium trisilicate** is predicted to decrease the absorption of oral hydroxychloroquine. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- Hydroxyzine** → see antihistamines, sedating
- Hyoscine** → see TABLE 10 p. 962 (antimuscarinics)
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **hyoscine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- Ibandronate** → see bisphosphonates
- Ibrutinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 4 p. 960 (antiplatelet effects)

FOOD AND LIFESTYLE Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

 - ▶ **Ibrutinib** is predicted to increase the exposure to **aliskiren**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to ibrutinib. Avoid or monitor. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose. [Severe] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ibrutinib. Avoid or monitor. [Severe] Study
 - ▶ **Antifungals, azoles (flucanazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ibrutinib. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to ibrutinib. Adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to ibrutinib. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to ibrutinib. Avoid or monitor. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to ibrutinib. Avoid or monitor. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **everolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Ibrutinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to ibrutinib. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ibrutinib. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to ibrutinib. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
 - ▶ **Letermovir** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Ibrutinib** is predicted to increase the exposure to **loperamide**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ibrutinib. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to ibrutinib. Avoid or monitor. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors. [Severe] Study

Ibrutinib (continued)

- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ibrutinib**. Avoid or adjust **ibrutinib** dose. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **sirolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Ibrutinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Ibrutinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Tucatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust dose. [Moderate] Theoretical
- Ibuprofen** → see NSAIDs
- Icatibant**
 - ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icaticbant** and **icaticbant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical
- Idarubicin** → see anthracyclines
- Idelalisib**
 - ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mid] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical
 - ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampnel)**. [Mid] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study
- ▶ **Idelalisib** moderately increases the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (ercanidipine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mid] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [Severe] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mil] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **drospirenone**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **foxtamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **imatiniib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mil] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (methadone)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical

Idelalisib (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 556 or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
 - ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 206 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Idelalisib** increases the exposure to **triptans (almotriptan)**. [Mild] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- Iloprost** → see TABLE 8 p. 961 (hypotension), TABLE 4 p. 960 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study → Also see TABLE 4 p. 960
 - ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **imatinib**. [Moderate] Theoretical
 - ▶ **Antiepileptics (topiramate)** are predicted to decrease the exposure to **imatinib**. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to antihistamines, non-sedating (**mizolastine**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to antihistamines, non-sedating (**rupatadine**). Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of antimalarials (**piperaquine**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone**). Adjust **lurasidone** dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to antipsychotics, second generation (**quetiapine**). Avoid. [Moderate] Study
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to benzodiazepines (**alprazolam**). [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to benzodiazepines (**midazolam**). Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of dopamine receptor agonists (**cabergoline**). [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **elezacaftor**. Adjust **tezacaftor** with **ivacaftor** and **elezacaftor** p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists** (**bosentan**) are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 203, **tezacaftor** with **ivacaftor** p. 206, and **tezacaftor** with **ivacaftor** and **elezacaftor** p. 206. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study

Imatinib (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 4 p. 960
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **St John's wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study

- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal → Also see TABLE 15 p. 963
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Imatinib** causes hypothyroidism when given with **thyroid hormones (levothyroxine)** in thyroidectomy patients. [Moderate] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Imidapril → see ACE inhibitors

Impipemem → see carbapenems

Imipramine → see tricyclic antidepressants

Immunoglobulins

Anti-D (Rh₀) immunoglobulin · antithymocyte immunoglobulin (rabbit) · cytomegalovirus immunoglobulin · hepatitis B immunoglobulin · normal immunoglobulin · rabies immunoglobulin · tetanus immunoglobulin · varicella-zoster immunoglobulin

- ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral)**. Avoid and for 5 months after stopping **cytomegalovirus immunoglobulin**. [Moderate] Theoretical
- ▶ **Anti-D (Rh₀) immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping **anti-D (Rh₀) immunoglobulin**. [Moderate] Theoretical
- ▶ **Normal immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping **normal immunoglobulin**. [Moderate] Theoretical
- ▶ **Varicella-zoster immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin**. [Moderate] Theoretical
- ▶ **Varicella-zoster immunoglobulin** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. Avoid and

for 3 months after stopping varicella-zoster immunoglobulin.

[Moderate] Theoretical

- ▶ **Varicella-zoster immunoglobulin** is predicted to decrease efficacy **live vaccines (measles, mumps and rubella vaccine, live)**. Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin**. [Moderate] Theoretical
- ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the exposure to **live vaccines (varicella-zoster vaccine)**. Avoid and for 3 months after stopping **cytomegalovirus immunoglobulin**. [Moderate] Theoretical
- ▶ **Cytomegalovirus immunoglobulin** is predicted to increase the risk of adverse effects when given with **loop diuretics**. Avoid. [Moderate] Theoretical
- ▶ **Loop diuretics** might increase the risk of adverse effects when given with **normal immunoglobulin**. Avoid. [Moderate] Theoretical
- ▶ **Normal immunoglobulin** is predicted to alter the effects of **monoclonal antibodies (dinutuximab)**. Avoid. [Severe] Theoretical

Indacaterol → see beta₂ agonists

Indapamide → see thiazide diuretics

Indometacin → see NSAIDs

Indoramin → see alpha blockers

Infliximab → see monoclonal antibodies

Influenza vaccine (live) → see live vaccines

Intensers → see TABLE 2 p. 960 (nephrotoxicity)

- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **intensers**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **intensers**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical

Inotuzumab ozogamicin → see monoclonal antibodies

Insulin → see TABLE 14 p. 963 (antidiabetic drugs)

- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **insulin**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulin**. [Moderate] Theoretical
- ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **insulin**. Monitor blood glucose and adjust dose. [Severe] Theoretical

Interferon beta → see interferons

Interferons → see TABLE 15 p. 963 (myelosuppression)

interferon beta · peginterferon alfa · ropeginterferon alfa

- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. [Moderate] Theoretical
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **atomoxetine**. [Moderate] Theoretical
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **beta blockers, selective (neбиволol)**. [Moderate] Theoretical
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Ropeginterferon alfa** is predicted to increase the exposure to **vortioxetine**. [Moderate] Theoretical

Ipilimumab → see monoclonal antibodies

Ipratropium → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **ipratropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

▶ **Beta₂ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal

Irbesartan → see angiotensin-II receptor antagonists

Irinotecan → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Lapatinib** increases the exposure to the active metabolite of **irinotecan**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **irinotecan**. [Moderate] Study
- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **St John's wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical

Iron

- ▶ Oral **antacids** decrease the absorption of oral iron. Manufacturer advises iron should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **iron**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
- ▶ Oral **iron** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral iron decreases the exposure to oral **bictegravir**. Manufacturer advises bictegravir should be taken 2 hours before iron. [Moderate] Study
- ▶ Oral **iron** decreases the absorption of oral **bisphosphonates (clodronate)**. **Clodronate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral **iron** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. **Ibandronate** should be taken 1 hour before or 6 hours after iron. [Moderate] Theoretical
- ▶ Oral **iron** decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts (calcium carbonate)** decrease the absorption of oral **iron**. **Calcium carbonate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral **iron** is predicted to decrease the exposure to oral **carbidoopa**. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of **iron**. [Moderate] Anecdotal
- ▶ Oral **iron** decreases the absorption of oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron. [Moderate] Study
- ▶ Oral **iron** is predicted to decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after iron. [Severe] Theoretical

Iron (continued)

- ▶ Oral **entacapone** is predicted to decrease the absorption of oral iron. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Oral iron is predicted to decrease the absorption of oral iron chelators (**deferiprone**). [Moderate] Theoretical
- ▶ Oral iron decreases the absorption of oral **levodopa**. [Moderate] Study
- ▶ Oral iron decreases the effects of oral **methylodopa**. [Moderate] Study
- ▶ Oral iron is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. [Mid] Study
- ▶ Oral iron decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Iron might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after iron. [Moderate] Theoretical
- ▶ Oral iron decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [Moderate] Study
- ▶ Oral iron decreases the absorption of oral **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Oral **trientine** potentially decreases the absorption of oral iron. [Moderate] Theoretical
- ▶ Oral **zinc** is predicted to decrease the efficacy of oral iron and oral iron is predicted to decrease the efficacy of oral **zinc**. [Moderate] Study

Iron chelators → see TABLE 15 p. 963 (myelosuppression)

deferiasirox · deferiprone · desferrioxamine · dexrazoxane ·

- ▶ **Aluminium hydroxide** is predicted to decrease the exposure to **deferiasirox**. Avoid. [Moderate] Theoretical
- ▶ **Aluminium hydroxide** is predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- ▶ **Deferiasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **deferiasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Dexrazoxane** might decrease the absorption of **antiepileptics (fosphenytoin, phenytoin)**. Avoid. [Severe] Theoretical
- ▶ **Deferiasirox** is predicted to increase the exposure to **antipsychotics, second generation (clozapine)**. Avoid. [Moderate] Theoretical
- ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular adverse effects when given with **deferiprone**. [Severe] Theoretical
- ▶ **Ascorbic acid** might increase the risk of cardiovascular adverse effects when given with **desferrioxamine**. Manufacturer advises caution or adjust ascorbic acid dose; monitor cardiac function and avoid concurrent use in those with cardiac failure. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferiasirox**. [Severe] Theoretical
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferiasirox**. [Severe] Theoretical
- ▶ **Dexrazoxane** might increase the risk of immunosuppression when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferiasirox**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferiasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ Oral iron is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dexrazoxane**. Avoid. [Severe] Theoretical
- ▶ **Deferiasirox** moderately increases the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study
- ▶ **Deferiasirox** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical

- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferiasirox**. [Severe] Theoretical
 - ▶ **NSAIDs (diclofenac)** are predicted to increase the exposure to **deferiprone**. [Moderate] Theoretical
 - ▶ **Deferiasirox** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **deferiasirox**. Monitor serum ferritin and adjust dose. [Moderate] Study
 - ▶ **Deferiasirox** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
 - ▶ **Dexrazoxane** might increase the risk of immunosuppression when given with **tacrolimus**. [Severe] Theoretical
 - ▶ **Deferiasirox** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
 - ▶ **Deferiasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
 - ▶ **Deferiasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
 - ▶ **Deferiasirox** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical
 - ▶ **Deferiasirox** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
 - ▶ Oral **zinc** is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical
- Isavuconazole** → see antifungals, azoles
Isocarboxazid → see MAOIs, irreversible
Isoflurane → see volatile halogenated anaesthetics
Isonmethylthene → see sympathomimetics, vasoconstrictor
Isoniazid → see TABLE 1 p. 960 (hepatotoxicity), TABLE 12 p. 963 (peripheral neuropathy)

FOOD AND LIFESTYLE Avoid tyramine-rich foods (such as mature cheeses, salami, pickled herring, Bovril[®], Oxo[®], Marmite[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or histamine-rich foods (such as very mature cheese or fish from the scromboid family (e.g. tuna, mackerel, salmon)) with **isoniazid**, as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
 - ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 960
 - ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study → Also see TABLE 12 p. 963
 - ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal
 - ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
 - ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 960
 - ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
 - ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- Isosorbide dinitrate** → see nitrates
Isosorbide mononitrate → see nitrates
Isotretinoin → see retinoids
Itraconazole → see antifungals, azoles
Ivabradine → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical → Also see TABLE 6 p. 961

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
 - ▶ **St John's wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- Ivacaftor**
- FOOD AND LIFESTYLE** Food or drinks containing bitter (Seville) oranges are predicted to increase the exposure to ivacaftor.
- ▶ **Ivacaftor** is predicted to increase the exposure to **afatinib**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **berotralstat**. [Severe] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **ivacaftor**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ivacaftor** is predicted to increase the exposure to **ciclosporin**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
 - ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Ivacaftor** is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Ivacaftor** is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study

Ivacaftor (continued)

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elxacaftor p. 206. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elxacaftor p. 206. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). [Unknown] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ **Ivacaftor** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ivacaftor** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Ivacaftor** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical

Ivermectin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Ixazomib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ikekizumab** → see monoclonal antibodies
- Kaolin**
- ▶ Oral **kaolin** decreases the absorption of oral **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ Oral **kaolin** is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
 - ▶ Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- Ketamine** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. [Severe] Theoretical

Ketoconazole → see antifungals, azoles

Ketoprofen → see NSAIDs

Ketorolac → see NSAIDs

Ketotifen → see antihistamines, sedating

Labetalol → see beta blockers, non-selective

Lacidipine → see calcium channel blockers

Lacosamide → see antiepileptics

Lamivudine → see NRTIs

Lamotrigine → see antiepileptics

Lanreotide

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

Lansoprazole → see proton pump inhibitors

Lanthanum

- ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- ▶ Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study

Lapatinib → see TABLE 9 p. 962 (QT-interval prolongation)

▶ **Lapatinib** is predicted to increase the exposure to **afatinib**.

[Moderate] Study

▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**.

[Moderate] Theoretical

▶ **Lapatinib** is predicted to increase the exposure to **alpelisib**.

[Moderate] Theoretical

▶ Oral **antacids** is predicted to decrease the absorption of oral

lapatinib. Avoid. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

▶ **Antiarrhythmics (dronedronare)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to

lapatinib. Avoid. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)**

are predicted to increase the exposure to **lapatinib**. [Moderate]

Study → Also see TABLE 9 p. 962

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are

predicted to increase the exposure to **lapatinib**. Avoid.

[Moderate] Study → Also see TABLE 9 p. 962

▶ **Lapatinib** is predicted to increase the exposure to

antihistamines, non-sedating (**fexofenadine**). [Moderate] Theoretical

▶ **Lapatinib** is predicted to increase the exposure to **berotralstat**.

[Severe] Study

▶ **Lapatinib** is predicted to increase the exposure to **beta blockers,**

non-selective (nadolo). [Moderate] Study

▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**.

Use with caution or avoid. [Moderate] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to

increase the exposure to **lapatinib**. [Moderate] Study

▶ Oral **calcium salts (calcium carbonate)**-containing antacids are

predicted to decrease the absorption of oral **lapatinib**. Avoid.

[Moderate] Theoretical

- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Ciclosporin** might increase the concentration of **lapatinib**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
 - ▶ **Idealisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
 - ▶ **Lapatinib** increases the exposure to the active metabolite of **irinotecan**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mid] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Lapatinib** increases the exposure to **pazopanib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
 - ▶ **Rifampycins (rifampicin)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
 - ▶ **Oral sodium bicarbonate-containing antacids** are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
 - ▶ **Lapatinib** might increase the exposure to **tigecycline**. [Mid] Anecdotal
 - ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Lapatinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ### Laronidase
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ### Larotrectinib
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
 - ▶ **Larotrectinib** slightly increases the exposure to **benzodiazepines (midazolam)**. Use with caution and adjust dose. [Mid] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mid] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
 - ▶ **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mid] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
 - ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mid] Theoretical

Larotrectinib (continued)

- ▶ **Grapefruit** juice is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical

Ledipasvir

- ▶ Oral **antacids** are predicted to decrease the exposure to oral **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461. [Moderate] Theoretical
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
 - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Anecdotal
 - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
 - ▶ **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
 - ▶ **Ledipasvir** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
- Leflunomide** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)

PHARMACOLOGY Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **bertralstat**. [Severe] Theoretical
- ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **leflunomide**. Avoid. [Severe] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study

- ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **NRTIs (zidovudine)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rifamycins (rifampicin)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mid] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Leflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Lenalidomide** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Moderate] Theoretical
- ▶ **Lenvatinib** → see TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Lercanidipine** → see calcium channel blockers
- ▶ **Letermovir**
 - ▶ **Letermovir** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the concentration of **antiarrhythmics (amiodarone)**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
 - ▶ **Letermovir** slightly decreases the exposure to **antifungals, azoles (voriconazole)**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the concentration of **antihistamines, non-sedating (exfenadine)**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **axitinib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, ncardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **ceritinib**. [Moderate] Study
 - ▶ **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to decrease the concentration of **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **crizotinib**. [Moderate] Study

Letermovir (continued)

- ▶ **Letermovir** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Letermovir** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mid] Study
- ▶ **Letermovir** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Letermovir** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mid] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elxacaftor p. 206. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **meglitinides (repaglinide)**. Avoid. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **nilotinib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pazopanib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **roxolitinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Letermovir** increases the concentration of **sirrolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical

- ▶ **Letermovir** moderately increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 145. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **statins (pravastatin)**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (docetaxel)**. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Anecdotal
 - ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to decrease the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **venmarafenib**. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Levamisole**
- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [\[Moderate\]](#) Study
 - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **levamisole**. [\[Moderate\]](#) Study
 - ▶ **Levamisole** increases the exposure to **ivermectin**. [\[Moderate\]](#) Study
- Levetiracetam** → see antiepileptics
- Levobunolol** → see beta blockers, non-selective
- Levobupivacaine** → see anaesthetics, local
- Levocetirizine** → see antihistamines, non-sedating
- Levodopa** → see TABLE 8 p. 961 (hypotension)
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **levodopa**. [\[Moderate\]](#) Study
 - ▶ **Antipsychotics, second generation (amisulpride)** are predicted to decrease the effects of **levodopa**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antipsychotics, second generation (aripiprazole, clozapine, lurasidone, paliperidone)** are predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Antipsychotics, second generation (asenapine)** are predicted to decrease the effects of **levodopa**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Antipsychotics, second generation (olanzapine)** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 961
 - ▶ **Antipsychotics, second generation (quetiapine)** decrease the effects of **levodopa**. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 961
 - ▶ **Antipsychotics, second generation (risperidone)** are predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 961
 - ▶ **Baclofen** is predicted to increase the risk of adverse effects when given with **levodopa**. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 961
 - ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Bupropion** increases the risk of adverse effects when given with **levodopa**. [\[Moderate\]](#) Study
 - ▶ **Droperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 962) decrease the absorption of **levodopa**. [\[Moderate\]](#) Theoretical
 - ▶ **Entacapone** increases the exposure to **levodopa**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Haloperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Oral iron** decreases the absorption of oral **levodopa**. [\[Moderate\]](#) Study
 - ▶ **Isoniazid** decreases the effects of **levodopa**. [\[Moderate\]](#) Study
 - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [\[Mild\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Memantine** is predicted to increase the effects of **levodopa**. [\[Moderate\]](#) Theoretical
 - ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Levodopa** increases the risk of adverse effects when given with **moclobemide**. [\[Moderate\]](#) Study
 - ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Study → Also see TABLE 8 p. 961
 - ▶ **Pimozide** decreases the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [\[Moderate\]](#) Study
 - ▶ **Zuclophenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
- Levofloxacin** → see quinolones
- Levofolinic acid** → see folates
- LevomEPROMazine** → see phenothiazines
- Levonorgestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal

Levonorgestrel (continued)

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Lumacafor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. [\[Severe\]](#) Theoretical

Levothyroxine → see thyroid hormones

Lidocaine → see antiarrhythmics

Linagliptin → see dipeptidylpeptidase-4 inhibitors

Linezolid → see TABLE 13 p. 963 (serotonin syndrome)

FOOD AND LIFESTYLE Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril[®], Oxo[®], Marmite[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Beta₂ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [\[Severe\]](#) Anecdotal
 - ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) theoretical
 - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **linezolid**. [\[Moderate\]](#) Anecdotal
 - ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
 - ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
 - ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
 - ▶ **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **linezolid**. [\[Moderate\]](#) Study
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor (pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Study
- Liothyronine** → see thyroid hormones
- Liraglutide** → see glucagon-like peptide-1 receptor agonists
- Lisdexamfetamine** → see amfetamines
- Lisinopril** → see ACE inhibitors
- Lithium** → see TABLE 13 p. 963 (serotonin syndrome), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
 - ▶ **Acetazolamide** alters the concentration of **lithium**. [\[Severe\]](#) Anecdotal
 - ▶ **Aldosterone antagonists (eplerenone)** potentially increase the concentration of **lithium**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Aldosterone antagonists (spironolactone)** potentially increase the concentration of **lithium**. [\[Moderate\]](#) Study
 - ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [\[Moderate\]](#) Theoretical
 - ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
 - ▶ **Antiepileptics (carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
 - ▶ **Antipsychotics, second generation (quetiapine, risperidone)** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 962
 - ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
 - ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
 - ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
 - ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [\[Unknown\]](#) Theoretical
 - ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 962
 - ▶ **Potassium-sparing diuretics (triamterene)** potentially increase the clearance of **lithium**. [\[Moderate\]](#) Study
 - ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [\[Severe\]](#) Anecdotal
 - ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 962
 - ▶ **Tetracyclines** are predicted to increase the risk of **lithium** toxicity when given with **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
 - ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
 - ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [\[Severe\]](#) Study
 - ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 963 → Also see TABLE 9 p. 962
 - ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 962

Live vaccines

Bacillus Calmette-Guérin vaccine · herpes-zoster vaccine, live · influenza vaccine (live) · measles, mumps and rubella vaccine, live · rotavirus vaccine · typhoid vaccine, oral · varicella-zoster vaccine · yellow fever vaccine, live

GENERAL INFORMATION Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abrociclinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Aciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. [\[Moderate\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amascrine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **diroximel fumarate**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Famciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. [\[Moderate\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **figotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **figolomod**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **flucanazole**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to decrease the exposure to varicella-zoster vaccine. Avoid and for 3 months after stopping cytomegalovirus immunoglobulin. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (varicella-zoster immunoglobulin)** are predicted to decrease the efficacy of herpes-zoster vaccine, live. Avoid and for 3 months after stopping varicella-zoster immunoglobulin. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (varicella-zoster immunoglobulin)** are predicted to decrease efficacy measles, mumps and rubella vaccine, live. Avoid and for at least 3 months after stopping varicella-zoster immunoglobulin. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to decrease the efficacy of live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral). Avoid and for 3 months after stopping cytomegalovirus immunoglobulin. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (anti-D (Rh₀) immunoglobulin)** are predicted to decrease the efficacy of live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine,

Live vaccines (continued)

typhoid vaccine, oral, varicella-zoster vaccine). Avoid and for 3 months after stopping anti-D (Rh_i) immunoglobulin.

[Moderate] Theoretical

- ▶ Immunoglobulins (normal immunoglobulin) are predicted to decrease the efficacy of live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine). Avoid and for 3 months after stopping normal immunoglobulin. [Moderate] Theoretical
- ▶ Immunoglobulins (varicella-zoster immunoglobulin) are predicted to decrease the efficacy of live vaccines (Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine). Avoid and for at least 3 months after stopping varicella-zoster immunoglobulin. [Moderate] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with irinotecan. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with iron chelators (dexrazoxane). Avoid. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with leflunomide. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines (measles, mumps and rubella vaccine, live) might decrease the efficacy of live vaccines (herpes-zoster vaccine, live). [Moderate] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mercaptopurine (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with methotrexate (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mitomycin. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with monoclonal antibodies. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mycophenolate. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with ozanimod. Avoid and for 3 months after stopping ozanimod. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with pemetrexed. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with platinum compounds. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. Avoid and for 1 week after stopping ponesimod. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with procarbazine. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with raltitrexed. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid and for 4 weeks after stopping siponimod. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with streptozocin. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tacrolimus. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (docetaxel, paclitaxel). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tegafur. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with temsirolimus. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with teriflunomide. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tioguanine. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines potentially increase the risk of generalised infection (possibly life-threatening) when given with tofacitinib. Avoid. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with topotecan. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with trabectedin. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with upadacitinib. Avoid. [Severe] Theoretical
- ▶ Valaciclovir is predicted to decrease the efficacy of herpes-zoster vaccine, live. [Moderate] Theoretical
- ▶ Venetoclax potentially decreases the efficacy of live vaccines. Avoid. [Severe] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with vinca alkaloids. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Lixisenatide → see glucagon-like peptide-1 receptor agonists

Lofepramine → see tricyclic antidepressants

Lofexidine → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)

Lomitapide → see TABLE 1 p. 960 (hepatotoxicity)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- ▶ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (bicalutamide) are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Antiarrhythmics (amiodarone) are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Antiarrhythmics (dronedarone) are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 960
 - ▶ Antifungals, azoles (**clotrimazole**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 960
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
 - ▶ Benzodiazepines (**alprazolam**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Cenobamate** is predicted to decrease the exposure to **lomitapide**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
 - ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lomitapide** increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ Dipeptidylpeptidase-4 inhibitors (**linagliptin**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **lomitapide**. Avoid. [Mild] Theoretical
 - ▶ H₂ receptor antagonists (**cimetidine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ H₂ receptor antagonists (**ranitidine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 960
 - ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lomitapide**. Avoid. [Severe] Theoretical
 - ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ **Lomitapide** increases the exposure to **statins (atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours. [Mild] Study → Also see TABLE 1 p. 960
 - ▶ **Lomitapide** increases the exposure to **statins (simvastatin)**. Monitor and adjust **simvastatin** dose, p. 147. [Moderate] Study → Also see TABLE 1 p. 960
 - ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. [Moderate] Theoretical
- Lomustine** → see alkylating agents
- Loop diuretics** → see TABLE 18 p. 964 (hyponatraemia), TABLE 8 p. 961 (hypotension), TABLE 19 p. 964 (ototoxicity), TABLE 17 p. 964 (reduced serum potassium)
- bumetanide · furosemide · torsemide
- ▶ **Aliskiren** slightly decreases the exposure to **furosemide**. [Moderate] Study → Also see TABLE 8 p. 961
 - ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 964
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [Moderate] Study
 - ▶ Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
 - ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to increase the risk of adverse effects when given with **loop diuretics**. Avoid. [Moderate] Theoretical
 - ▶ **Loop diuretics** might increase the risk of adverse effects when given with **immunoglobulins (normal immunoglobulin)**. Avoid. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Theoretical
 - ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
 - ▶ **Nitisinone** is predicted to increase the exposure to **furosemide**. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
 - ▶ **Selpercatinib** is predicted to increase the exposure to **torsemide**. Avoid. [Severe] Study
 - ▶ **Terflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Study

Loop diuretics (continued)

► **Furosemide** might slightly decrease the clearance of **treprostinil**. [\[Unknown\]](#) Theoretical → Also see TABLE 8 p. 961

Loperamide

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **loperamide**. [\[Severe\]](#) Theoretical
- **Antipsychotics, second generation (clozapine)** can cause constipation, as can **loperamide**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Anecdotal
- **Bertralstat** is predicted to increase the concentration of **loperamide**. Monitor and adjust dose. [\[Moderate\]](#) Study
- **Ceritinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
- **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [\[Moderate\]](#) Study
- **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [\[Moderate\]](#) Study
- **Ibrutinib** is predicted to increase the exposure to **loperamide**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- **Ivacaftor** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Lapatinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Mifepristone** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
- **Mirabegron** is predicted to increase the exposure to **loperamide**. [\[Mid\]](#) Theoretical
- **Neratinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Olaparib** might increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
- **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [\[Moderate\]](#) Study
- **Osimertinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Pitolisant** is predicted to decrease the exposure to **loperamide**. [\[Mid\]](#) Theoretical
- **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. [\[Moderate\]](#) Study
- **Tepotinib** is predicted to increase the concentration of **loperamide**. [\[Severe\]](#) Study
- **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- **Vandetanib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. [\[Severe\]](#) Theoretical
- **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical

Loopinavir → see HIV-protease inhibitors

Loprazolam → see benzodiazepines

Loratadine → see antihistamines, non-sedating

Lorazepam → see benzodiazepines

Lorlatinib

- **Lorlatinib** is predicted to decrease the exposure to **aliskiren**. [\[Moderate\]](#) Study
- **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [\[Severe\]](#) Study
- **Lorlatinib** decreases the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
- **Lorlatinib** moderately decreases the exposure to **benzodiazepines (midazolam)**. Avoid. [\[Moderate\]](#) Study

- **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [\[Moderate\]](#) Theoretical
- **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [\[Severe\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **colchicine**. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **coumarins**. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **digoxin**. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **everolimus**. Avoid. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [\[Moderate\]](#) Study
- **Grapefruit juice** is predicted to increase the concentration of **lorlatinib**. Avoid. [\[Moderate\]](#) Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [\[Severe\]](#) Study
- **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [\[Severe\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **loperamide**. [\[Moderate\]](#) Study
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [\[Severe\]](#) Study
- **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [\[Moderate\]](#) Theoretical
- **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [\[Moderate\]](#) Theoretical
- **St John's wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [\[Moderate\]](#) Study
- **Lorlatinib** is predicted to decrease the exposure to **topotecan**. [\[Moderate\]](#) Study

Lormetazepam → see benzodiazepines

Losartan → see angiotensin-II receptor antagonists

Low molecular-weight heparins → see TABLE 16 p. 964 (increased serum potassium), TABLE 3 p. 960 (anticoagulant effects)

bemiparin · dalteparin · enoxaparin · tinzaparin

- **Andexanet alfa** is predicted to affect the anticoagulant effect of **low molecular-weight heparins**. Avoid. [\[Severe\]](#) Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [\[Severe\]](#) Theoretical
- **Loxapine** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
- **Antipsychotics, second generation (clozapine)** can cause constipation, as can **loxapine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- **Combined hormonal contraceptives** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 10 p. 962
- **Loxapine** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961

- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- Lumacaftor**
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole, ketoconazole, posaconazole, voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to benzodiazepines (**midazolam**). Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **corticosteroids (methylprednisolone)**. Adjust dose. [Severe] Theoretical
 - ▶ **Lumacaftor** might decrease the efficacy of subdermal **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **rifamycins (rifabutin)**. Adjust dose. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- Lumefantrine** → see antimalarials
- Lurasidone** → see antipsychotics, second generation
- Lymeicycline** → see tetracyclines
- Macitentan** → see endothelin receptor antagonists
- Macrolides** → see TABLE 9 p. 962 (QT-interval prolongation)
- azithromycin · clarithromycin · erythromycin
- ▶ Interactions do not generally apply to topical use of **azithromycin** unless specified.
 - ▶ Since systemic absorption can follow topical application of **erythromycin**, the possibility of interactions should be borne in mind.
- ▶ **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
 - ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [Severe] Study
 - ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
 - ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
 - ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
 - ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mild] Study → Also see TABLE 9 p. 962
 - ▶ **Clarithromycin** is predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Erythromycin** markedly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Clarithromycin** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
 - ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study

Macrolides (continued)

- ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **antimalarials (chloroquine)**. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **antimalarials (piperazine)**. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 277. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **antipsychotics, second generation (clozapine)**. [\[Severe\]](#) Anecdotal
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **avapritinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **avapritinib**. Avoid or adjust avapritinib dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mid\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mid\]](#) Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** moderately increases the exposure to **benzodiazepines (alprazolam)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **berotralstat**. [\[Severe\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **brigatinib**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bupirone**. Adjust bupirone dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [\[Mid\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** increases the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Erythromycin** greatly increases the exposure to **ciclosporin**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose. [\[Moderate\]](#) Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust cilostazol dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **erythromycin**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Study
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust colchicine dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study

- ▶ **Erythromycin** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Mild] Study
- ▶ **Macrolides** (**clarithromycin, erythromycin**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin, erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **drosipirenone**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dustasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dustasteride**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 206 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin, erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **endothelin receptor antagonists** (**bosentan**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **endothelin receptor antagonists** (**macitentan**). [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 635. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **factor XA inhibitors** (**apixaban**). [Moderate] Study
- ▶ **Macrolides** (**azithromycin, erythromycin**) are predicted to increase the exposure to **factor XA inhibitors** (**apixaban**). [Moderate] Theoretical
- ▶ **Erythromycin** slightly increases the exposure to **factor XA inhibitors** (**edoxaban**). Adjust **edoxaban** dose. [Severe] Study
- ▶ **Macrolides** (**azithromycin, clarithromycin**) are predicted to increase the exposure to **factor XA inhibitors** (**edoxaban**). [Severe] Theoretical
- ▶ **Erythromycin** slightly increases the exposure to **factor XA inhibitors** (**rivaroxaban**). [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mild] Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Macrolides** (**azithromycin, erythromycin**) are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** (**cimetidine**) slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**) are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** (**darunavir, fosamprenavir, lopinavir**) boosted with ritonavir are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** (**ritonavir**) increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** (**tipranavir**) boosted with ritonavir increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors** (**tipranavir**)

Macrolides (continued)

- boosted with ritonavir. Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
 - ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **hydroxychloroquine**. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Clarithromycin** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [Severe] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 203, lumacaftor with ivacaftor p. 205, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elexacaftor p. 206. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Clarithromycin** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 638. [Moderate] Study
 - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **letemovir**. [Moderate] Study
 - ▶ **Clarithromycin** increases the exposure to **linezolid**. [Moderate] Anecdotal
 - ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin, erythromycin**). [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Clarithromycin** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
 - ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
 - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
 - ▶ **Clarithromycin** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **erythromycin**. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **nitinone**. Adjust dose. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** decrease the exposure to **clarithromycin**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **NNRTIs (etravirine)** decrease the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to **NNRTIs (etravirine)**. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **NNRTIs (nevirapine)**. [Moderate] Theoretical
 - ▶ **Clarithromycin** decreases the absorption of **NRTIs (zidovudine)**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical
 - ▶ **Clarithromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Erythromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Clarithromycin** is predicted to increase the concentration of **opioids (methadone)**. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Erythromycin** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Clarithromycin** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 962

- ▶ **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Clarithromycin** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Rifamycins (rifabutin)** have been reported to cause neutropenia when given with **azithromycin**. [Severe] Study
- ▶ **Rifamycins (rifabutin)** decrease the concentration of **clarithromycin** and **clarithromycin** increases the concentration of **rifamycins (rifabutin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifamycins (rifampicin)** greatly decrease the concentration of **clarithromycin**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **rifamycins (rifabutin)** and **rifamycins (rifabutin)** are predicted to decrease the concentration of **erythromycin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **roxolitinib**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **selpatercinib**. Adjust **selpatercinib** dose, p. 639. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **selpatercinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 556 or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** moderately increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Erythromycin** markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonyleureas**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study

Macrolides (continued)

- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. [Severe] Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Clarithromycin** increases the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Macrolides might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ Macrolides are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Macrolides are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** increases the exposure to **triptans (almotriptan)**. [Mild] Study

- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **triptans (eletriptan)**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Azithromycin** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Magnesium

SEPARATION OF ADMINISTRATION Magnesium-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Magnesium-containing antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral magnesium trisilicate decreases the absorption of oral antimalarials (**chloroquine**). Separate administration by at least 4 hours. [Moderate] Study
 - ▶ Oral magnesium might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
 - ▶ Oral magnesium decreases the absorption of oral bisphosphonates (**alendronate**). **Alendronate** should be taken at least 30 minutes before magnesium. [Moderate] Study
 - ▶ Oral magnesium decreases the absorption of oral bisphosphonates (**clodronate**). Avoid magnesium for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
 - ▶ Oral magnesium is predicted to decrease the absorption of oral bisphosphonates (**ibandronate**). Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
 - ▶ Oral magnesium decreases the absorption of oral bisphosphonates (**risedronate**). Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Intravenous magnesium potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** in pregnant women. [Severe] Anecdotal
 - ▶ Oral magnesium trisilicate is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
 - ▶ Intravenous magnesium increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
 - ▶ Oral magnesium trisilicate decreases the absorption of oral **nitrofurantoin**. [Moderate] Study
 - ▶ Magnesium might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after magnesium. [Moderate] Theoretical
 - ▶ Intravenous magnesium is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- MAO-B inhibitors** → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 13 p. 963 (serotonin syndrome)

rasagiline · safinamide · selegiline

FOOD AND LIFESTYLE Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®],

Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Axitinib** is predicted to increase the exposure to **rasagiline**. [Moderate] Theoretical
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. Avoid. [Severe] Theoretical
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAO-B inhibitors**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
- ▶ **Givosiran** is predicted to increase the exposure to **rasagiline**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
- ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 961
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 13 p. 963
- ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Rasagiline** is predicted to increase the risk of a hypertensive crisis when given with **methyphenidate**. Avoid. [Severe] Theoretical
- ▶ **Selegiline** might increase the risk of a hypertensive crisis when given with **methyphenidate**. Avoid. [Severe] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the effects of MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **safinamide**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Rasagiline** is predicted to increase the risk of adverse effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Selegiline** increases the risk of adverse effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 963
- ▶ **Osilodrostat** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-A inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study

- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical
- ▶ **Rucaparib** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Vemurafenib** slightly increases the exposure to **rasagiline**. [Moderate] Study

MAOIs, irreversible → see TABLE 8 p. 961 (hypotension), TABLE 13 p. 963 (serotonin syndrome)

isocarboxazid - phenelzine - tranylcypromine

FOOD AND LIFESTYLE Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- ▶ **MAOIs, irreversible** are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 963
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of **MAOIs, irreversible**. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of cardiovascular adverse effects when given with **beta₂ agonists**. [Moderate] Anecdotal
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Buprionone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 961
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**.

MAOIs, irreversible (continued)

- Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see [TABLE 8 p. 961](#) → Also see [TABLE 13 p. 963](#)
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safranamide**. [\[Severe\]](#) Theoretical → Also see [TABLE 13 p. 963](#)
 - ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methylodopa**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 8 p. 961](#)
 - ▶ **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 13 p. 963](#)
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [\[Severe\]](#) Theoretical → Also see [TABLE 8 p. 961](#)
 - ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
 - ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see [TABLE 8 p. 961](#) → Also see [TABLE 13 p. 963](#)
 - ▶ **MAOIs, irreversible** are predicted to increase the exposure to **triptans (rizatriptan, sumatriptan)**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see [TABLE 13 p. 963](#)
 - ▶ **MAOIs, irreversible** are predicted to increase the exposure to **triptans (zolmitriptan)**. [\[Severe\]](#) Theoretical → Also see [TABLE 13 p. 963](#)
 - ▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [\[Severe\]](#) Anecdotal → Also see [TABLE 13 p. 963](#)

Maraviroc

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Cenobamate** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **maraviroc**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
 - ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
 - ▶ **NNRTIs (efavirenz)** decrease the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
 - ▶ **NNRTIs (etravirine)** slightly decrease the exposure to **maraviroc**. Refer to specialist literature. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- Measles, mumps and rubella vaccine, live** → see live vaccines
- Mebendazole**
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [\[Moderate\]](#) Study
- Medroxyprogesterone**
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
 - ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- Mefenamic acid** → see NSAIDs
- Mefloquine** → see antimalarials
- Meglitinides** → see [TABLE 14 p. 963](#) (antidiabetic drugs)
- repaglinide

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **repaglinide**. [\[Moderate\]](#) Theoretical

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Clopidogrel** increases the exposure to **repaglinide**. Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Elxacaftor** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **meglitinides**. [\[Moderate\]](#) Theoretical
- ▶ **Fibrates** (**gemfibrozil**) increase the exposure to **repaglinide**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Iron chelators** (**deferasirox**) moderately increase the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [\[Moderate\]](#) theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Mifepristone** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [\[Mild\]](#) Theoretical
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ **Roxadustat** is predicted to increase the exposure to **repaglinide**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Selpercatinib** increases the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
- ▶ **Taxanes** (**cabazitaxel**) are predicted to affect the exposure to **repaglinide**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study
- ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
- Melatonin** → see TABLE 11 p. 962 (CNS depressant effects)
 - ▶ Antiepileptics (**phenytoin**) are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Axitinib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Givosiran** is predicted to increase the exposure to **melatonin**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Quinolones** (**ciprofloxacin**) are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs** (**fluvoxamine**) very markedly increase the exposure to **melatonin**. Avoid. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- Meloxicam** → see NSAIDs
- Melphalan** → see alkylating agents
- Memantine**
 - ▶ **Dopamine receptor agonists** (**amantadine**) increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [\[Severe\]](#) Theoretical
 - ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists** (**apomorphine**, **bromocriptine**, **cabergoline**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). [\[Moderate\]](#) Theoretical
 - ▶ **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Memantine** is predicted to increase the effects of **levodopa**. [\[Moderate\]](#) Theoretical
- Mepacrine**
 - ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials** (**primaquine**). Avoid. [\[Moderate\]](#) Theoretical
- Mepivacaine** → see anaesthetics, local
- Meptazinol** → see opioids
- Mercaptopurine** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)
 - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 617. [\[Severe\]](#) Study
 - ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
 - ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. [\[Severe\]](#) Theoretical
- Meropenem** → see carbapenems
- Mesalazine**

ROUTE-SPECIFIC INFORMATION The manufacturers of some mesalazine gastro-resistant and modified-release medicines (*Asacol MR* tablets, *Ipcol*, *Salofalk* granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.
- Metaraminol** → see sympathomimetics, vasoconstrictor
- Metformin** → see TABLE 14 p. 963 (antidiabetic drugs)
 - ▶ **Alcohol** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [\[Moderate\]](#) Theoretical
 - ▶ **Bictegravir** slightly increases the exposure to **metformin**. [\[Moderate\]](#) Study
 - ▶ **Dolutegravir** increases the exposure to **metformin**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **metformin**. [\[Moderate\]](#) Theoretical
 - ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** (**cimetidine**) increase the exposure to **metformin**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [\[Unknown\]](#) Theoretical
 - ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [\[Mild\]](#) Theoretical
 - ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [\[Moderate\]](#) Theoretical
 - ▶ **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

Metformin (continued)

- ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study

Methadone → see opioids**Methenamine**

- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Thiazide diuretics (metolazone)** are predicted to decrease the efficacy of **methenamine**. [Moderate] Theoretical

Methocarbamol → see TABLE 11 p. 962 (CNS depressant effects)**Methotrexate** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity), TABLE 5 p. 961 (thromboembolism)

- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **methotrexate**. [Mild] Study
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **methotrexate**. [Severe] Theoretical
- ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **methotrexate**. [Severe] Study
- ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 963 → Also see TABLE 5 p. 961
- ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **methotrexate**. [Moderate] Study
- ▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [Severe] Study
- ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study → Also see TABLE 2 p. 960
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960
- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal

- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 2 p. 960

Methoxy polyethylene glycol-epoetin beta → see TABLE 5 p. 961 (thromboembolism)**Methoxyflurane** → see volatile halogenated anaesthetics

- ▶ **Methyldopa** → see TABLE 8 p. 961 (hypotension)
- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ Oral **iron** decreases the effects of oral **methyldopa**. [Moderate] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 961

Methylphenidate

- ▶ **Alcohol** might increase the concentration of **methylphenidate**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** might decrease the concentration of **methylphenidate**. [Moderate] Anecdotal
- ▶ **Antiepileptics (valproate)** might enhance the effects of **methylphenidate**. [Severe] Anecdotal
- ▶ **Methylphenidate** might increase the risk of dyskinesias when given with **antipsychotics, second generation (paliperidone)**. [Severe] Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **antipsychotics, second generation (risperidone)**. [Severe] Anecdotal
- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** has been reported to cause psychotic symptoms when given with **disulfiram**. [Severe] Anecdotal
- ▶ **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors (rasagiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors (selegiline)** might increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthioninium chloride**. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **methylphenidate**. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
- ▶ **Methylphenidate** might increase the concentration of **tricyclic antidepressants**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated anaesthetics**. Avoid **methylphenidate** on day of surgery, p. 256. [Severe] Theoretical

Methylprednisolone → see corticosteroids**Methylthioninium chloride** → see TABLE 13 p. 963 (serotonin syndrome)

- ▶ **Methylthionium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthionium chloride**. [\[Severe\]](#) Theoretical
- Metoclopramide**
- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Metoclopramide** potentially decreases the absorption of **antifungals, azoles (posaconazole)** oral suspension. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to decrease the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- Metolazone** → see thiazide diuretics
- Metoprolol** → see beta blockers, selective
- Metreleptin**
- ▶ **Metreleptin** might alter the exposure to **aminophylline**. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** might alter the exposure to **ciclosporin**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** might alter the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **insulin**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Metreleptin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
- Metronidazole** → see TABLE 12 p.963 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours after stopping treatment. [\[Moderate\]](#) Study
- ▶ **Metronidazole** increases the risk of toxicity when given with **alkylating agents (busulfan)**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [\[Moderate\]](#) Study
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see TABLE 12 p.963
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [\[Severe\]](#) Study
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
- Metryrapone**
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Carbimazole** decreases the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Combined hormonal contraceptives** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical

Mexiletine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** increases the risk of cardiovascular adverse effects when given with **calcium channel blockers (diltiazem)**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **calcium channel blockers (verapamil)**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially affects the exposure to **coumarins (warfarin)**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [\[Unknown\]](#) Theoretical
- ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [\[Moderate\]](#) Theoretical

Mexiletine (continued)

- ▶ **Mexiletine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical

Mianserin → see TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
 - ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
 - ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal
- Micafungin** → see TABLE 1 p. 960 (hepatotoxicity)
- ▶ **Micafungin** slightly increases the exposure to **amphotericin B**. Avoid or monitor toxicity. [Moderate] Study

Miconazole → see antifungals, azoles**Midazolam** → see benzodiazepines**Midodrine** → see sympathomimetics, vasoconstrictor**Midostaurin**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Midostaurin** moderately decreases the exposure to the active metabolite of **bupropion**. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Midostaurin** might increase the concentration of **ciclosporin**. [Severe] Anecdotal
 - ▶ **Cobicistat** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **midostaurin**. [Severe] Study
 - ▶ **Elvitegravir** boosted with **ritonavir** is predicted to increase the exposure to **midostaurin**. [Severe] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **midostaurin** and **midostaurin** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **midostaurin**. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- Mifamurtide** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

Mifepristone

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **avatorombopag**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
 - ▶ **Mifepristone** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
 - ▶ **Mifepristone** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **opioids (alfentanil)**. [Severe] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **pioglitazone**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **siponimod**. [Moderate] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
 - ▶ **Mifepristone** moderately increases the exposure to **statins (fluvastatin)**. [Moderate] Study
 - ▶ **Mifepristone** very markedly increases the exposure to **statins (simvastatin)**. [Severe] Study
 - ▶ **Mifepristone** is predicted to increase the exposure to **sulfonyleureas (glimepiride, tolbutamide)**. [Moderate] Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to oral **temsirolimus**. [Severe] Theoretical
- Minocycline** → see tetracyclines
- Minoxidil** → see TABLE 8 p. 961 (hypotension)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Mirabegron**
- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mid] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mid] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mid] Theoretical
 - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mid] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Mid] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mid] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mid] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mid] Theoretical
- Mirtazapine** → see TABLE 13 p. 963 (serotonin syndrome), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
 - ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- Misoprostol**
- ▶ **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. [Severe] Theoretical
- Mitomycin** → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Mitotane** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Mitotane** is predicted to decrease the exposure to **5-HT₃-receptor antagonists (ondansetron)**. [Moderate] Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
 - ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
 - ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mid] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study

Mitotane (continued)

- ▶ Mitotane is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to antimalarials (**artemether**) with lumefantrine. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the concentration of antimalarials (**piperaquine**). Avoid. [Moderate] Theoretical
- ▶ Mitotane is predicted to moderately decrease the exposure to antipsychotics, second generation (**aripiprazole**). Adjust aripiprazole dose, p. 277. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to antipsychotics, second generation (**lurasidone**). Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to antipsychotics, second generation (**paliperidone**). Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to antipsychotics, second generation (**quetiapine**). [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to antipsychotics, second generation (**risperidone**). Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ Mitotane decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to benzodiazepines (**alprazolam**). Adjust dose. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to benzodiazepines (**midazolam**). Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ Mitotane slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ Mitotane is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ Mitotane is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ Mitotane moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ Mitotane is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to calcium channel blockers (**diltiazem**). [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ Mitotane decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ Mitotane is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to corticosteroids (**fluticasone**). [Unknown] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ Mitotane is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to dipeptidylpeptidase-4 inhibitors (**linagliptin**). [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mid] Study
- ▶ Mitotane is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ Mitotane affects the exposure to endothelin receptor antagonists (**bosentan**). Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to endothelin receptor antagonists (**macitentan**). Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Mitotane moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to factor XA inhibitors (**apixaban**). [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to factor XA inhibitors (**rivaroxaban**). Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 260. [Moderate] Study
- ▶ Mitotane decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study → Also see TABLE 15 p. 963

- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinitib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (nevirapine)**. [Severe] Theoretical
- ▶ **Mitotane** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osipemifene**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **piptentasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Mitotane** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 963

Mitotane (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Mitotane** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Mitoxantrone** → see anthracyclines
- Mivacurium** → see neuromuscular blocking drugs, non-depolarising
- Mizolastine** → see antihistamines, non-sedating
- Moclobemide** → see TABLE 13 p. 963 (serotonin syndrome)

FOOD AND LIFESTYLE Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented sofa bean extract, and some beers, lagers or wines).

- ▶ **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
- ▶ **Moclobemide** potentially increases the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **moclobemide**. Avoid. [Severe] Theoretical

- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose. [Mild] Study
- ▶ **Levodopa** increases the risk of adverse effects when given with **moclobemide**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Moclobemide** is predicted to increase the effects of **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **MAO-B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** increases the risk of adverse effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 13 p. 963
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Study
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Moclobemide** moderately increases the exposure to **triptans (rizatriptan, sumatriptan)**. Avoid. [Moderate] Study → Also see TABLE 13 p. 963
- ▶ **Moclobemide** slightly increases the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Study → Also see TABLE 13 p. 963

Modafinil

- ▶ **Modafinil** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical

- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [\[Mid\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
 - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Unknown\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [\[Mid\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
 - ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [\[Mid\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [\[Mid\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the exposure to **NNRTIs (dorarivine)**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [\[Severe\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **modafinil**. [\[Moderate\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
 - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
 - Mogamulizumab** → see monoclonal antibodies
 - Mometasone** → see corticosteroids
 - Monoclonal antibodies** → see TABLE 15 p. 963 (myelosuppression), TABLE 12 p. 963 (peripheral neuropathy), TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (**trastuzumab, trastuzumab emtansine**). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **trastuzumab deruxtecan**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
 - ▶ **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Tocilizumab** is predicted to decrease the exposure to **benzodiazepines (alprazolam, diazepam, midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
 - ▶ **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [\[Severe\]](#) Theoretical
 - ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. [\[Severe\]](#) Theoretical
 - ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies (**atezolizumab, ipilimumab, nivolumab, pembrolizumab**). Use with caution or avoid. [\[Severe\]](#) Theoretical

Monoclonal antibodies (continued)

- ▶ **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Bimekizumab** might affect the exposure to **coumarins (warfarin)**. [\[Moderate\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can monoclonal antibodies (**bevacizumab, trastuzumab emtansine**); concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can monoclonal antibodies (**bevacizumab, trastuzumab emtansine**); concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
- ▶ **Sarilumab** might cause severe infection and neutropenia when given with **etanercept**. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with monoclonal antibodies (**adalimumab, certolizumab pegol, golimumab, infliximab, rituximab, sarilumab, secukinumab, tocilizumab**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fungolimid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Immunoglobulins (normal immunoglobulin)** are predicted to alter the effects of **dinutuximab**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ Monoclonal antibodies (**sarilumab**) might cause severe infection and neutropenia when given with monoclonal antibodies (**adalimumab, certolizumab pegol, infliximab**). [\[Severe\]](#) Theoretical
- ▶ Monoclonal antibodies (**sarilumab**) might cause the risk of severe infection and neutropenia when given with monoclonal antibodies (**golimumab**). [\[Severe\]](#) Theoretical
- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the effects of **brentuximab vedotin**. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical

- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **spionimod**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **sirilimum**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [\[Moderate\]](#) Study
- ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ipilimumab** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. [\[Severe\]](#) Study

Montelukast

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [\[Moderate\]](#) Study
- ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **montelukast**. [\[Moderate\]](#) Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [\[Moderate\]](#) Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **montelukast**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [\[Moderate\]](#) Theoretical

Morphine → see opioids**Moxifloxacin** → see quinolones**Moxisylyte** → see TABLE 8 p. 961 (hypotension)**Moxonidine** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962

Mycophenolate

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [\[Moderate\]](#) Theoretical
- ▶ Oral **antacids** decrease the exposure to oral **mycophenolate**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [\[Moderate\]](#) Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **mycophenolate**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [\[Moderate\]](#) Theoretical

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [\[Moderate\]](#) Theoretical
 - Nabilone** → see TABLE 11 p. 962 (CNS depressant effects)
 - ▶ **Nabilone** is predicted to increase the risk of cardiovascular adverse effects when given with **amfetamines**. [\[Severe\]](#) Theoretical
 - Nabumetone** → see NSAIDs
 - Nadolol** → see beta blockers, non-selective
 - Naldemedine**
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **naldemedine**. Avoid. [\[Severe\]](#) Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
 - Nalmefene**
 - ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [\[Severe\]](#) Theoretical
 - Naloxegol**
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **naloxegol**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **naloxegol**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
 - Naltrexone**
 - ▶ **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [\[Severe\]](#) Theoretical
 - Nandrolone**
 - ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - Naproxen** → see NSAIDs
 - Naratriptan** → see triptans
 - Natalizumab** → see monoclonal antibodies
 - Nebivolol** → see beta blockers, selective
 - Nefopam** → see TABLE 10 p. 962 (antimuscarinics)
 - ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
 - Nelarabine** → see TABLE 15 p. 963 (myelosuppression)
 - Neomycin** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 19 p. 964 (ototoxicity), TABLE 20 p. 964 (neuromuscular blocking effects)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **neomycin**, the possibility of interactions should be borne in mind.
- ▶ **Neomycin** decreases the absorption of **digoxin**. [\[Moderate\]](#) Study
 - ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [\[Moderate\]](#) Study
 - Neostigmine** → see TABLE 6 p. 961 (bradycardia)

Neostigmine (continued)

- ▶ **Aminoglycosides** are predicted to decrease the effects of neostigmine. [Moderate] Theoretical

Nepafenac → see NSAIDs

Neratinib → see TABLE 1 p. 960 (hepatotoxicity)

FOOD AND LIFESTYLE Avoid pomegranate, and pomegranate juice, as it might increase the concentration of neratinib.

- ▶ **Neratinib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ Oral **antacids** are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Neratinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)**-containing antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Neratinib** might affect the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neratinib** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to neratinib. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to neratinib. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of neratinib. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to neratinib. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical
- ▶ **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). [Unknown] Study
- ▶ **Neratinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ **Neratinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 960
- ▶ **Neratinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Neratinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Neratinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 960

Netupitant → see neurokinin-1 receptor antagonists

Neurokinin-1 receptor antagonists

- aprepitant · fosaprepitant · netupitant
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [\[Severe\]](#) Study
 - ▶ **Netupitant** very slightly increases the exposure to **alkylating agents (cyclophosphamide)**. [\[Moderate\]](#) Study
 - ▶ **Netupitant** is predicted to increase the exposure to **alkylating agents (fosfamide)**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to increase the exposure to **alkylating agents (fosfamide)**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [\[Severe\]](#) Study
 - ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedronone)**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **aprepitant**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**). [\[Moderate\]](#) Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [\[Moderate\]](#) Theoretical
 - ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **benzodiazepines (alprazolam)**. [\[Severe\]](#) Study
 - ▶ **Fosaprepitant** slightly increases the exposure to **benzodiazepines (midazolam)**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **beta₂ agonists (salmeterol)**. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **brigatinib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **ceritinib**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **ciclosporin**. [\[Severe\]](#) Study
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **combined hormonal**

Neurokinin-1 receptor antagonists (continued)

- contraceptives.** For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to oral **corticosteroids (budesonide)**. [\[Moderate\]](#) Study
 - ▶ **Aprepitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Netupitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **corticosteroids (fluticasone)**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **crizotinib**. [\[Moderate\]](#) Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **netupitant**. [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [\[Mild\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **domperidone**. Avoid. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 206 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **aprepitant**. [\[Moderate\]](#) Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists (**fosaprepitant, netupitant**). [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Theoretical
 - ▶ **Netupitant** slightly increases the exposure to **etoposide**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [\[Mild\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 260. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
 - ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [\[Moderate\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 203, tezacaftor with ivacaftor p. 206, and tezacaftor with ivacaftor and elxacaftor p. 206. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH

- guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **aprepitant**. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **aprepitant**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **maraviroc**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **naloxegol**. Adjust moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **nilotinib**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **aprepitant**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists (**fosaprepitant, netupitant**). [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **pazopanib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ponatinib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **regorafenib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **selipercatinib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**). Avoid. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study

Neurokinin-1 receptor antagonists (continued)

- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **triptans (eletriptan)**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) decrease the efficacy of **ulipristal**. For FSRH guidance, see *Contraceptives*, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **vemurafenib**. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 20 p. 964 (neuromuscular blocking effects)

- atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium
- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [\[Moderate\]](#) Study
 - ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
 - ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
 - ▶ **Pancuronium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
 - ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
 - ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
 - ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
 - ▶ **Penicillins (piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
 - ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. [\[Unknown\]](#) Theoretical
- Nevirapine** → see NNRITs
- Nicardipine** → see calcium channel blockers
- Nicorandil** → see TABLE 8 p. 961 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Theoretical
 - ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Anecdotal
 - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961

Nicotinic acid → see TABLE 3 p. 960 (anticoagulant effects)

- ▶ **Nicotinic acid** might increase the risk of rhabdomyolysis when given with **statins**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [\[Moderate\]](#) Theoretical
 - ▶ Oral **antacids** might affect the absorption of oral **nilotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [\[Severe\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
 - ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mid\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **Nilotinib** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
 - ▶ **Nilotinib** is predicted to increase the exposure to **brigatinib**. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Oral **calcium salts (calcium carbonate)**-containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study

- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**.
[Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nilotinib**.
Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**.
[Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**.
Adjust **colchicine** dose with moderate CYP3A4 inhibitors.
[Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **nilotinib**.
Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dabrafenib**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **darifenacin**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**.
[Severe] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **domperidone**.
Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **elxacaftor**.
Adjust **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**.
Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **entrectinib**.
Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 635. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fedratinib**.
Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**.
Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**.
[Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose p. 260. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** might affect the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**.
Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors.
[Severe] Study → Also see TABLE 15 p. 963
- ▶ **Idelalisib** is predicted to increase the exposure to **nilotinib**.
Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **imatinib**.
[Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**.
Adjust **ivabradine** dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**.
Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 203, **tezacaftor** with **ivacaftor** p. 206, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 206. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**.
[Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Letermovir** is predicted to increase the exposure to **nilotinib**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**.
Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**.
[Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **naldemedine**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**.
Adjust **naloxegol** dose and monitor adverse effects. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **neratinib**.
Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **nilotinib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**.
Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**.
[Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **pemigatinib**.
[Severe] Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**.
Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**.
Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ponatinib**.
[Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**.
[Severe] Study → Also see TABLE 9 p. 962

Nilotinib (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Nimodipine → see calcium channel blockers

Nintedanib → see TABLE 4 p. 960 (antiplatelet effects)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, phenytoin)** are predicted to decrease the exposure to **nintedanib**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Neratinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- Niraparib** → see TABLE 15 p. 963 (myelosuppression)

Nirmatrelvir

- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **abemaciclib**. Avoid or adjust **abemaciclib** dose. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **afatinib**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **alpha blockers (alfuzosin)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **amfetamines**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antiarrhythmics (amiodarone, dronedarone, flecainide, propafenone)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antiarrhythmics (lidocaine)**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antiepileptics (lamotrigine, valproate)**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antifungals, azoles (isavuconazole)**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir increases the exposure to **antifungals, azoles (itraconazole)**. [Severe] Study

- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antifungals, azoles (ketoconazole)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antifungals, azoles (voriconazole)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antimalarials (atovaquone)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antipsychotics, second generation (clozapine, lurasidone, quetiapine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antipsychotics, second generation (risperidone)**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bedaquiline**. Avoid or monitor. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (alprazolam)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (clonazepam, diazepam, flurazepam)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (midazolam)**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **beta₂ agonists (salmeterol)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **bupropion**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **buspirone**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **calcium channel blockers**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ceritinib**. Avoid or adjust ceritinib dose. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ciclosporin**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **colchicine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **combined hormonal contraceptives** (containing ethinylestradiol). Use additional contraceptive precautions. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects and consider beclometasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to affect the concentration of **coumarins (warfarin)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dasatinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **delamanid**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **encorafenib**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **endothelin receptor antagonists (bosentan)**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **everolimus**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fastamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fusidate**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **glecaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **grazoprevir**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **haloperidol**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ibrutinib**. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lomitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **macrolides (erythromycin)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **methylphenidate**. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [\[Severe\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **neratinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **NNRTIs (efavirenz)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **NSAIDs (piroxicam)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **opioids (buprenorphine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **opioids (fentanyl)**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **opioids (methadone)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **opioids (morphine)**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **opioids (pethidine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (tadalafil)**. Adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pimozide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ranolazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [\[Severe\]](#) Study

Nirmatrelvir (continued)

- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **rifamycins (rifabutin)**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **sirolimus**. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **statins (atorvastatin, rosuvastatin)**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **statins (simvastatin)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir might decrease the efficacy of **thyroid hormones (levothyroxine)**. [\[Moderate\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **tricyclic antidepressants (amitriptyline, imipramine, nortriptyline)**. [\[Moderate\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **vinca alkaloids (vinblastine, vincristine)**. [\[Severe\]](#) Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **zolidem**. [\[Severe\]](#) Theoretical

Nitisinone

- ▶ Nitisinone is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nitisinone is predicted to increase the exposure to **cephalosporins (cefaclor)**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nitisinone is predicted to increase the exposure to **coumarins (warfarin)**. [\[Moderate\]](#) Study
- ▶ Nitisinone is predicted to increase the exposure to **gancliclovir**. [\[Moderate\]](#) Study
- ▶ Nitisinone is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nitisinone is predicted to increase the exposure to **loop diuretics (furosemide)**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nitisinone is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Nitisinone is predicted to increase the exposure to **NSAIDs (celecoxib)**. [\[Moderate\]](#) Study

- ▶ Nitisinone is predicted to increase the exposure to **oseltamivir**. [\[Moderate\]](#) Study
 - ▶ Nitisinone is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to nitisinone. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Nitisinone is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [\[Moderate\]](#) Study
- Nitrates** → see TABLE 7 p. 961 (first-dose hypotension), TABLE 8 p. 961 (hypotension)

glyceryl trinitrate · isosorbide dinitrate · isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Acetylcysteine** might increase the vasodilatory effects of **glyceryl trinitrate**. [\[Moderate\]](#) Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 961

Nitrazepam → see benzodiazepines

Nitrofurantoin → see TABLE 12 p. 963 (peripheral neuropathy)

- ▶ Nitrofurantoin is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ Nitrofurantoin is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ Oral **magnesium trisilicate** decreases the absorption of oral nitrofurantoin. [\[Moderate\]](#) Study
- ▶ **Nitroprusside** → see TABLE 8 p. 961 (hypotension)
- ▶ Nitroprusside is predicted to increase the risk of methaemoglobinaemia when given with **anaesthetics, local (prilocaine)**. [\[Severe\]](#) Theoretical
- ▶ Nitroprusside is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical

Nitrous oxide → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ Nitrous oxide potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [\[Severe\]](#) Study

Nivolumab → see monoclonal antibodies

Nizatidine → see H₂ receptor antagonists

NNRTIs → see TABLE 9 p. 962 (QT-interval prolongation)

doravirine · efavirenz · etravirine · nevirapine · rilpivirine

- ▶ **Efavirenz** is predicted to decrease the exposure to **abrocitinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **acalabrutinib**. [\[Severe\]](#) Study
- ▶ Oral **antacids** are predicted to decrease the exposure to oral rilpivirine. Rilpivirine should be taken 4 hours before or 2 hours after antacids. [\[Severe\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to doravirine. Avoid. [\[Severe\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to etravirine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to nevirapine. [\[Severe\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** markedly decrease the exposure to rilpivirine. Avoid. [\[Severe\]](#) Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [\[Severe\]](#) Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to antiepileptics (**carbamazepine**). [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Theoretical
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] theoretical
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**phenobarbital**) are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**phenobarbital**). [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **nevirapine**. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the efficacy of antiepileptics (**primidone**) and antiepileptics (**primidone**) are predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**) slightly to moderately increase the exposure to **nevirapine**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **Nevirapine** moderately decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**ketoconazole**). [Severe] Study
- ▶ **Nevirapine** moderately decreases the exposure to antifungals, azoles (**ketoconazole**). Avoid. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) slightly increase the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Nevirapine** is predicted to decrease the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Efavirenz** decreases the concentration of antimalarials (**artemether**). [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Etravirine** decreases the exposure to antimalarials (**artemether**). [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antimalarials (**atovaquone**). Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to antimalarials (**proguanil**). Avoid. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to antipsychotics, second generation (**lurasidone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to antipsychotics, second generation (**quetiapine**). [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **axitinib**. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of benzodiazepines (**alprazolam**). [Moderate] Theoretical
- ▶ **Etravirine** has been reported to increase the concentration of benzodiazepines (**clonazepam**). [Moderate] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the concentration of benzodiazepines (**clonazepam**) and benzodiazepines (**clonazepam**) are predicted to decrease the concentration of **nevirapine**. [Moderate] Theoretical
- ▶ **Etravirine** is predicted to increase the exposure to benzodiazepines (**diazepam**). Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to alter the effects of benzodiazepines (**midazolam**). Avoid. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of benzodiazepines (**midazolam**). Monitor and adjust dose. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to calcium channel blockers (**amifodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Oral calcium salts (**calcium carbonate**) -containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ceritinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 566. [Severe] Study
- ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **rilpivirine**. Avoid multiple-dose dexamethasone. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical

NNRTIs (continued)

- ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Efavirenz** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 471. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **gefatinib**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, etravirine, nevirapine**) are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H₂ receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **letemrovir**. [Moderate] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **letemrovir**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nevirapine**. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** slightly increase the exposure to **etravirine**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) decrease the exposure to **macrolides (clarithromycin)**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Etravirine** slightly decreases the exposure to **maraviroc**. Refer to specialist literature. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **midostaurin**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant, netupitant)**. [Moderate] Theoretical

- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p.962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **efavirenz**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to NNRTIs (**doravirine**). Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ NNRTIs (**etravirine**) are predicted to decrease the exposure to NNRTIs (**doravirine**). Avoid. [Severe] Theoretical
- ▶ NNRTIs (**nevirapine**) decrease the concentration of NNRTIs (**efavirenz**). Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz**) are predicted to decrease the exposure to NNRTIs (**etravirine**). Avoid. [Severe] Study
- ▶ NNRTIs (**nevirapine**) are predicted to decrease the exposure to NNRTIs (**etravirine**). Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, etravirine, nevirapine**) are predicted to decrease the exposure to NNRTIs (**rilpivirine**). Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **norethisterone**. ForFSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to slightly decrease the exposure to **NRTIs (zidovudine)**. Refer to specialist literature. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** moderately decreases the exposure to **opioids (buprenorphine)**. Adjust dose. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p.962
- ▶ **Etravirine** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p.962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **pazopanib**. [Severe] Study → Also see TABLE 9 p.962
- ▶ **Efavirenz** is predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to **efavirenz**. Avoid or monitor. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p.962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mild] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ponatinib**. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to oral **rilpivirine**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **regorafenib**. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ **Rifamycins (rifabutin)** moderately decrease the exposure to **doravirine**. Adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** decrease the exposure to **etravirine**. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** modestly decrease the exposure to **rilpivirine**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to **rifamycins (rifabutin)**. Adjust dose. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 590. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **rilpivirine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ **St John's wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to NNRTIs (**doravirine, rilpivirine**). Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of NNRTIs (**efavirenz, nevirapine**). Avoid. [Severe] Theoretical
- ▶ **Etravirine** slightly decreases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Etravirine** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust dose. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **statins (simvastatin)**. Adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p.962
- ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 591. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
- ▶ **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical

NNRTIs (continued)

- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **vandetanib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **vemurafenib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone

- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. [Severe] Theoretical

Normal immunoglobulin → see immunoglobulins

Nortriptyline → see tricyclic antidepressants

NRTIs → see TABLE 2 p. 960 (nephrotoxicity), TABLE 12 p. 963 (peripheral neuropathy)

abacavir · emtricitabine · lamivudine · zidovudine

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ Antiepileptics (**valproate**) slightly increase the exposure to **zidovudine**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**) slightly increase the exposure to **zidovudine**. [Moderate] Study
- ▶ Antimalarials (**pyrimethamine**) are predicted to increase the risk of adverse effects when given with **zidovudine**. [Severe] Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [Severe] Theoretical

- ▶ HIV-protease inhibitors (**tipranavir**) slightly decrease the exposure to **abacavir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**tipranavir**) slightly decrease the exposure to **zidovudine**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ NNRTIs (**nevirapine**) are predicted to slightly decrease the exposure to **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- ▶ NRTIs (**zidovudine**) increase the risk of toxicity when given with NRTIs (**lamivudine**). [Severe] Anecdotal
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [Severe] Study → Also see TABLE 2 p. 960
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical
- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study

NSAIDs → see TABLE 18 p. 964 (hyponatraemia), TABLE 2 p. 960 (nephrotoxicity), TABLE 16 p. 964 (celestroxium potassium), TABLE 4 p. 960 (antiplatelet effects)

aceclofenac · benzydamine · bromfenac · celecoxib · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · phenazone · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tofenamic acid

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of NSAIDs, the possibility of interactions should be borne in mind.

- ▶ **Celecoxib** is predicted to increase the exposure to antiarrhythmics (**flecainide, propafenone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**) moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**) increase the exposure to **parecoxib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**voriconazole**) slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**voriconazole**) moderately increase the exposure to **ibuprofen**. Adjust dose. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to NSAIDs (**celecoxib, diclofenac**). Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **diclofenac**. [Severe] Study → Also see TABLE 2 p. 960 → Also see TABLE 16 p. 964
- ▶ **Sulindac** might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Etoricoxib** increases the exposure to **combined hormonal contraceptives**. [Moderate] Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Indometacin** increases the concentration of **digoxin**. [Severe] Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Etoricoxib** increases the exposure to **hormone replacement therapy**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ **Diclofenac** is predicted to increase the exposure to **iron chelators (deferiprone)**. [Moderate] Theoretical

- ▶ **Leflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [\[Moderate\]](#) Theoretical
 - ▶ NSAIDs increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ NSAIDs are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Study → Also see TABLE 2 p. 960
 - ▶ NSAIDs (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. [\[Severe\]](#) Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **piroxicam**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Nitisinone** is predicted to increase the exposure to **celecoxib**. [\[Moderate\]](#) Study
 - ▶ NRTIs (**zidovudine**) increase the risk of haematological toxicity when given with NSAIDs. [\[Severe\]](#) Study → Also see TABLE 2 p. 960
 - ▶ NSAIDs are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 960
 - ▶ NSAIDs potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical
 - ▶ **Mefenamic acid** is predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 960
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to NSAIDs (celecoxib, diclofenac, etoricoxib). [\[Moderate\]](#) Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [\[Moderate\]](#) Theoretical
 - ▶ NSAIDs increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 964
 - Obeticholic acid**
 - ▶ **Obeticholic acid** decreases the anticoagulant effect of **coumarins (warfarin)**. [\[Severe\]](#) Study
 - ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
 - ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [\[Severe\]](#) Theoretical
 - Obinutuzumab** → see monoclonal antibodies
 - Ocrelizumab** → see monoclonal antibodies
 - Octreotide**
 - ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust ciclosporin dose, p. 588. [\[Severe\]](#) Anecdotal
 - ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [\[Moderate\]](#) Study
 - Ofatumumab** → see monoclonal antibodies
 - Oloxacin** → see quinolones
 - Olanzapine** → see antipsychotics, second generation
 - Olaparib** → see TABLE 15 p. 963 (myelosuppression)
- FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to olaparib.
- ▶ **Olaparib** might increase the exposure to **aliskiren**. [\[Moderate\]](#) Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Study
 - ▶ **Olaparib** might increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **antipsychotics, second generation (quetiapine)**. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **ciclosporin**. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Study
 - ▶ **Olaparib** might increase the exposure to **colchicine**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Moderate\]](#) Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **ergometrine**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **ergotamine**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [\[Moderate\]](#) Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **NRRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **opioids (alfentanil)**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **pimozide**. [\[Moderate\]](#) Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might increase the exposure to **sirinilimus**. [\[Moderate\]](#) Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** is predicted to increase the exposure to **statins**. [\[Moderate\]](#) Theoretical
 - ▶ **Olaparib** might alter the exposure to **tacrolimus**. [\[Moderate\]](#) Theoretical

Olaparib (continued)

- ▶ **Olaparib** might increase the exposure to **talazoparib**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Olaparib** might increase the exposure to **taxanes (docetaxel, paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Olaparib** might alter the exposure to **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Olaparib** might increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
 - ▶ **Olaparib** might increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- Olmesartan** → see angiotensin-II receptor antagonists
- Olodaterol** → see beta₂ agonists
- Omega-3-acid ethyl esters** → see TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, non-selective**. [Moderate] Study
 - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, selective**. [Moderate] Study

Omeprazole → see proton pump inhibitors

Ondansetron → see 5-HT₃-receptor antagonists

Opicapone

- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Theoretical

Opioids → see TABLE 6 p. 961 (bradycardia), TABLE 13 p. 963

(serotonin syndrome), TABLE 9 p. 962 (QT-interval

prolongation), TABLE 11 p. 962 (CNS depressant effects)

alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · pentazocine · pethidine · remifentanyl · tapentadol · tramadol

- ▶ **Alcohol** causes rapid release of opioids (**hydromorphone, morphine**) from extended-release preparations. Avoid. [Severe] Study → Also see TABLE 11 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **fentanyl**. [Moderate] Theoretical → Also see TABLE 6 p. 961
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl,**

oxycodone). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961

- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **methadone**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **opioids**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal → Also see TABLE 11 p. 962
- ▶ **Bertralstat** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [Moderate] Study
- ▶ **Bictegravir** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of opioids (**alfentanil, fentanyl**). Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 961
- ▶ **Bupropion** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **tramadol**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961
- ▶ **Cenobamate** is predicted to decrease the exposure to **alfentanil**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 962
- ▶ **Ceritinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 961

- ▶ **Dabrafenib** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Tapentadol** is predicted to increase the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 963). [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Entrectinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). [\[Mild\]](#) Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **alfentanil**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **fentanyl**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** boosted with **ritonavir** are predicted to decrease the exposure to **methadone**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **morphine**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** increase the risk of CNS toxicity when given with **pthidine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **methadone**. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Lorlatinib** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **methadone**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 962
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **MAO-B inhibitors (rasagiline)** are predicted to increase the risk of adverse effects when given with **pthidine**. Avoid and for 14 days after stopping **rasagiline**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **pthidine**. Avoid and for 1 week after stopping **safinamide**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963
- ▶ **MAO-B inhibitors (selegiline)** increase the risk of adverse effects when given with **pthidine**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 963
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Study → Also see TABLE 13 p. 963
- ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mifepristone** is predicted to increase the exposure to **alfentanil**. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Naimefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 962
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **fentanyl**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to decrease the concentration of **methadone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to decrease the concentration of **morphine**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **pthidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **buprenorphine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** decrease the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 962
- ▶ **Olaparib** might alter the exposure to **alfentanil**. [\[Moderate\]](#) Theoretical
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**). [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 962
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone**). [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963 → Also see TABLE 11 p. 962
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, pentazocine, pethidine, remifentanyl, tapentadol, tramadol**). [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 962
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**pthidine, remifentanyl, tapentadol, tramadol**). [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 963 → Also see TABLE 11 p. 962
- ▶ **Opioids** might increase the risk of adverse effects when given with **ozanimod**. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 961
- ▶ **Palbociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Pemigatinib** might decrease the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **morphine**. [\[Mild\]](#) Theoretical

Opioids (continued)

- ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to opioids (**codeine, morphine**). [Moderate] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Selpercatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine**). Avoid. [Moderate] Study
 - ▶ **Sotorasib** is predicted to decrease the exposure to **alfentanil**. Avoid or adjust dose. [Moderate] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 963
 - ▶ **St John's wort** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 963
 - ▶ **St John's wort** moderately decreases the exposure to **oxycodone**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **tramadol**. [Severe] Study
 - ▶ **Tucatinib** is predicted to increase the exposure to **alfentanil**. Avoid or adjust dose. [Moderate] Theoretical
- Opium** → see interactions of codeine and morphine under opioids

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine

- ▶ **Orphenadrine** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **orphenadrine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Osetamivir

- ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study

Osilodrostat

- ▶ **Osilodrostat** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Osilodrostat** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 962

- ▶ **Osilodrostat** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
 - ▶ **Osilodrostat** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
 - ▶ **Cobicistat** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
 - ▶ **Osilodrostat** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Osilodrostat** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
 - ▶ **Osilodrostat** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Osilodrostat** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
 - ▶ **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Osilodrostat** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Osilodrostat** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 324. [Moderate] Theoretical
- Osimertinib** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Osimertinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
 - ▶ **Osimertinib** is predicted to increase the exposure to **loperamide**. [Moderate] Study

- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Osimertinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Severe] Study
- ▶ **Osimertinib** causes a small increase in the exposure to **statins (rosuvastatin)**. [Severe] Study
- ▶ **Osimertinib** is predicted to increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Osimertinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. [Moderate] Study
- ▶ **Osimertinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ **Osimertinib** is predicted to increase the exposure to **topotecan**. [Moderate] Study

Ospemifene

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- Oxaliplatin** → see platinum compounds
- Oxazepam** → see benzodiazepines
- Oxcarbazepine** → see antiepileptics
- Oxybuprocaine** → see anaesthetics, local
- Oxybutynin** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **oxybutynin**; concurrent use might

- increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study

Oxycodone → see opioids

Oxymetholone

- ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal

Oxytetracycline → see tetracyclines

Oxytocin

- ▶ **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. [Severe] Theoretical

Ozanimod → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)

FOOD AND LIFESTYLE Tyramine-rich foods might increase the risk of hypertensive crisis when given ozanimod.

- ▶ **Ciclosporin** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **Clopidogrel** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod**. [Severe] Theoretical
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-B inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
 - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
 - ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. [Severe] Theoretical
 - ▶ **Opioids** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **SNRIs (duloxetine)** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
 - ▶ **SRIs** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
 - ▶ **Terflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- Paclitaxel** → see taxanes
- Palbociclib** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study

Palbociclib (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Palbociclib** increases the exposure to **benzodiazepines** (**midazolam**). [Moderate] Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Palbociclib** is predicted to increase the exposure to **opioids** (**alfentanil**, **fentanyl**). Adjust dose. [Moderate] Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
 - ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
- Paliperidone** → see antipsychotics, second generation
- Palonosetron** → see 5-HT₃-receptor antagonists
- Pamidronate** → see bisphosphonates
- Pancreatin**
- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical
- Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- Panitumumab** → see monoclonal antibodies
- Panobinostat** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics** (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers**, **selective** (**metoprolol**). Monitor and adjust dose. [Moderate] Theoretical

- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers**, **selective** (**nebivolol**). Monitor and adjust dose. [Mild] Theoretical
- ▶ **Calcium channel blockers** (**verapamil**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Macrolides** (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962

Pantoprazole → see proton pump inhibitors

Paracetamol → see TABLE 1 p. 960 (hepatotoxicity)

- ▶ **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [Severe] Study → Also see TABLE 1 p. 960
 - ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents** (**busulfan**). [Moderate] Theoretical
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics**, **local** (**prilocaine**). Use with caution or avoid. [Severe] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 960
 - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
 - ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
 - ▶ **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **penicillins** (**flucloxacillin**). [Severe] Anecdotal → Also see TABLE 1 p. 960
 - ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
 - ▶ **Rifamycins** (**rifampicin**) decrease the exposure to **paracetamol**. [Moderate] Study
- Paraldehyde** → see antiepileptics
- Parathyroid hormone**
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- Parecoxib** → see NSAIDs

Paricalcitol → see vitamin D substances

Paroxetine → see SSRIs

Pasireotide → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)

▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

Patimor

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

Pazopanib → see TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)

▶ Oral **antacids** are predicted to decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study

▶ Oral **calcium salts (calcium carbonate)** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study

▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Dabrafenib** is predicted to decrease the exposure to **pazopanib**. [Severe] Study

▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pazopanib**. [Severe] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical

▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study

▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 4 p. 960

▶ **Lapatinib** increases the exposure to **pazopanib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

▶ **Letermovir** is predicted to increase the exposure to **pazopanib**. [Moderate] Study

▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study

▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 962

▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pazopanib**. [Severe] Study → Also see TABLE 9 p. 962

▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study

▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

▶ **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical

▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical

▶ **St John's wort** is predicted to decrease the exposure to **pazopanib**. [Severe] Study

▶ **Pazopanib** might affect the exposure to **statins (atorvastatin, pravastatin, rosuvastatin)**. [Moderate] Theoretical

▶ **Pazopanib** might cause increased ALT concentrations when given with **statins (simvastatin)**. [Moderate] Study

Pegaspargase → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)

▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 963

▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963

▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963

Peginterferon alfa → see interferons

Pembrolizumab → see monoclonal antibodies

Pemetrexed → see TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity)

▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **pemetrexed**. [Severe] Theoretical

▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 960

Pemigatinib

▶ **Pemigatinib** might increase the exposure to the active metabolite of **alkylating agents (cyclophosphamide)**. [Moderate] Theoretical

▶ **Pemigatinib** might decrease the exposure to **alkylating agents (ifosfamide)**. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study

▶ **Cobicistat** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study

▶ **Pemigatinib** might increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study

▶ **Dabrafenib** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study

Pemigatinib (continued)

- **Pemigatinib** might increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
 - **Pemigatinib** might increase the exposure to **everolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - **Pemigatinib** might increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - **Grapefruit** and grapefruit juice is predicted to increase the exposure to **pemigatinib**. Avoid. [Severe] Study
 - **HIV-protease inhibitors** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
 - **Idelalisib** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
 - **Imatinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - **Letermovir** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - **Macrolides (clarithromycin)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose. [Severe] Study
 - **Macrolides (erythromycin)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - **Mitotane** is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
 - **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - **Nilotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
 - **NNRTIs (efavirenz)** are predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to **NNRTIs (efavirenz)**. Avoid or monitor. [Severe] Study
 - **NNRTIs (nevirapine)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
 - **Pemigatinib** might decrease the exposure to **opioids (methadone)**. [Moderate] Theoretical
 - **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. [Moderate] Theoretical
 - **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. [Severe] Anecdotal
 - **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
 - **Pemigatinib** might increase the exposure to **sirinolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
 - **St John's wort** is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
 - **Pemigatinib** might increase the exposure to **thrombin inhibitors (dabigatran)**. Separate administration by at least 6 hours. [Moderate] Theoretical
- Penicillamine** → see TABLE 2 p. 960 (nephrotoxicity)
- Oral **antacids** decrease the absorption of oral **penicillamine**. Separate administration by 2 hours. [Mid] Study
 - **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
 - **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
 - **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
 - Oral **iron** is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. [Mid] Study
 - **Zinc** is predicted to decrease the absorption of **penicillamine**. [Mid] Theoretical

Penicillins → see TABLE 1 p. 960 (hepatotoxicity)

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · fluclouxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin

- **Allopurinol** increases the risk of skin rash when given with penicillins (**amoxicillin, ampicillin**). [Moderate] Study
 - **Antiepileptics (valproate)** increase the risk of adverse effects when given with **pivmecillinam**. Avoid. [Severe] Anecdotal
 - **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
 - **Leflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Theoretical
 - **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 960
 - **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
 - **Nitisinone** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
 - **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **fluclouxacillin**. [Severe] Anecdotal → Also see TABLE 1 p. 960
 - **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - **Piperacillin** increases the effects of **suxamethonium**. [Moderate] Study
 - **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
- Pentamidine** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 9 p. 962 (QT-interval prolongation)
- **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 960
- Pentazocine** → see opioids
- Pentostatin** → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)
- **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 963 → Also see TABLE 5 p. 961
 - **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- Pentoxifylline**
- **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
 - **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [Moderate] Study
 - **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
 - **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study
- Peppermint**
- **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Perampanel** → see antiepileptics
- Pericyazine** → see phenothiazines
- Perindopril** → see ACE inhibitors
- Pertuzumab** → see monoclonal antibodies
- Pethidine** → see opioids
- Phenazone** → see NSAIDs
- Phenelzine** → see MAOIs, irreversible
- Phenindione** → see TABLE 3 p. 960 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, herbal feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- **Ceritinib** is predicted to increase the exposure to **phenindione**. [Severe] Theoretical

- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
 - ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **phenindione**. [Moderate] Study
 - ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
 - ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [Severe] Anecdotal
 - ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
 - ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
 - ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
 - ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study
- Phenobarbital** → see antiepileptics
- Phenothiazines** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
- chlorpromazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine
- FOOD AND LIFESTYLE** **Chlorpromazine** dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
 - ▶ Oral **antacids** decrease the absorption of oral **phenothiazines**. [Moderate] Anecdotal
 - ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **phenothiazines**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
 - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
 - ▶ **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
 - ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962 → Also see TABLE 10 p. 962
 - ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 961
 - ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 962
 - ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Chlorpromazine** decreases the effects of **metrapone**. Avoid. [Moderate] Theoretical
 - ▶ **Mexiletine** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
 - ▶ **Moclobemide** increases the risk of adverse effects when given with **levomepromazine**. [Moderate] Study
 - ▶ **Osilodrostat** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
 - ▶ **Rucaparib** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- Phenoxymethylpenicillin** → see penicillins
- Phenylephrine** → see sympathomimetics, vasoconstrictor
- Phenytoin** → see antiepileptics
- Pholcodine**
- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- Phosphate**
- ▶ **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. [Moderate] Theoretical
- Phosphodiesterase type-4 inhibitors**
- apremilast · roflumilast
- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [Moderate] Study
 - ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
 - ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
 - ▶ **Osilodrostat** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study

Phosphodiesterase type-4 inhibitors (continued)

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
- ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical

Phosphodiesterase type-5 inhibitors → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation)

avanafil · sildenafil · tadalafil · vardenafil

- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 961
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 8 p. 961
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Cenobamate** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, sildenafil, vardenafil**). Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 131. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or

- adjust **sildenafil** dose, p. 131. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [Severe] Study → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 131. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [Severe] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sildenafil**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tadalafil**. Adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Nitrate**s potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Study → Also see TABLE 8 p. 961
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **NNRTIs (etravirine)** moderately decrease the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
 - ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [Moderate] Theoretical
 - ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 961
 - ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
 - ▶ **Tucatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid or adjust dose. [Moderate] Theoretical
- ### Pibrentasvir
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with glecaprevir increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **sirolimus**. [Moderate] Study

Pibrentasvir (continued)

- ▶ **St John's wort** is predicted to decrease the exposure to pibrentasvir. Avoid. [Severe] Study
- ▶ Pibrentasvir with glecaprevir markedly increases the exposure to statins (**atorvastatin**). Avoid. [Severe] Study
- ▶ Pibrentasvir with glecaprevir is predicted to increase the exposure to statins (**fluvastatin**). [Moderate] Theoretical
- ▶ Pibrentasvir with glecaprevir moderately increases the exposure to statins (**pravastatin**). Use with caution and adjust pravastatin dose. [Moderate] Study
- ▶ Pibrentasvir with glecaprevir moderately increases the exposure to statins (**rosuvastatin**). Use with caution and adjust rosuvastatin dose, p. 146. [Moderate] Study
- ▶ Pibrentasvir with glecaprevir moderately increases the exposure to statins (**simvastatin**). Avoid. [Moderate] Study
- ▶ Pibrentasvir with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
- ▶ Pibrentasvir with glecaprevir is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ Pibrentasvir with glecaprevir increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Moderate] Study
- ▶ Pibrentasvir with glecaprevir is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to pibrentasvir. [Moderate] Theoretical

Pilocarpine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus

- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical pimecrolimus. [Moderate] Study
- ▶ Pimecrolimus is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedaronic)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to pimozide. Avoid. [Moderate] Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can pimozide; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Berotrastat** is predicted to increase the exposure to pimozide. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Ceritinib** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Cobicistat** is predicted to increase the exposure to pimozide. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962 → Also see TABLE 10 p. 962
- ▶ **Grapefruit juice** increases the exposure to pimozide. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to pimozide. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to pimozide. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical

- ▶ **Larotrectinib** is predicted to increase the exposure to pimozide. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 961
- ▶ **Lorlatinib** is predicted to decrease the exposure to pimozide. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of pimozide. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might alter the exposure to pimozide. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to pimozide. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to pimozide. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Pitolisant** is predicted to decrease the exposure to pimozide. Avoid. [Severe] Theoretical
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to pimozide. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Rucaparib** is predicted to increase the exposure to pimozide. Monitor and adjust dose. [Moderate] Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see TABLE 14 p. 963 (antidiabetic drugs)

- ▶ **Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Clopidogrel** increases the exposure to pioglitazone. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with pioglitazone. [Moderate] Theoretical
 - ▶ **Fibrates (gemfibrozil)** increase the exposure to pioglitazone. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to pioglitazone. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to pioglitazone. [Moderate] Study
 - ▶ **Mifepristone** is predicted to increase the exposure to pioglitazone. [Moderate] Theoretical
 - ▶ **Opicapone** is predicted to increase the exposure to pioglitazone. Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to pioglitazone. Monitor and adjust dose. [Moderate] Study
 - ▶ **St John's wort** slightly decreases the exposure to pioglitazone. [Mild] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to pioglitazone. [Moderate] Study
- Piperacillin** → see penicillins
- Piperazine** → see antimalarials
- Pirfenidone**
- FOOD AND LIFESTYLE** Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
 - ▶ **Axitinib** is predicted to increase the exposure to pirfenidone. [Moderate] Theoretical
 - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical

- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Oslodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
 - ▶ **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
 - ▶ **Terflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- Piroxicam** → see NSAIDs
- Pitolisant**
- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mid] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mid] Theoretical
 - ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
 - ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
 - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **meglitinides (repaglinide)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mid] Theoretical
 - ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
 - ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **NRRTs (efavirenz)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
 - ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **SNRIs (venlafaxine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mid] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Mid] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mid] Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mid] Theoretical
- Pivmecillinam** → see penicillins
- Pixantrone** → see anthracyclines
- Pizotifen** → see antihistamines, sedating
- Platinum compounds** → see TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity), TABLE 19 p. 964 (ototoxicity), TABLE 12 p. 963 (peripheral neuropathy)
- carboplatin · cisplatin · oxaliplatin
- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Polatuzumab vedotin** → see monoclonal antibodies
- Polymyxin b** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 20 p. 964 (neuromuscular blocking effects)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.
- Polystyrene sulfonate**
- SEPARATION OF ADMINISTRATION** Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.
- ▶ Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. [Severe] Anecdotal
- Pomalidomide** → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose. [Moderate] Theoretical

Pomalidomide (continued)

- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to pomalidomide. Adjust pomalidomide dose. [Moderate] Study
- Ponatinib** → see TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Ponatinib** might affect the effects of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to ponatinib. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to ponatinib. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to ponatinib. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to ponatinib. [Moderate] Study → Also see TABLE 4 p. 960
- ▶ **Letermovir** is predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ponatinib. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to ponatinib. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to ponatinib. Avoid. [Severe] Theoretical
- Ponesimod** → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to ponesimod. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to ponesimod. [Moderate] Theoretical
- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. Avoid and for 1 week after stopping ponesimod. [Severe] Theoretical
- ▶ **Mitotane** might decrease the exposure to ponesimod. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to ponesimod. [Moderate] Theoretical

Posaconazole → see antifungals, azoles

Potassium aminobenzoate → see TABLE 16 p. 964 (increased serum potassium)

- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical

Potassium canrenoate → see TABLE 16 p. 964 (increased serum potassium)

Potassium chloride → see TABLE 16 p. 964 (increased serum potassium)

Potassium citrate

- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 964 (hyponatraemia), TABLE 16 p. 964 (increased serum potassium)

amiloride · triamterene

▶ **Triamterene** potentially increases the clearance of **lithium**. [Moderate] Study

Pramipexole → see dopamine receptor agonists

Prasugrel → see TABLE 4 p. 960 (antiplatelet effects)

- ▶ **Selumetinib** might increase the risk of bleeding when given with **prasugrel**. [Severe] Theoretical

Pravastatin → see statins

Praziquantel

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Antimalarials (chloroquine)** moderately decrease the exposure to praziquantel. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Corticosteroids (dexamethasone)** decrease the exposure to praziquantel. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to praziquantel. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to praziquantel. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study

Prazosin → see alpha blockers

Prednisolone → see corticosteroids

Pregabalin → see antiepileptics

Pridrolol → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **pridrolol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Prilocaine → see anaesthetics, local

Primaquine → see antimalarials

Primidone → see antiepileptics

Procarbazine → see TABLE 15 p. 963 (myelosuppression)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or

fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **procarbazine**. [Moderate] Anecdotal
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Prochlorperazine → see phenothiazines

Procyclidine → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **procyclidine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **SSRIs (paroxetine)** slightly increase the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study

Progestogen-only contraceptives
▶ **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical

Proguanil → see antimalarials

Promazine → see phenothiazines

Promethazine → see antihistamines, sedating

Propafenone → see antiarrhythmics

Propranolol → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **propranolol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Propiverine** → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

- ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

- ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

- ▶ **Macrolides (clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

Propofol → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [Severe] theoretical
- ▶ **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical

Propranolol → see beta blockers, non-selective

Propylthiouracil

- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

Proton pump inhibitors

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Moderate] Study
- ▶ **Pantoprazole** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide)** markedly decrease the exposure to **omeprazole**. Avoid or monitor. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to proton pump inhibitors (**lansoprazole, rabeprazole**). Avoid or monitor. [Mild] Study
- ▶ **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole, omeprazole**). Adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** oral suspension. Avoid. [Moderate] Study
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Cenobamate** moderately increases the exposure to **omeprazole**. Adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Study
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **daclatasvir**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** moderately increases the exposure to **omeprazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to oral **NRRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. [Severe] Anecdotal
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 639. [Moderate] Study

Proton pump inhibitors (continued)

- ▶ Proton pump inhibitors (**esomeprazole**, **omeprazole**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461, sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Proton pump inhibitors (**esomeprazole**, **omeprazole**) are predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir. [\[Moderate\]](#) Study

Proxymetacaine → see anaesthetics, local

Pseudoephedrine → see sympathomimetics, vasoconstrictor

Pyrazinamide

- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with pyrazinamide. [\[Moderate\]](#) Theoretical

Pyridostigmine → see TABLE 6 p. 961 (bradycardia)

- ▶ **Aminoglycosides** are predicted to decrease the effects of pyridostigmine. [\[Moderate\]](#) Theoretical

Pyrimethamine → see antimalarials

Quetiapine → see antipsychotics, second generation

Quinagolide → see dopamine receptor agonists

Quinapril → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see TABLE 9 p. 962 (QT-interval prolongation)

ciprofloxacin · delafloxacin · levofloxacin · moxifloxacin · ofloxacin

- ▶ Avoid concurrent administration of dairy products and mineral-fortified drinks with **oral ciprofloxacin** due to reduced exposure.
- ▶ Since systemic absorption can follow topical application of **ciprofloxacin**, **levofloxacin**, and **ofloxacin**, the possibility of interactions should be borne in mind.
- ▶ Interactions do not generally apply to topical use of **moxifloxacin** unless specified.

- ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to anaesthetics, local (**ropivacaine**). [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [\[Mild\]](#) Study
- ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Ciprofloxacin** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to antipsychotics, second generation (**olanzapine**). Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose. [\[Severe\]](#) Theoretical
- ▶ Oral **iron** decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [\[Moderate\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Ciprofloxacin** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal
- ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical
- ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **rituzole**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **SNRIs (duloxetine)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **ciprofloxacin**. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 324. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study

- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
- ▶ Antimalarials (**chloroquine**) decrease the efficacy of **rabies vaccine** (intradermal). Avoid. [\[Moderate\]](#) Study
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [\[Moderate\]](#) Theoretical
- Raloxifene** → see TABLE 5 p. 961 (thromboembolism)
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of raloxifene. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Hormone replacement therapy** potentially opposes the effects of raloxifene. Avoid. [Severe] Theoretical
- Raltegravir**
- ▶ Oral **antacids** decrease the exposure to oral raltegravir. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to raltegravir. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to raltegravir. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to raltegravir (high-dose). Avoid. [Severe] Study
- ▶ **Encorafenib** is predicted to increase the exposure to raltegravir. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to raltegravir (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with raltegravir. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir decrease the exposure to raltegravir and raltegravir decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to raltegravir (high-dose). Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to raltegravir. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to raltegravir. Separate administration by at least 2 hours. [Moderate] Theoretical
- Raltitrexed** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Folates** are predicted to alter the effects of raltitrexed. Avoid. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with raltitrexed. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Ramipril** → see ACE inhibitors
- Ramucirumab** → see monoclonal antibodies
- Ranibizumab**
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (argatroban)**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (bivalirudin)**. [Moderate] Theoretical
- Ranitidine** → see H₂ receptor antagonists
- Ranolazine** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmic (dronedaron)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Ranolazine** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the concentration of ranolazine and ranolazine is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the concentration of ranolazine. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of ranolazine. Avoid. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study

Ranolazine (continued)

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 147. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** might increase the exposure to ranolazine. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Ranolazine** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962

Rasagiline → see MAO-B inhibitors

Reboxetine

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- Regorafenib** → see TABLE 15 p. 963 (myelosuppression), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to regorafenib. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
 - ▶ **Letermovir** is predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to regorafenib. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to regorafenib. [Moderate] Study → Also see TABLE 15 p. 963
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to regorafenib. [Severe] Study
 - ▶ **NSAIDs (mefenamic acid)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 960
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to regorafenib. Avoid. [Severe] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin)**. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 146. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 963
 - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 963

Relugolix

- ▶ **Aminoglycosides (gentamicin)** are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to relugolix. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to relugolix. Avoid or take relugolix first and

separate administration by at least 6 hours. [Moderate]

Theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (oxcarbazepine, topiramate)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Beta blockers, non-selective (carvedilol)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **NRTIs (efavirenz)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Tetracyclines (tetracycline)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study

Remdesivir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical

Remifentanyl → see opioids

Remimazolam → see benzodiazepines

Repaglinide → see meglitinides

Retigabine → see antiepileptics

Retinoids → see TABLE 15 p. 963 (myelosuppression), TABLE 5 p. 961 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.
- ▶ **Alcohol** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin** when given with **tretinoin**. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of **bexarotene**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Ribavirin

▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **NRTIs (zidovudine)**. Avoid. [Severe] Study

Ribociclib → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962

Ribociclib (continued)

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to antiarrhythmics (**amiodarone**). Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to antipsychotics, second generation (**quetiapine**). Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to benzodiazepines (**midazolam**). Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 963
- ▶ **Letermovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **netupitant**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **NNRTIs** (**efavirenz**, **nevirapine**) are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**). Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Rifamycins** (**rifampicin**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **statins** (**pravastatin**, **rosuvastatin**). [Moderate] Theoretical

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical

Rifabutin → see rifamycins

Rifampicin → see rifamycins

Rifamycins

rifabutin · rifampicin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Rifampicin** is predicted to decrease the exposure to 5-HT₃-receptor antagonists (**ondansetron**). [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to aldosterone antagonists (**eplerenone**). Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to anaesthetics, local (**ropivacaine**). [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to anti-androgens (**abiraterone**). Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of anti-androgens (**cyproterone**) with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to anti-androgens (**darolutamide**). Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of antiarrhythmics (**propafenone**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to anticholinesterases, centrally acting (**donepezil**). [Mild] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics (**phenobarbital**, **primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to antiepileptics (**brivaracetam**). Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of antiepileptics (**lamotrigine**). Adjust lamotrigine dose, p. 225. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**) increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study

- ▶ Antifungals, azoles (**ketoconazole**) are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
- ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 434. [Severe] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antimalarials (quinine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antipsychotics, second generation (clozapine)**. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (chlordiazepoxide)**. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **benzodiazepines (diazepam)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** increases the clearance of **benzodiazepines (lorazepam, nitrazepam)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **berotralstat**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Rifabutin** has been reported to cause a small decrease in the exposure to **cabotegravir**. Avoid intramuscular **cabotegravir**. [Moderate] Study
- ▶ **Rifampicin** modestly decreases the exposure to **cabotegravir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** greatly decreases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 429. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **chlormphenicol**. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study

Rifamycins (continued)

- ▶ **Rifampicin** moderately increases the exposure to the active metabolite of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to rifabutin. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**fluticasone**). [Unknown] Theoretical
- ▶ **Rifabutin** might decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins** decrease the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to dipeptidylpeptidase-4 inhibitors (**linagliptin**). [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 471. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mid] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of rifampicin. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Rifampicin** transiently increases the exposure to endothelin receptor antagonists (**ambriesentan**). [Moderate] Study
- ▶ **Rifampicin** affects the exposure to endothelin receptor antagonists (**bosentan**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to endothelin receptor antagonists (**macitentan**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors (**apixaban**). Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors (**edoxaban**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors (**rivaroxaban**). Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **fenfluramine**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 260. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir increase the exposure to rifabutin. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to rifabutin. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir**). Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to HIV-protease inhibitors (**ritonavir**). [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to HIV-protease inhibitors (**tipranavir**). Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to iron chelators (**deferasirox**). Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letemovir**. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **macrolides (erythromycin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Rifabutin** has been reported to cause neutropenia when given with **macrolides (azithromycin)**. [Severe] Study
- ▶ **Rifabutin** decreases the concentration of **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the concentration of **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** greatly decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** moderately decreases the exposure to **NNRTIs (doravirine)**. Adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **NNRTIs (etravirine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **NNRTIs (nevirapine)**. Avoid. [Severe] Study
- ▶ **Rifabutin** modestly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study

Rifamycins (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Rifampicin** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** might decrease the exposure to **roxadustat**. Monitor haemoglobin and adjust **roxadustat** dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **sodium glucose co-transporter 2 inhibitors (canagliflozin)**. Adjust **canagliflozin** dose. [Moderate] Study
- ▶ **Rifampicin** might decrease the exposure to **sodium glucose co-transporter 2 inhibitors (empagliflozin)**. Avoid or monitor diabetic control. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonyleureas**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** modestly decreases the exposure to **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Rifampicin** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **treprostinil**. Adjust dose. [Mild] Study
- ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxiclaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxiclaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Rifaximin

- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study
- ▶ Rifaximin has been reported to decrease the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal

Rilpivirine → see NNRTIs

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to riluzole. [Moderate] Theoretical

Riociguat → see TABLE 8 p. 961 (hypotension)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking is started or stopped during treatment.

- ▶ Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Theoretical
- ▶ Antifungals, azoles (**ketoconazole**) moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. [Severe] Theoretical

Risankizumab → see monoclonal antibodies

Risdiplam

- ▶ **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. [Moderate] Theoretical

Risedronate → see bisphosphonates

Risperidone → see antipsychotics, second generation

Ritonavir → see HIV-protease inhibitors

Rituximab → see monoclonal antibodies

Rivaroxaban → see factor Xa inhibitors

Rivastigmine → see anticholinesterases, centrally acting

Rizatriptan → see triptans

Rocuronium → see neuromuscular blocking drugs, non-depolarising

Roflumilast → see phosphodiesterase type-4 inhibitors

Regoginterferon alfa → see interferons

Ropinirole → see dopamine receptor agonists

Ropivacaine → see anaesthetics, local

Rosuvastatin → see statins

Rotavirus vaccine → see live vaccines

Rotigotine → see dopamine receptor agonists

Roxadustat

- ▶ **Aluminium hydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after aluminium hydroxide. [Moderate] Theoretical
- ▶ **Antacids** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after antacids. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Calcium salts (calcium acetate)** minimally decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after calcium acetate. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **roxadustat**. Monitor haemoglobin and adjust dose. [Moderate] Study
- ▶ **Iron** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after iron. [Moderate] Theoretical
- ▶ **Magnesium** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after magnesium. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to **meglitinides (repaglinide)**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **roxadustat**. Monitor haemoglobin and adjust **roxadustat** dose. [Moderate] Study
- ▶ **Sevelamer** modestly decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after sevelamer. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Roxadustat** might increase the exposure to **statins (fluvastatin)**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Sucroferic oxyhydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after sucroferic oxyhydroxide. [Moderate] Theoretical
- ▶ **Roxadustat** might increase the exposure to **sulfasalazine**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. [Moderate] Theoretical

Rucaparib → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Rucaparib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Rucaparib** slightly increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **berotralstat**. [Severe] Study

Rucaparib (continued)

- ▶ Rucaparib is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
 - ▶ Rucaparib slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **riluzole**. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **SNRIs (duloxetine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
 - ▶ Rucaparib is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [\[Unknown\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ Rucaparib is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib increases the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
 - ▶ Rucaparib is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
 - ▶ Rucaparib is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 324. [\[Moderate\]](#) Theoretical
 - ▶ Rucaparib might increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 963
- Rufinamide** → see antiepileptics
- Rupatadine** → see antihistamines, non-sedating
- Ruxolitinib** → see TABLE 15 p. 963 (myelosuppression)
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study

- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to **ruxolitinib**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Antifungals, azoles (**isavuconazole, posaconazole**) are predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
 - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
 - ▶ **Letermovir** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [\[Moderate\]](#) Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **ruxolitinib**. [\[Mid\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
 - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- Sacituzumab govitecan**
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
 - ▶ Antifungals, azoles (**ketoconazole**) are predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
 - ▶ **Encorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
 - ▶ **Erlotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
 - ▶ **Gefitinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
 - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir**) boosted with ritonavir are predicted to reduce the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Sorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- Sacubitril** → see TABLE 8 p. 961 (hypotension)
- Safinamide** → see MAO-B inhibitors
- Salbutamol** → see beta₂ agonists
- Salmeterol** → see beta₂ agonists
- Sapropterin** → see TABLE 8 p. 961 (hypotension)
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 961
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- Sarilumab** → see monoclonal antibodies
- Saxagliptin** → see dipeptidylpeptidase-4 inhibitors
- Secukinumab** → see monoclonal antibodies
- Selegiline** → see MAO-B inhibitors
- Selenium**

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

 - ▶ Oral **selenium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
 - ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
- Selexipag**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
 - ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
 - ▶ **Fibrates (gemfibrozil)** increase the exposure to **selexipag**. Avoid. [Severe] Study
 - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
 - ▶ **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- Selpercatinib** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **erovelimus**. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take 2 hours before or 10 hours after **H₂ receptor antagonists**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **loop diuretics (torasemide)**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 639. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Selpercatinib** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Selpercatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine)**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 639. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **sorafenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **St John's wort** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. Avoid. [Moderate] Study

Selpercatinib (continued)

- ▶ **Selpercatinib** is predicted to increase the exposure to **temsirolimus**. [Moderate] Study
- Selumetinib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **aspirin**. [Severe] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **cangrelor**. [Severe] Theoretical
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **cilostazol**. [Severe] Theoretical
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **clopidogrel**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **coumarins**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **dipyridamole**. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **selumetinib**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **prasugrel**. [Severe] Theoretical
 - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study

- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. [Severe] Theoretical
 - ▶ **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. [Severe] Theoretical
- Semaglutide** → see glucagon-like peptide-1 receptor agonists
- Sertraline** → see SSRIs
- Sevelamer**

SEPARATION OF ADMINISTRATION Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

- ▶ **Sevelamer** modestly decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sevelamer**, p. 683. [Moderate] Study

Sevoflurane → see volatile halogenated anaesthetics

Sildenafil → see phosphodiesterase type-5 inhibitors

Siltuximab → see monoclonal antibodies

Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simvastatin → see statins

Siponimod → see TABLE 6 p. 961 (bradycardia), TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 961
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 961
- ▶ **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 961
- ▶ **Dabrafenib** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

- ▶ **Imatinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Mifepristone** is predicted to increase the exposure to **siponimod**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- Sirolimus**
- ▶ **Abrocitinib** might increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bertralstat** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **sirolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sirolimus**. [Severe] Theoretical
- ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 590. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Olaparib** might increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study

Sirolimus (continued)

- ▶ **Palbociclib** is predicted to increase the exposure to sirolimus. Adjust dose. [Moderate] Theoretical
- ▶ **Pemigatinib** might increase the exposure to sirolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to sirolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to sirolimus. [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of sirolimus. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to sirolimus. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to sirolimus. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to sirolimus. Avoid or adjust dose. [Severe] Study

Sitagliptin → see dipeptidylpeptidase-4 inhibitors

- ▶ **SNRIs** → see TABLE 18 p. 964 (hyponatraemia), TABLE 13 p. 963 (serotonin syndrome), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 4 p. 960 (antiplatelet effects)

duloxetine - venlafaxine

- ▶ Antiepileptics (**phenytoin**) are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Axitinib** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **Duloxetine** is predicted to increase the exposure to **beta blockers**, selective (**metoprolol**). [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Givosiran** is predicted to increase the exposure to **duloxetine**. Use with caution and adjust dose. [Moderate] Study
- ▶ H₂ receptor antagonists (**cimetidine**) slightly increase the exposure to **venlafaxine**. [Mild] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 962 → Also see TABLE 11 p. 962
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Mexiletine** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical

- ▶ **Osilodrostat** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **duloxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **duloxetine**. Use with caution or avoid. [Moderate] Theoretical

Sodium bicarbonate

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals**, azoles (**ketoconazole**). [Moderate] Study
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
 - ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **NRRTIs (rilpivirine)**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
 - ▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
 - ▶ Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- Sodium citrate**
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
 - ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Sodium glucose co-transporter 2 inhibitors** → see TABLE 14 p. 963 (antidiabetic drugs), TABLE 8 p. 961 (hypotension)

canagliflozin · dapagliflozin · empagliflozin · ertugliflozin

- ▶ **Antiepileptics (phenytoin)** might decrease the exposure to **empagliflozin**. Avoid or monitor diabetic control. [Moderate] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sodium glucose co-transporter 2 inhibitors**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **canagliflozin**. Adjust **canagliflozin** dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **empagliflozin**. Avoid or monitor diabetic control. [Moderate] Theoretical
- Sodium oxybate** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose. [Moderate] Study
- Sodium phenylbutyrate**
- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- Sodium picosulfate** → see TABLE 18 p. 964 (hyponatraemia)
- ▶ Oral **sodium picosulfate** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical
- Sodium zirconium cyclosilicate**
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nirotris (rilpivirine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- Sofosbuvir**
- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmic (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461, sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 461, sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

- ▶ **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- Solifenacin** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **solifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 556 or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- Solriamfetol**
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- Somatropin**
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical
- Sorafenib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Dabrafenib** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- ▶ **NRRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Sorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Selpercatinib** is predicted to increase the exposure to **sorafenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

Sorafenib (continued)

- ▶ **St John's wort** is predicted to decrease the exposure to sorafenib. [Moderate] Study
- Sotalol** → see beta blockers, non-selective
- Sotorasib** → see TABLE 1 p. 960 (hepatotoxicity)
- ▶ **Sotorasib** is predicted to increase the exposure to **aliskiren**. Avoid or adjust dose. [Moderate] Study
- ▶ Oral **antacids** are predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ **Sotorasib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** moderately decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
- ▶ Oral **calcium salts (calcium carbonate)** are predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- ▶ **Sotorasib** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **digoxin**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to decrease the exposure to **ergotamine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Sotorasib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Avoid or adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **sotorasib**. Avoid. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Sotorasib** is predicted to decrease the exposure to **opioids (alfentanil)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **sirinilimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- ▶ **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to decrease the exposure to **tensirolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Sotorasib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. [Moderate] Study

Spirolactone → see aldosterone antagonists

SSRIs → see TABLE 18 p. 964 (hyponatraemia), TABLE 13 p. 963 (serotonin syndrome), TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- ▶ SSRIs (fluoxetine, fluvoxamine) are predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 841. [Severe] Study
- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [Severe] Study
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 963

- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **citalopram**. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline). [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [Moderate] Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ SSRIs (fluoxetine, fluvoxamine) are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of SSRIs. [Moderate] Anecdotal
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 277. [Moderate] Study
- ▶ **Fluvoxamine** increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Paroxetine** moderately increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Fluvoxamine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Severe] Anecdotal
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (fluoxetine, fluvoxamine) potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (diazepam)**. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study

- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 960
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to SSRIs (**citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **fedratinib**. Avoid depending on other drugs taken—consult product literature. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Gilteritinib** is predicted to decrease the efficacy of SSRIs (**escitalopram, fluoxetine, sertraline**). Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram, escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine, sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical → Also see TABLE 4 p. 960
- ▶ **Letermovir** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine, paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 13 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 963
- ▶ SSRIs might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose. [Moderate] Study
- ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. [Severe] Theoretical

SSRIs (continued)

- ▶ **Fluvoxamine** markedly increases the exposure to **SNRIs (duloxetine)**. Avoid. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ SSRIs (**fluvoxamine**) are predicted to increase the exposure to SSRIs (**citalopram**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to SSRIs (**escitalopram**). Use with caution and adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
- ▶ **Fluvoxamine** very slightly increases the exposure to **talazoparib**. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (**citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline**). [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine**) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 732. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
- ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
- ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
- ▶ **Fluvoxamine** increases the concentration of **triptans (frovatriptan)**. [Severe] Study → Also see TABLE 13 p. 963
- ▶ **Fluvoxamine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 324. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
- ▶ **St John's wort** → see TABLE 13 p. 963 (serotonin syndrome)
- ▶ **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
- ▶ **St John's wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (alprazolam)**. [Moderate] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **berotralstat**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the efficacy of **combined hormonal contraceptives**. MHRH advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **St John's wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal

- ▶ **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 471. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **figogliomod**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to the active metabolite of **fofemsavir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **St John's wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **St John's wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **NNRTIs (doravirine, rilpivirine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **NNRTIs (efavirenz, nevirapine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 963
- ▶ **St John's wort** moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical

St John's wort (continued)

- ▶ St John's wort is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ St John's wort slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ St John's wort is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **regorafenib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **selpircatinib**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
- ▶ St John's wort decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Tepotinib** might decrease the exposure to **St John's wort**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ St John's wort potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ St John's wort is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ St John's wort might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **tofacinib**. [Moderate] Study

- ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. [Mild] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
 - ▶ **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 960 (hepatotoxicity)

atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin

- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **atorvastatin**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** slightly decrease the exposure to **rosuvastatin**. [Mild] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [Moderate] Study
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **statins (pravastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (eslicarbazepine)** decrease the exposure to **rosuvastatin**. [Moderate] Study

- ▶ Antiepileptics (**phenytoin**) moderately decrease the exposure to **atorvastatin**. [Moderate] Study
- ▶ Antiepileptics (**phenytoin**) are predicted to decrease the exposure to **simvastatin**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, primidone**) are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, miconazole**) are predicted to increase the exposure to **fluvastatin**. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**isavuconazole**) slightly increase the exposure to **atorvastatin**. [Moderate] Study
- ▶ Antifungals, azoles (**isavuconazole**) are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**miconazole**) (including the oral gel) might increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**miconazole**) (including the oral gel) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **atorvastatin**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**posaconazole**) markedly to very markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 960
- ▶ Antifungals, azoles (**isavuconazole**) are predicted to increase the exposure to statins (**fluvastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Bempedoic acid** increases the exposure to **pravastatin**. [Moderate] Study
- ▶ **Bempedoic acid** increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Moderate] Study
- ▶ Calcium channel blockers (**amlodipine**) slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem**) slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**verapamil**) are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **simvastatin**. Adjust dose. [Moderate] Theoretical
- ▶ Cephalosporins (**ceftibiprole**) are predicted to increase the concentration of statins. [Moderate] Theoretical
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 145. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Cilostazol** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Cilostazol** slightly increases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Clodipogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** has been reported to cause rhabdomyolysis when given with statins. [Severe] Anecdotal
- ▶ Statins (**fluvastatin, rosuvastatin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pravastatin**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ Statins are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir slightly increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 145. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 146. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Moderate] Theoretical
- ▶ **Elxacaftor** is predicted to increase the exposure to statins (**atorvastatin, pravastatin, rosuvastatin, simvastatin**). [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to statins. Monitor and adjust dose. [Moderate] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Severe] Study
- ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 147. [Severe] Study
- ▶ Fibrates (**ciprofibrate**) increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ Fibrates (**ciprofibrate**) increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ Fibrates (**fenofibrate**) increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust **fenofibrate** dose, p. 144. [Severe] Anecdotal
- ▶ Fibrates (**fenofibrate**) are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Use with caution and adjust **fenofibrate** dose, p. 144. [Severe] Theoretical
- ▶ Fibrates (**fenofibrate**) are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ Fibrates (**fenofibrate**) increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 144, p. 146. [Severe] Anecdotal
- ▶ Fibrates (**fenofibrate**) increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **fenofibrate** dose, p. 144. [Severe] Anecdotal
- ▶ Fibrates (**gemfibrozil**) increase the risk of rhabdomyolysis when given with statins. Avoid. [Severe] Anecdotal
- ▶ Fibrates (**bezafibrate**) increase the risk of rhabdomyolysis when given with statins (**atorvastatin, fluvastatin**). [Severe] Study

Statins (continued)

- ▶ **Fostamatinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Fostamatinib** slightly increases the exposure to **simvastatin**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fostemsavir** increases the exposure to **rosuvastatin**. Adjust starting dose and monitor. [Severe] Study
- ▶ **Fostemsavir** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **simvastatin**). Adjust starting dose and monitor. [Severe] Theoretical
- ▶ **Fusidate** has been reported to cause rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** with pibrentasvir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 146. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** moderately increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 145. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 146. [Moderate] Theoretical
- ▶ **Grazoprevir** with elbasvir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** might affect the exposure to **pravastatin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust **rosuvastatin** dose, p. 146. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir, ritonavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** are predicted to increase the exposure to **rosuvastatin**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Anecdotal
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins (**fluvastatin**, **pravastatin**, **simvastatin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Leflunomide** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 145. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin**, **simvastatin**). Avoid. [Severe] Study
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours. [Mild] Study → Also see TABLE 1 p. 960
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 147. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Mifepristone** moderately increases the exposure to **fluvastatin**. [Moderate] Study
- ▶ **Mifepristone** very markedly increases the exposure to **simvastatin**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nicotinic acid** might increase the risk of rhabdomyolysis when given with **statins**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of statins (**atorvastatin**, **rosuvastatin**). Adjust dose. [Severe] Theoretical
- ▶ **NNRTIs (etravirine)** slightly decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **NNRTIs (etravirine)** are predicted to increase the exposure to **fluvastatin**. Adjust dose. [Severe] Theoretical
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **simvastatin**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). [Moderate] Study
- ▶ **Olaparib** is predicted to increase the exposure to **statins**. [Moderate] Theoretical
- ▶ **Osimertinib** causes a small increase in the exposure to **rosuvastatin**. [Severe] Study
- ▶ **Pazopanib** might cause increased ALT concentrations when given with **simvastatin**. [Moderate] Study
- ▶ **Pazopanib** might affect the exposure to statins (**atorvastatin**, **pravastatin**, **rosuvastatin**). [Moderate] Theoretical
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Pibrentasvir** with glecaprevir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study

- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 146. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin**). [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to statins (**pravastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **atorvastatin**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** very markedly decrease the exposure to **simvastatin**. [Moderate] Study
- ▶ **Roxadustat** might increase the exposure to **fluvastatin**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to statins (**atorvastatin, pravastatin, rosuvastatin, simvastatin**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [Mild] Study
- ▶ **Atorvastatin** very slightly increases the exposure to **talazoparib**. [Moderate] Study
- ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to statins (**atorvastatin, pravastatin, rosuvastatin, simvastatin**). Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). Avoid. [Moderate] Study
- ▶ **Tepotinib** might increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Teriflunomide** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Ticagrelor** slightly to moderately increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 147. [Moderate] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **simvastatin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Velpatasvir** with sofosbuvir slightly increases the exposure to **atorvastatin**. [Severe] Study
- ▶ **Velpatasvir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor adverse effects, p. 146. [Severe] Study
- ▶ **Velpatasvir** with sofosbuvir is predicted to increase the exposure to statins (**fluvastatin, simvastatin**). Monitor adverse effects and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **atorvastatin**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to statins (**fluvastatin, pravastatin, rosuvastatin, simvastatin**). [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 145. [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 146. [Moderate] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (**fluvastatin, simvastatin**). Avoid. [Moderate] Theoretical
- Stiripentol** → see antiepileptics
- Streptokinase** → see TABLE 3 p. 960 (anticoagulant effects)
- Streptomycin** → see aminoglycosides
- Streptozocin** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Strontium** → see TABLE 5 p. 961 (thromboembolism)
- ▶ Oral **antacids** decrease the absorption of oral **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
- ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
- Sucralfate**
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** potentially decreases the effects of **coumarins (warfarin)**. Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sucralfate** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
- Sucroferriic oxyhydroxide**
- ▶ **Sucroferriic oxyhydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sucroferriic oxyhydroxide**. [Moderate] Theoretical
- Sugammadex**
- ▶ **Sugammadex** is predicted to decrease the exposure to **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical

Sugammadex (continued)

- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [\[Moderate\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Roxadustat** might increase the exposure to **sulfasalazine**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Tepotinib** might increase the exposure to **sulfasalazine**. [\[Severe\]](#) Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 960
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical

Sulfonamides

sulfadiazine · sulfadoxine · sulfamethoxazole

- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Anecdotal
- ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sulfadiazine** increases the concentration of **antiepileptics (phenytoin)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **sulfonamides**. [\[Severe\]](#) Study
- ▶ **Chloroprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [\[Moderate\]](#) Study
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [\[Moderate\]](#) Theoretical

Sulfonylureas → see TABLE 14 p. 963 (antidiabetic drugs)

glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **glibenclamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Cephalosporins (ceftriaxone)** are predicted to increase the concentration of **glibenclamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [\[Severe\]](#) Study
 - ▶ **Elxacaftor** is predicted to increase the exposure to **glibenclamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** increase the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [\[Severe\]](#) Study
 - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sulfonylureas**. [\[Moderate\]](#) Theoretical
 - ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [\[Moderate\]](#) Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [\[Moderate\]](#) Study
 - ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [\[Moderate\]](#) Theoretical
 - ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Mifepristone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [\[Moderate\]](#) Theoretical
 - ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sulfonylureas**. [\[Moderate\]](#) Study
 - ▶ **Roxadustat** is predicted to increase the exposure to **glibenclamide**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [\[Mild\]](#) Study
 - ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [\[Moderate\]](#) Study
 - ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **glibenclamide**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **glibenclamide**. [\[Moderate\]](#) Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **glibenclamide**. [\[Moderate\]](#) Theoretical
- Sulindac** → see NSAIDs
- Sulpiride** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Oral antacids** decrease the absorption of oral **sulpiride**. Separate administration by 2 hours. [\[Moderate\]](#) Study
 - ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
 - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 961
 - ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 962
 - ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- Sumatriptan** → see triptans
- Sunitinib** → see TABLE 15 p. 963 (myelosuppression), TABLE 9 p. 962 (QT-interval prolongation), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 4 p. 960
 - ▶ **Letermovir** is predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 15 p. 963
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
 - ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **thyroid hormones (levothyroxine)**. [Moderate] Anecdotal
- Suxamethonium** → see TABLE 6 p. 961 (bradycardia), TABLE 20 p. 964 (neuromuscular blocking effects)
- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical → Also see TABLE 6 p. 961
 - ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
 - ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal

- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal → Also see TABLE 6 p. 961
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- ▶ **Intravenous magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
- ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical

Sympathomimetics, inotropic

- dobutamine · dopamine
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **aproclonidine**. Avoid. [Severe] Theoretical
 - ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
 - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
 - ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
 - ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
 - ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of adverse effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **aproclonidine**. Avoid. [Severe] Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Isometheptene** potentially increases the risk of adverse effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Severe] Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics,**

Sympathomimetics, vasoconstrictor (continued)

vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [\[Moderate\]](#) Study

- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with noradrenaline/norepinephrine. [\[Severe\]](#) Anecdotal
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Study
- ▶ Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine) are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Sympathomimetics, vasoconstrictor are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Sympathomimetics, vasoconstrictor are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
- ▶ **Mianserin** decreases the effects of **ephedrine**. [\[Severe\]](#) Anecdotal
- ▶ Sympathomimetics, vasoconstrictor (**ephedrine, isometheptene, phenylephrine, pseudoephedrine**) are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [\[Severe\]](#) Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [\[Severe\]](#) Theoretical
- ▶ Sympathomimetics, vasoconstrictor might increase the risk of a hypertensive crisis when given with **ozanimod**. [\[Severe\]](#) Theoretical
- ▶ **Ephedrine** increases the risk of adverse effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine). Avoid. [\[Severe\]](#) Study

Talciditol → see vitamin D substances

Tacrolimus → see TABLE 2 p. 960 (nephrotoxicity), TABLE 16 p. 964 (increased serum potassium)

- ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Tacrolimus** is predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Theoretical
- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Theoretical

- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **tacrolimus**. [\[Severe\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 2 p. 960 → Also see TABLE 16 p. 964
- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mild\]](#) Study
- ▶ **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Iron chelators (dexrazoxane)** might increase the risk of immunosuppression when given with **tacrolimus**. [\[Severe\]](#) Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **tacrolimus**. [Severe] Theoretical
- ▶ **NNRTIs (dorarivine)** are predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 591. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **tacrolimus**. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pibrentasvir** with **glecaprevir** slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **SNRIs (venlafaxine)**. [Severe] Anecdotal
- ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
- ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Tacrolimus** increases the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. [Moderate] Theoretical
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Tafasitamab** → see monoclonal antibodies
- Talazoparib** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Berotralstat** is predicted to increase the concentration of **talazoparib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Beta blockers, non-selective (carvedilol)** cause a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, felodipine)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (darunavir, tipranavir)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. [Moderate] Study
- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Olaparib** might increase the exposure to **talazoparib**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Osimertinib** is predicted to increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Statins (atorvastatin)** very slightly increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Tepotinib** is predicted to increase the concentration of **talazoparib**. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **talazoparib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- Tamoxifen** → see TABLE 5 p. 961 (thromboembolism)
- ▶ **Tamoxifen (high-dose)** might increase the concentration of **antiepileptics (fosphenytoin)** and **antiepileptics (fosphenytoin)** might decrease the concentration of **tamoxifen (high-dose)**. [Severe] Theoretical
- ▶ **Tamoxifen (high-dose)** might increase the concentration of **antiepileptics (phenytoin)** and **antiepileptics (phenytoin)** might decrease the concentration of **tamoxifen (high-dose)**. [Severe] Anecdotal
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **tamoxifen**. [Unknown] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- Tamsulosin** → see alpha blockers
- Tapentadol** → see opioids
- Taxanes** → see TABLE 15 p. 963 (myelosuppression), TABLE 12 p. 963 (peripheral neuropathy)

cabazitaxel + docetaxel + paclitaxel

- ▶ **Cabazitaxel** is predicted to affect the exposure to **angiotensin-II receptor antagonists (valsartan)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical

Taxanes (continued)

- ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **cabazitaxel**. Avoid. [\[Moderate\]](#) Study
- ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
- ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ Antiarrhythmics (**amiodarone**) are predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Theoretical → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cabazitaxel**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical → Also see TABLE 12 p. 963
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study → Also see TABLE 12 p. 963
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cabazitaxel** is predicted to affect the exposure to antihistamines, non-sedating (**fxofenadine**). Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of taxanes (**docetaxel**, **paclitaxel**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Ciclosporin** increases the concentration of taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Study
- ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
- ▶ Fibrates (**gemfibrozil**) are predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Ibrutinib** is predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**). Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Imatinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal → Also see TABLE 15 p. 963
- ▶ Iron chelators (**deferasirox**) are predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **Ivacaftor** is predicted to increase the exposure to **docetaxel** (oral). [\[Unknown\]](#) Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **paclitaxel** (oral). [\[Unknown\]](#) Study
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 963
- ▶ **Letermovir** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel**, **paclitaxel**). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **paclitaxel**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Theoretical

- ▶ **Cabazitaxel** is predicted to affect the exposure to **meglitinides (repaglinide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mid] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Moderate] Study → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Mitotane** is predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Neratinib** is predicted to increase the exposure to **docetaxel** (oral). [Unknown] Theoretical
 - ▶ **Neratinib** is predicted to increase the exposure to **paclitaxel** (oral). [Unknown] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **docetaxel**. [Severe] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **paclitaxel**. [Moderate] Anecdotal
 - ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Nilotinib** is predicted to increase the exposure to **docetaxel**. [Severe] Study → Also see TABLE 15 p. 963
 - ▶ **Nilotinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Anecdotal → Also see TABLE 15 p. 963
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cabazitaxel**. [Moderate] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
 - ▶ **Olaparib** might increase the exposure to taxanes (**docetaxel, paclitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Osimertinib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). [Moderate] Study
 - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mid] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**) (oral). [Unknown] Theoretical
 - ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Moderate] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**) (oral). [Unknown] Theoretical → Also see TABLE 15 p. 963
 - ▶ **Selpercatinib** is predicted to increase the exposure to **paclitaxel**. Avoid. [Moderate] Study
 - ▶ **Sotorasib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). Avoid or adjust dose. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
 - ▶ **Cabazitaxel** is predicted to affect the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Cabazitaxel** is predicted to affect the exposure to **sulfonylureas (glibenclamide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Tepotinib** is predicted to increase the concentration of taxanes (**docetaxel, paclitaxel**) (oral). [Severe] Study
 - ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
 - ▶ **Tucatinib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **docetaxel** (oral). [Unknown] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **paclitaxel** (oral). [Unknown] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **docetaxel** (oral). [Unknown] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **paclitaxel** (oral). Use with caution and adjust dose. [Unknown] Theoretical
- Tazarotene** → see retinoids
- Tedizolid**
- ▶ **Tedizolid** is predicted to increase the exposure to **imatnib**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Moderate] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- Tegafur** → see TABLE 15 p. 963 (myelosuppression)
- ▶ **Tegafur** potentially increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
 - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical → Also see TABLE 15 p. 963
- Teicoplanin**
- GENERAL INFORMATION** If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.
- ▶ **Telmisartan** → see angiotensin-II receptor antagonists
 - Telotristat ethyl**
 - ▶ **Telotristat ethyl** decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
 - ▶ **Telotristat ethyl** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study
 - Temazepam** → see benzodiazepines
 - Temocillin** → see penicillins
 - Temozolomide** → see alkylating agents
 - Temeisrolimus** → see TABLE 15 p. 963 (myelosuppression)
 - ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temeisrolimus**. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **temeisrolimus**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **temeisrolimus**. Use with caution or avoid. [Moderate] Theoretical

Temezirolimus (continued)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **temezirolimus**. Use with caution or avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of and the risk of angioedema when given with **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Temezirolimus** is predicted to increase the risk of angioedema when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to oral **temezirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **temezirolimus**. [Mid] Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **temezirolimus** (oral). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temezirolimus**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to oral **temezirolimus**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **temezirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might alter the exposure to **temezirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 963
- ▶ **Pitolisant** is predicted to decrease the exposure to **temezirolimus**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Study

- ▶ **Selpercatinib** is predicted to increase the exposure to **temezirolimus**. [Moderate] Study
- ▶ **Sotorasib** is predicted to decrease the exposure to **temezirolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **temezirolimus**. Avoid. [Severe] Theoretical
- Tenecteplase** → see TABLE 3 p. 960 (anticoagulant effects)
- Tenofovir alafenamide**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
 - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
 - ▶ **Fostemsavir** is predicted to increase the exposure to **tenofovir alafenamide**. Adjust dose—consult product literature. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
 - ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- Tenofovir disoproxil** → see TABLE 2 p. 960 (nephrotoxicity)
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 960
- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study
- Tenoxicam** → see NSAIDs
- Tepotinib**
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
 - ▶ **Tepotinib** is predicted to increase the concentration of antihistamines, non-sedating (fexofenadine). [Severe] Study
 - ▶ **Tepotinib** is predicted to increase the concentration of **colchicine**. [Severe] Study
 - ▶ **Tepotinib** is predicted to increase the concentration of **digoxin**. [Severe] Study
 - ▶ **Tepotinib** is predicted to increase the concentration of **everolimus**. [Severe] Study
 - ▶ **Tepotinib** is predicted to increase the concentration of **factor XA inhibitors (edoxaban, rivaroxaban)**. [Severe] Study
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical

- ▶ HIV-protease inhibitors (**ritonavir**) might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **loperamide**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **sirolimus**. [Severe] Study
- ▶ **Tepotinib** might decrease the exposure to **St John's wort**. Avoid. [Severe] Theoretical
- ▶ **Tepotinib** might increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Tepotinib** might increase the exposure to **sulfasalazine**. [Severe] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **talazoparib**. [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of **taxanes (docetaxel, paclitaxel)** (oral). [Severe] Study
- ▶ **Tepotinib** slightly increases the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of **topotecan**. [Severe] Study

Terazosin → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 277. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
 - ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **terbinafine**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
 - ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
 - ▶ **Terbinafine** moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Terbutaline** → see beta₂ agonists
- Teriflunomide** → see TABLE 1 p.960 (hepatotoxicity)
- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
 - ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **berotralstat**. [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
 - ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
 - ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
 - ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p.960
 - ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **NRTIs (zidovudine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study

Teriflunomide (continued)

- ▶ Teriflunomide is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
 - ▶ Teriflunomide is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
 - ▶ Teriflunomide is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ Teriflunomide is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **rifamycins (rifampicin)**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
 - ▶ Teriflunomide is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 960
 - ▶ Teriflunomide moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 146. [Moderate] Study → Also see TABLE 1 p. 960
 - ▶ Teriflunomide is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 960
 - ▶ Teriflunomide is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
 - ▶ Teriflunomide is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
 - ▶ Teriflunomide is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ Teriflunomide moderately decreases the exposure to **tizanidine**. [Mild] Study
 - ▶ Teriflunomide is predicted to increase the exposure to **topotecan**. [Moderate] Study
 - ▶ Teriflunomide is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
 - ▶ Teriflunomide is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Tetanus immunoglobulin** → see immunoglobulins
- Tetrabenazine** → see TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study

Tetracaine → see anaesthetics, local

Tetracycline → see tetracyclines

Tetracyclines → see TABLE 1 p. 960 (hepatotoxicity)

demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline

- ▶ Dairy products decrease the absorption of **demeclocycline** and **oxytetracycline**.
- ▶ Interactions do not generally apply to topical use of **oxytetracycline** unless specified.
- ▶ Dairy products decrease the exposure to **tetracycline**—manufacturer advises take 1 hour before or 2 hours after dairy products.

- ▶ Oral **ACE inhibitors (quinapril)** (magnesium carbonate-containing forms) might decrease the absorption of oral **tetracyclines**. Avoid. [Moderate] Study
- ▶ Oral **antacids** greatly decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 960
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Theoretical
- ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [Moderate] Study
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- ▶ **Doxycycline** is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with **minocycline**. [Moderate] Anecdotal
- ▶ **Tetracyclines** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ Oral **iron** decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [Moderate] Study
- ▶ Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Tetracycline** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Rifamycins (rifampicin)** modestly decrease the exposure to **doxycycline**. Adjust dose. [Moderate] Study
- ▶ **Sironium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
- ▶ Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical

Tezacaftor

FOOD AND LIFESTYLE Bitter (Seville) oranges might increase the exposure to tezacaftor.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with

ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Idealalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 206 and tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor and elexacaftor p. 206. [\[Severe\]](#) Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical

Thalidomide → see TABLE 6 p. 961 (bradycardia), TABLE 15 p. 963 (myelosuppression), TABLE 12 p. 963 (peripheral neuropathy), TABLE 5 p. 961 (thromboembolism), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical

Theophylline → see TABLE 17 p. 964 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore

required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [\[Mild\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **theophylline**. [\[Moderate\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [\[Moderate\]](#) Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [\[Moderate\]](#) Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Study
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Lefunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Metreleptin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

Theophylline (continued)

- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **St John's wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of adverse effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical

Thiazide diuretics → see TABLE 18 p. 964 (hyponatraemia), TABLE 8 p. 961 (hypotension), TABLE 17 p. 964 (reduced serum potassium)

benfroflumethiazide · chlorothiazide · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide

- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Metolazone** is predicted to decrease the efficacy of **methenamine**. [Moderate] Theoretical
- ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 964
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- ▶ **Thiopental** → see TABLE 8 p. 961 (hypotension), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962

Thiotepa → see alkylating agents

Thrombin inhibitors → see TABLE 3 p. 960 (anticoagulant effects)

argatroban · bivalirudin · dabigatran

- ▶ **Abrocitinib** slightly increases the exposure to **dabigatran**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **dabigatran**. [Mild] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Bertralstat** is predicted to increase the concentration of **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Cobicistat** moderately increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **dabigatran**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **dabigatran**. [Moderate] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Pemigatinib** might increase the exposure to **dabigatran**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mild] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Tepotinib** slightly increases the exposure to **dabigatran**. [Severe] Study
- ▶ **Ticagrelor** increases the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **dabigatran**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **dabigatran**. Avoid. [Severe] Study

Thyroid hormones

levothyroxine · liothyronine

FOOD AND LIFESTYLE Food, including dietary fibre, milk, soya products, and coffee, might decrease the absorption of levothyroxine.

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
 - ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **levothyroxine**. [Mid] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
 - ▶ Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
 - ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
 - ▶ Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
 - ▶ **Imatinib** causes hypothyroidism when given with **levothyroxine** in thyroidectomy patients. [Moderate] Study
 - ▶ Oral **iron** decreases the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir might decrease the efficacy of **levothyroxine**. [Moderate] Theoretical
 - ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **levothyroxine**. [Moderate] Anecdotal
- Tiagabine** → see antiepileptics
Tiaprofenic acid → see NSAIDs
Tibolone → see TABLE 5 p. 961 (thromboembolism)
- Ticagrelor** → see TABLE 6 p. 961 (bradycardia), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 961
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Cenobamate** is predicted to decrease the exposure to **ticagrelor**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study → Also see TABLE 6 p. 961
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ticagrelor** slightly to moderately increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 147. [Moderate] Study
 - ▶ **Ticagrelor** increases the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- Tigecycline** → see TABLE 1 p. 960 (hepatotoxicity)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** might increase the exposure to **tigecycline**. [Mid] Anecdotal
 - ▶ **Antiepileptics (carbamazepine)** might decrease the exposure to **tigecycline**. [Mid] Theoretical → Also see TABLE 1 p. 960
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** might increase the exposure to **tigecycline**. [Mid] Anecdotal → Also see TABLE 1 p. 960
 - ▶ **Calcium channel blockers (verapamil)** might increase the exposure to **tigecycline**. [Mid] Anecdotal
 - ▶ **Ciclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **ciclosporin**. [Severe] Anecdotal
 - ▶ **Tigecycline** is predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal

Tigecycline (continued)

- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ivacaftor** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Lapatinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Macrolides** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Neratinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 960
- ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **St John's wort** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Vandetanib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal

Tildrakizumab → see monoclonal antibodies

Timolol → see beta blockers, non-selective

Tinzaparin → see low molecular-weight heparins

Tioguanine → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

Tiotropium → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tiotropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962

Tipranavir → see HIV-protease inhibitors

Tirofiban → see TABLE 3 p. 960 (anticoagulant effects)

Tivozanib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **tinzaparin (rosvastatin)**. [Moderate] Theoretical

Tizanidine → see TABLE 6 p. 961 (bradycardia), TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Axitinib** is predicted to increase the exposure to **tizanidine**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Givosiran** is predicted to increase the exposure to **tizanidine**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study

- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- ▶ **Osilodrostat** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
- ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Rucaparib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies

Tofacitinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tofacitinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 732. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study

Tolbutamide → see sulfonylureas

Tolcapone

- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical

Tolfenamic acid → see NSAIDs

Tolterodine → see TABLE 9 p. 962 (QT-interval prolongation),

- TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tolterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 962

Tolvaptan → see TABLE 16 p. 964 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical

Topiramate → see anti-epileptics

Topotecan → see TABLE 15 p. 963 (myelosuppression)

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **topotecan**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical

Topotecan (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Berotrastat** is predicted to increase the concentration of **topotecan**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Ivacaftor** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Olaparib** might increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 963
- ▶ **Osimertinib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study → Also see TABLE 15 p. 963
- ▶ **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Tepotinib** is predicted to increase the concentration of **topotecan**. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

Torasemide → see loop diuretics

Toremifene → see TABLE 5 p. 961 (thromboembolism), TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 962
 - ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical
- Trabectedin** → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 960
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 960
 - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 963
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
- Tralokinumab** → see monoclonal antibodies
- Tramadol** → see opioids
- Trametinib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
 - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
 - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical

- ▶ **Ivacaftor** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- Trandolapril** → see ACE inhibitors
- Tranexamic acid** → see TABLE 5 p. 961 (thromboembolism)
- Tranycypromine** → see MAOIs, irreversible
- Trastuzumab** → see monoclonal antibodies
- Trastuzumab deruxtecan** → see monoclonal antibodies
- Trastuzumab emtansine** → see monoclonal antibodies
- Trazodone** → see TABLE 13 p. 963 (serotonin syndrome), TABLE 11 p. 962 (CNS depressant effects)
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine)** decrease the concentration of trazodone. Adjust dose. [Moderate] Anecdotal
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
 - ▶ **Idealisib** is predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to trazodone. [Moderate] Theoretical
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of trazodone. [Moderate] Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

- Treosulfan** → see alkylating agents
- Treprostinil** → see TABLE 8 p. 961 (hypotension), TABLE 4 p. 960 (antiplatelet effects)
 - ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin)** are predicted to decrease the exposure to treprostinil. Adjust dose. [Mid] Theoretical
 - ▶ **Clopidogrel** is predicted to increase the exposure to treprostinil. Adjust dose. [Moderate] Theoretical → Also see TABLE 4 p. 960

- ▶ **Fibrates (gemfibrozil)** increase the exposure to treprostinil. Adjust dose. [Moderate] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to treprostinil. Adjust dose. [Moderate] Theoretical
- ▶ **Loop diuretics (furosemide)** might slightly decrease the clearance of treprostinil. [Unknown] Theoretical → Also see TABLE 8 p. 961
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to treprostinil. Adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to decrease the exposure to treprostinil. Adjust dose. [Mid] Theoretical
- ▶ **Trimethoprim** is predicted to increase the exposure to treprostinil. Adjust dose. [Moderate] Theoretical
- Tretinoin** → see retinoids
- Triamcinolone** → see corticosteroids
- Triamterene** → see potassium-sparing diuretics
- Tricyclic antidepressants** → see TABLE 18 p. 964 (hyponatraemia), TABLE 8 p. 961 (hypotension), TABLE 13 p. 963 (serotonin syndrome), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects), TABLE 10 p. 962 (antimuscarinics)
 - amitriptyline - clomipramine - dosulepin - doxepin - imipramine - lofepramine - nortriptyline - trimipramine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to tricyclic antidepressants. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of tricyclic antidepressants. [Moderate] Theoretical → Also see TABLE 10 p. 962
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to tricyclic antidepressants. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 964
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to tricyclic antidepressants. [Moderate] Study → Also see TABLE 11 p. 962
- ▶ **Antiepileptics (valproate)** increase the concentration of nortriptyline. [Severe] Study
- ▶ Tricyclic antidepressants (**clomipramine, imipramine**) potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tricyclic antidepressants**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962 → Also see TABLE 10 p. 962
- ▶ **Bupropion** is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
- ▶ **Cobicistat** is predicted to slightly increase the exposure to tricyclic antidepressants. [Mid] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to tricyclic antidepressants (**imipramine, nortriptyline**). Avoid. [Severe] Study
- ▶ **Darifenacin** (high-dose) is predicted to increase the exposure to tricyclic antidepressants. [Moderate] Study → Also see TABLE 10 p. 962
- ▶ **Eliglustat** is predicted to increase the exposure to nortriptyline. Adjust dose. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to tricyclic antidepressants. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to tricyclic antidepressants. [Moderate] Theoretical

Tricyclic antidepressants (continued)

- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 963 → Also see TABLE 9 p. 962
 - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 13 p. 963
 - ▶ **Methyphenidate** might increase the concentration of **tricyclic antidepressants**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Amitriptyline** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 963
 - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants (**amitriptyline, imipramine, nortriptyline**). [Moderate] Theoretical
 - ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
 - ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
 - ▶ **SSRIs (fluvoxamine)** increase the exposure to tricyclic antidepressants (**amitriptyline, imipramine**). Adjust dose. [Severe] Study → Also see TABLE 18 p. 964 → Also see TABLE 13 p. 963
 - ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
 - ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine**). Avoid. [Severe] Study
 - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of sympathomimetics, vasoconstrictor (**ephedrine**). Avoid. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
 - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
- ### Trientine
- ▶ Oral **trientine** potentially decreases the absorption of oral **iron**. [Moderate] Theoretical
 - ▶ **Trientine** potentially decreases the absorption of **zinc**. [Moderate] Theoretical
- ### Trifluoperazine
- see phenothiazines
- ### Trihexyphenidyl
- see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **trihexyphenidyl**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- ### Trimethoprim
- see TABLE 18 p. 964 (hyponatraemia), TABLE 2 p. 960 (nephrotoxicity), TABLE 16 p. 964 (increased serum potassium)
- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study
 - ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **trimethoprim**. [Severe] Study
 - ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **azathioprine** in renal transplant patients. [Severe] Anecdotal
 - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study

- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study
 - ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
 - ▶ **Trimethoprim** slightly increases the exposure to **meglitinides (repaglinide)**. Avoid or monitor blood glucose. [Moderate] Study
 - ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. [Severe] Theoretical
 - ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 2 p. 960
 - ▶ **Trimethoprim** slightly increases the exposure to **NRTIs (lamivudine)**. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** decrease the exposure to **trimethoprim**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
 - ▶ **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical
- Trimipramine** → see tricyclic antidepressants
- Triptans** → see TABLE 13 p. 963 (serotonin syndrome)

almotriptan · eletriptan · frovatriptan · naratriptan · rizatriptan · sumatriptan · zolmitriptan

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **eletriptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
- ▶ **Triptans (frovatriptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Mild] Study
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study

- ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to triptans (**rizatriptan, sumatriptan**). Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to triptans (**rizatriptan, sumatriptan**). Avoid. [Moderate] Study → Also see TABLE 13 p. 963
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Study → Also see TABLE 13 p. 963
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 963
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Severe] Theoretical → Also see TABLE 13 p. 963
- ▶ **Vemurafenib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
- Tropicamide** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tropicamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- Tropisium** → see TABLE 10 p. 962 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tropisium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 962
- Tryptophan** → see TABLE 13 p. 963 (serotonin syndrome)
- ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
- ▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 963
- Tucatinib**
- ▶ **Tucatinib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** markedly increases the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **bupirone**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **colchicine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **darifenacin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **HIV-protease inhibitors (darunavir, tipranavir)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **naloxegol**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **opioids (alfentanil)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **talazoparib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. [Moderate] Theoretical
- Typhoid vaccine, oral** → see live vaccines
- Ulipristal**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampnel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

Ulipristal (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [\[Severe\]](#) Theoretical
- ▶ **Desogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **desogestrel**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Etonogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [\[Severe\]](#) Theoretical
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **NNR1s (efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical

- ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal
- ▶ **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 566. [\[Severe\]](#) Anecdotal

Umeclidinium → see TABLE 10 p. 962 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **umeclidinium**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 962

Upadacitinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **upadacitinib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **upadacitinib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Grapefruit** is predicted to increase the exposure to **upadacitinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **upadacitinib**. [\[Moderate\]](#) Study

Urokinase → see TABLE 3 p. 960 (anticoagulant effects)**Ursodeoxycholic acid**

- ▶ **Oral antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [\[Severe\]](#) Theoretical

Ustekinumab → see monoclonal antibodies**Vaborbactam**

- ▶ **Vaborbactam** is predicted to increase the concentration of **beta blockers, selective (metoprolol)**. [\[Unknown\]](#) Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **SNRIs (venlafaxine)**. [\[Unknown\]](#) Theoretical
- ▶ **Valaciclovir** → see TABLE 2 p. 960 (nephrotoxicity)
- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Valaciclovir** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. [\[Moderate\]](#) Theoretical
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
- ▶ **Valganciclovir** → see TABLE 15 p. 963 (myelosuppression), TABLE 2 p. 960 (nephrotoxicity)
- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbapenems (imipenem)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Valproate** → see antiepileptics
- ▶ **Valsartan** → see angiotensin-II receptor antagonists

- Vancomycin** → see TABLE 2 p. 960 (nephrotoxicity), TABLE 19 p. 964 (ototoxicity)
- Vandetanib** → see TABLE 9 p. 962 (QT-interval prolongation)
- ▶ **Vandetanib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
 - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **vandetanib**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **vandetanib**. [Moderate] Study → Also see TABLE 9 p. 962
 - ▶ **Vandetanib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. [Severe] Study
 - ▶ **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose. [Severe] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
 - ▶ **Vandetanib** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). [Unknown] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
 - ▶ **Vandetanib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Vandetanib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Vandetanib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Vandetanib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
 - ▶ **Vardenafil** → see phosphodiesterase type-5 inhibitors
 - ▶ **Varicella-zoster immunoglobulin** → see immunoglobulins
 - ▶ **Varicella-zoster vaccine** → see live vaccines
 - ▶ **Vecuronium** → see neuromuscular blocking drugs, non-depolarising
 - ▶ **Vedolizumab** → see monoclonal antibodies
 - ▶ **Velpatasvir**
 - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
 - ▶ **Oral antacids** are predicted to decrease the concentration of oral **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
 - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). [Severe] Theoretical
 - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
 - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [Moderate] Study
 - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Velpatasvir** with sofosbuvir slightly increases the exposure to **statins (atorvastatin)**. [Severe] Study
 - ▶ **Velpatasvir** with sofosbuvir is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Monitor adverse effects and adjust dose. [Severe] Theoretical
 - ▶ **Velpatasvir** moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose and monitor adverse effects, p. 146. [Severe] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical

Velpatasvir (continued)

- ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- ▶ **Velpatasvir** increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical

Vemurafenib → see TABLE 9 p. 962 (QT-interval prolongation)

- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Vemurafenib** slightly to moderately decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to decrease the concentration of **bupropion**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Ciclosporin** might affect the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose. [Severe] Theoretical
- ▶ **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (sitagliptin)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **endothelin receptor antagonists (ambrisentan)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **factor XA inhibitors (rivaroxaban)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Gefitinib** might affect the exposure to **vemurafenib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (ipilimumab)** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical → Also see TABLE 9 p. 962

- ▶ **Vemurafenib** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p.962
 - ▶ **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **SNRIs (duloxetine)**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). Use with caution and adjust dose. [Unknown] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
 - ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p.962
 - ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 324. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p.962
- Venetoclax**
- FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Severe] Study
 - ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Eltrombopag** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
 - ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Ivacaftor** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
 - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study

Venetoclax (continued)

- ▶ Venetoclax is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ Venetoclax is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ Venetoclax is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ Venetoclax is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Terflunomide** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ Venetoclax is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [Severe] Study
- ▶ Venetoclax is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical

Venlafaxine → see SNRIs

Verapamil → see calcium channel blockers

Vericiguat → see TABLE 8 p. 961 (hypotension)

Vernakalant → see antiarrhythmics

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta₂ agonists

Vidagliflozin → see dipeptidylpeptidase-4 inhibitors

Vinblastine → see vinca alkaloids

Vinca alkaloids → see TABLE 1 p. 960 (hepatotoxicity), TABLE 15 p. 963 (myelosuppression), TABLE 19 p. 964 (ototoxicity), TABLE 12 p. 963 (peripheral neuropathy), TABLE 5 p. 961 (thromboembolism), TABLE 9 p. 962 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 12 p. 963 → Also see TABLE 9 p. 962
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 963
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 963
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 12 p. 963
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 960 → Also see TABLE 9 p. 962
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Ciclosporin** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Ivacaftor** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Lapatinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (azithromycin)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **Neratinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 960
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 963 → Also see TABLE 9 p. 962
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **vinca alkaloids (vinblastine, vincristine)**. [Severe] Theoretical
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 960 → Also see TABLE 15 p. 963
- ▶ **Ranolazine** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rucaparib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 963
- ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Vandetanib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962
- ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 962

Vincristine → see vinca alkaloids

Vindesine → see vinca alkaloids

Vinflunine → see vinca alkaloids

Vinorelbine → see vinca alkaloids

Vismodegib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · ergocalciferol · paricalcitol · tacalcitol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalfiferol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

Vitamin E substances

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. [Severe] Theoretical

Volanesorsen

- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 960) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 960) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical

Volatile halogenated anaesthetics → see TABLE 8 p. 961

(hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 962
 - ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
 - ▶ **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated anaesthetics**. Avoid **methylphenidate** on day of surgery, p. 256. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- Voriconazole** → see antifungals, azoles
- Vortioxetine** → see TABLE 13 p. 963 (serotonin syndrome), TABLE 4 p. 960 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **vortioxetine**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 963 → Also see TABLE 4 p. 960
 - ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Voxilaprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of **factor XA inhibitors (edoxaban)**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Voxilaprevir (continued)

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (atorvastatin)**. Adjust **atorvastatin** dose, p. 145. [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust **pravastatin** dose. [Moderate] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [Severe] Theoretical

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zidovudine → see NRTIs

Zinc

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ Oral **zinc** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
 - ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **zinc**. [Moderate] Study
 - ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid **zinc** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
 - ▶ Oral **zinc** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
 - ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study
 - ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical
 - ▶ Oral **zinc** is predicted to decrease the efficacy of oral **iron** and oral **iron** is predicted to decrease the efficacy of oral **zinc**. [Moderate] Study
 - ▶ Oral **zinc** is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [Moderate] Theoretical
 - ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [Mil] Theoretical
 - ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
 - ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
 - ▶ **Trientine** potentially decreases the absorption of **zinc**. [Moderate] Theoretical
- Zoledronate** → see bisphosphonates
- Zolmitriptan** → see triptans
- Zolpidem** → see TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [Moderate] Study
 - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **zolpidem**. [Severe] Theoretical
 - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **zolpidem**. [Moderate] Study
- Zonisamide** → see antiepileptics
- Zopiclone** → see TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 962
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Mifotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Zuclopenthixol** → see TABLE 8 p. 961 (hypotension), TABLE 9 p. 962 (QT-interval prolongation), TABLE 11 p. 962 (CNS depressant effects)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **zuclopenthixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 11 p. 962
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 961 → Also see TABLE 9 p. 962
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 961
 - ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 962

Appendix 2

Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page	1194
Enteral feeds (non-disease specific): less than 5 g protein/100 mL		1194
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL		1195
Enteral feeds (non-disease specific): Child under 12 years		1198
Nutritional supplements (non-disease specific)		1202
Nutritional supplements: less than 5 g protein/100 mL		1202
Nutritional supplements: 5 g (or more) protein/100 mL		1205
Specialised formulas		1214
Specialised formulas: Infant and child		1214
Specialised formulas for specific clinical conditions		1218
Feed supplements		1222
High-energy supplements		1222
Fibre, vitamin, and mineral supplements		1225
Feed additives		1227
Special additives for conditions of intolerance		1227

Feed thickeners and pre-thickened drinks	page	1227
Flavouring preparations		1228
Foods for special diets		1228
Gluten-free foods		1228
Low-protein foods		1230
Nutritional supplements for metabolic diseases		1233
Glutaric aciduria (type 1)		1233
Glycogen storage disease		1234
Homocystinuria or hypermethioninaemia		1234
Hyperlysinaemia		1235
Isovaleric acidemia		1235
Maple syrup urine disease		1235
Methylmalonic or propionic acidemia		1236
Other inborn errors of metabolism		1236
Phenylketonuria		1237
Tyrosinaemia		1241

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish

sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers. **Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Paediatric ACBS indications: Disease-related malnutrition, intractable malabsorption, growth failure, pre-operative preparation of malnourished patients, dysphagia, short-bowel syndrome, bowel fistula

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Dermatitis, Eczema and Pruritus

Aveeno[®] Cream; *Aveeno*[®] Lotion; *E45*[®] Emollient Bath Oil; *E45*[®] Emollient Wash Cream

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark[®] classic foundation and finishing powder; *DermaColor*[®] Camouflage cream and fixing powder; *Keromask*[®] finishing powder and masking cream; *Veil*[®]

Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

AS Saliva Orthana®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

Photodermatoses (skin protection in)

Sunsense® Ultra (Ego) SPF 50+; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

Table 1 Enteral feeds (non-disease specific)

Enteral feeds (non-disease specific): less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin 1500 Complete liquid: 1.5 litre = £16.50
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.0 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin Original Fibre liquid: 500 ml = £6.26; 1000 ml = £11.81
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original tube feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 0.85 g)	3.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also Refsum's Disease.	Fresubin Original tube feed liquid: 500 ml = £5.95; 1000 ml = £10.40; 1500 ml = £15.60
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cow's milk, pea, soya, whey proteins	12.3 g (sugars 0.7 g)	3.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1192.	Nutrison liquid: 500 ml = £5.91; 1000 ml = £10.38; 1500 ml = £15.59
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g caseinate, pea, soya, whey proteins	12.3 g (sugars 0.8 g)	3.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Nutrison Multi Fibre liquid: 500 ml = £6.39; 1000 ml = £12.03; 1500 ml = £18.02
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

SOYA PROTEIN FORMULA

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	12.1 g (sugars 4.1 g)	3.6 g	2 g	Contains fish oil, soya. Gluten-free, lactose-free	Borderline substances standard ACBS indications p. 1192 except dysphagia. Also cows' milk protein intolerance, lactose intolerance.	Fresubin Soya Fibre liquid: 500 ml = £6.05
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soya protein isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also cow's milk protein and lactose intolerance.	Nutrison Soya liquid: 500 ml = £6.38; 1000 ml = £12.79
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g soya protein	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also cows' milk protein and lactose intolerance.	Nutrison Soya Multi Fibre liquid: 1500 ml = £21.27
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
PEPTIDE-BASED FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison® Peptisorb (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also growth failure.	Nutrison Peptisorb liquid: 500 ml = £9.31; 1000 ml = £16.78
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Peptamen® liquid unflavoured (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	13 g (sugars 0.48 g)	3.7 g (MCT 70%)	Nil	Contains residual lactose, soya. Gluten-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid unflavoured: 500 ml = £7.52; 1000 ml = £14.12
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4.5-4.7 g whey protein hydrolysate	14.1-14.3 g (sugars 1.1-5 g)	2.8 g (MCT 48-51%)	less than or equal to 0.1 g	Contains fish oil (tube feed only), residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192; also growth failure.	Survimed OPD liquid: 500 ml = £9.23; 800 ml = £13.56; 1000 ml = £17.47
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Peptamen® Junior 0.6 (Nestle Health Science)	Liquid (tube feed) per 100 mL	254 kJ (60 kcal)	2.3 g whey protein	6.8 g (sugars 1.5 g)	2.5 g (MCT 36%)	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease-related malnutrition in patients with malabsorption and/or maldigestion who have reduced energy requirements.	Peptamen Junior 0.6 liquid: 500 ml = £7.32
Not suitable for use in child under 1 year									
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL									
Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192	Fresubin 2250 Complete liquid: 1.5 litre = £18.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, whey proteins	18.8 g (sugars 1.1-6.3)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Fresubin Energy liquid unflavoured: 200 ml = £1.40; 500 ml = £6.88; 1000 ml = £12.99; 1500 ml = £19.43
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Energy Fibre Tube Feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Fresubin Energy Fibre liquid unflavoured: 500 ml = £7.50; 1000 ml = £14.14
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	17 g (sugars 1 g)	5.8 g (MCT 57%)	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also CAPD and haemodialysis.	Fresubin HP Energy liquid: 500 ml = £6.95; 1000 ml = £13.09
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Fresubin® HP Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	16.2 g (sugars 1.11 g)	5.8 g (MCT 57%)	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia. Also CAPD and haemodialysis.	Fresubin HP Energy Fibre liquid: 500 ml = £7.65; 1000 ml = £14.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g caseinate, pea, soya, whey proteins	18.3 g (sugars 1.1 g)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192	Nutrison Energy liquid: 500 ml = £6.89; 1000 ml = £12.96; 1500 ml = £19.40
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	640 kJ (153 kcal)	6 g caseinates, pea, soya, whey proteins	18.4 g (sugars 2.4 g)	5.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Nutrison Energy Multi Fibre liquid: 500 ml = £7.65; 1000 ml = £14.39; 1500 ml = £22.21
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Peptisorb Plus HEHP (Nutricia Ltd)	Liquid (tube feed) per 100 ml	631 kJ (150 kcal)	7.5 g whey protein hydrolysate	18.7 g (sugars 1.4 g)	5 g (MCT 60%)	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Nutrison Peptisorb Plus HEHP liquid: 500 ml = £9.28; 1000 ml = £17.47
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g caseinates, pea, soya, whey proteins	16.9 g (sugars 3.3 g)	5.8 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Nutrison Protein Plus Energy liquid: 500 ml = £6.89; 1000 ml = £12.97
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1000 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	418 kJ (100 kcal)	5.5 g milk protein	12.5 g (sugars 1.1 g)	2.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192	Fresubin 1000 Complete liquid: 1 litre = £12.58
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Fresubin® 1200 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Fresubin 1200 Complete liquid: 1 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 1800 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Fresubin 1800 Complete liquid: 1.5 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® 800 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	345 kJ (83 kcal)	5.5 g caseinate, pea, soya, whey proteins	8.8 g (sugars 0.6 g)	2.5 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except bowel fistula.	Nutrison 800 Complete Multi Fibre liquid: 1000 ml = £12.58
Not suitable for use in child under 6 years; not recommended for child under 12 years									
Nutrison® 1000 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	440 kJ (104 kcal)	5.5 g caseinate, pea, soya, whey proteins	11.3 g (sugars 0.8 g)	3.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition in patients with low energy and/or low fluid requirements.	Nutrison 1000 Complete Multi Fibre liquid: 1000 ml = £13.35
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® 1200 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (124 kcal)	5.5 g caseinates, pea, soya, whey proteins	15 g (sugars 1 g)	4.3 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except bowel fistula.	Nutrison 1200 Complete Multi Fibre liquid: 1000 ml = £14.12; 1500 ml = £21.21
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® MCT (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	5 g caseinates	12.6 g (sugars 1 g)	3.3 g (MCT 61%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Nutrison MCT liquid: 1000 ml = £12.02
Not suitable for use in child under 1 year; not recommended for child 1–6 years									
Nutrison® Protein Plus (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (125 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.2 g (sugars 0.9 g)	4.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus liquid: 500 ml = £6.37; 1000 ml = £12.34
Not suitable for use in child under 1 year; not recommended for child 1–6 years									
Nutrison® Protein Plus Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	535 kJ (128 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.1 g (sugars 1 g)	4.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus Multifibre liquid: 500 ml = £7.08; 1000 ml = £13.76
Not suitable for use in child under 1 year; not recommended in child 1–6 years									

Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Peptamen® HN (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	559 kJ (133 kcal)	6.6 g whey protein hydrolysate	16 g (sugars 1.4 g)	4.9 g (MCT 69%)	Nil	Contains meat derivatives, residual lactose, soya. Gluten-free	Impaired gastrointestinal function, short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease and bowel fistula or with higher nutritional requirements.	Peptamen HN liquid: 500 ml = £8.09; 1000 ml = £15.20
Not suitable for use in child under 3 years									
Survimed® OPD HN (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	560 kJ (133 kcal)	6.7 g whey protein hydrolysate	18.3 g (sugars 1.3 g)	3.7 g (MCT 52%)	less than or equal to 0.1 g	Contains fish oil, residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192; also haemodialysis and continuous ambulatory peritoneal dialysis.	Survimed OPD HN liquid: 500 ml = £8.94
Not suitable for use in child under 3 years; not recommended for use in child under 6 years									
Enteral feeds: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2kcal HP (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	17.5 g (sugars 2.5 g)	10 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Fresubin 2kcal HP tube liquid feed: 500 ml = £8.43
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Fresubin® 2kcal HP Fibre (Fresenius Kabi Ltd)	Liquid per 100 mL	840 kJ (200 kcal)	10 g milk protein	16.7 g (sugars 2.5 g)	10 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192.	Fresubin 2kcal HP Fibre tube feed liquid: 500 ml = £9.99
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Enteral feeds (non-disease specific): Child under 12 years									
Enteral feeds, Child: Less than 1 kcal/mL and less than 4 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrin® Low Energy Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	320 kJ (76 kcal)	2 g caseinates, whey protein	9.3 g (sugars 0.6 g)	3.3 g	0.7 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192 except bowel fistula; also total gastrectomy.	Nutrin Low Energy Multifibre liquid: 200 ml = £3.16; 500 ml = £8.06
Not suitable for use in child under 1 year; not recommended for child over 6 years									
Nutriprem® 2 Powder (Nutricia Ltd)	Standard dilution (14.7% w/v) of powder per 100 mL	301 kJ (72 kcal)	2 g casein, whey protein	7.2 g lactose (sugars 6 g)	3.8 g	0.6 g	Contains egg, fish oil, lactose, soya	Catch-up growth in pre-term infants (ie less than 35 weeks at birth) and small for gestational age infants, until 6 months corrected age.	Nutriprem 2 powder: 800 gram = £10.85
Powder provides: protein 13.5 g, carbohydrate 49.1 g, fat 25.9 g, energy 2052 kJ (490 kcal)/100 g Not suitable for use in child over 6 months corrected age									
SMA Gold Prem® 2 powder (SMA Nutrition)	Standard dilution (14% w/v) of powder per 100 mL	306 kJ (73 kcal)	2 g whey protein	7.7 g (sugars 5.5 g)	3.8 g	Nil	Contains fish oil, lactose	Preterm and low birthweight infants.	SMA Gold Prem 2 powder: 800 gram = £10.95
Powder provides: protein 14 g, carbohydrate 53 g, fat 26 g, energy 2123 kJ (507 kcal)/100 g									

SMA [®] Anti-Reflux (SMA Nutrition)	Standard dilution (13% w/v) of powder per 100 mL	280 kJ (67 kcal)	1.3g whey protein	7.8 g (sugars 4.9 g)	3.4 g	0.065 g	Contains fish oil, lactose	Significant reflux (regurgitation). Not to be used in conjunction with any other thickener or antacid products.	SMA Anti-Reflux powder: 800 gram = £8.41
Powder provides: protein 9.8 g, carbohydrate 60 g, fat 26 g, energy 2150 kJ (514 kcal)/100 g Not recommended for child over 1 year									
Enteral feeds, Child: 1 kcal/mL and less than 4 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Frebini [®] Original (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	2.5 g milk protein	12.5 g (sugars 0.9 g)	4.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 and growth failure.	Frebini Original liquid: 500 ml = £8.23
Not suitable for use in child under 1 year or in adults; not recommended for child over 10 years									
Frebini [®] Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	2.5 g milk protein	12.1 g (sugars 0.9 g)	4.5 g	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also proven inflammatory bowel disease, and following total gastrectomy.	Frebini Original Fibre liquid: 500 ml = £9.14
Not suitable for use in child under 1 year or in adults; not recommended for child over 10 years									
Infatrini [®] (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	418 kJ (100 kcal)	2.6 g milk, whey proteins	10.2 g (sugars 5.9 g)	5.3 g	0.6 g	Contains fish oil, lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption, and growth failure.	Infatrini liquid: 125 ml = £1.64; 200 ml = £2.62; 500 ml = £7.14
Not recommended for child over 18 months									
Nutrini [®] (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	2.7 g caseinate, whey protein	12.3 g (sugars 0.8 g)	4.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192.	Nutrini liquid: 200 ml = £3.30; 500 ml = £8.21
Not suitable for use in child under 1 year; not recommended for child over 6 years									
Nutrini [®] Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (101 kcal)	2.7 g caseinates, whey protein	12.3 g (sugars 0.8 g)	4.4 g	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also proven inflammatory bowel disease, following total gastrectomy.	Nutrini Multifibre liquid: 200 ml = £3.65; 500 ml = £9.11
Not suitable for use in child under 1 year, not suitable for use in child over 6 years									
PaediaSure [®] (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	422 kJ (101 kcal)	2.8 g caseinate, milk protein isolate, whey protein	11.2 g (sugars 3.7 g)	5 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192.	PaediaSure liquid: banana, chocolate, strawberry, vanilla 200 ml = £3.00; vanilla 500 ml £8.32
Not suitable for use in child under 1 year; not recommended for child over 10 years									
PaediaSure [®] Fibre (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	424 kJ (101 kcal)	2.8 g caseinates, whey protein	10.9 g (sugars 3.8 g)	5 g	0.7 g	Contains residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192.	PaediaSure fibre liquid: banana, strawberry, vanilla 200 ml = £3.16; vanilla 500ml = £9.24
Not suitable for use in child under 1 year; not recommended for child over 10 years

Gluten-free	Borderline substances standard ACBS indications p. 1192 and growth failure.	PaediaSure Peptide liquid: 200 ml = £4.67; 500 ml = £12.98;
Not suitable for use in child under 1 year									
Tentri® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.3 g caseinates, whey protein	12.3 g (sugars 0.8 g)	4.2 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also inflammatory bowel disease and total gastrectomy.	Tentri liquid: 500 ml = £7.24
Not suitable for use in child under 1 year; not recommended for child under 6 years, not recommended for child over 12 years									
Tentri® Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (102 kcal)	3.3 g caseinates, whey protein	12.3 g (sugars 0.8 g)	4.2 g	1.1 g	Contains fish oil, residual lactose, soya	Borderline substances paediatric ACBS indications p. 1192 except bowel fistula; also inflammatory bowel disease, and total gastrectomy.	Tentri Multifibre liquid: 500 ml = £7.97
Not suitable for use in child under 1 year; not recommended for child 1-6 years, not recommended for child over 12 years									
HYDROLYSATE FORMULA									
Enteral feeds, Child: 1 kcal/mL and less than 4 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutri® Peptisorb (Nutricia Ltd)	Liquid (tube feed) per 100 mL	419 kJ (100 kcal)	2.8 g whey protein hydrolysate	13.6 g (sugars 0.43 g)	3.9 g (MCT 46%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 and growth failure.	Nutri Peptisorb liquid: 500 ml = £12.83
Not suitable for use in child under 1 year; not recommended for child over 6 years									
Peptamen® Junior Liquid (Nestle Health Science)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3 g whey protein hydrolysate	13 g (sugars 2.5 g)	4 g (MCT 60%)	less than 1 g	Contains residual lactose, soya. Gluten-free	Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen Junior liquid: 500 ml = £7.51
Not suitable for use in child under 1 year; not recommended for child over 10 years									
Enteral feeds, Child: More than 1 kcal/mL and less than 4 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Compleat® Paediatric (Nestle Health Science)	Liquid (tube feed) per 100 mL	492 kJ (117 kcal)	3.6 g chicken, milk proteins	14 g (sugars 1.29 g)	5 g	1 g	Contains fish oil, meat derivatives, residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192; also feeding intolerance, and developmental disabilities.	Compleat Paediatric: 500 ml = £6.85
Suitable from 1 year									
Frebini® Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	3.8 g milk protein	18.7 g (sugars 2.5 g)	6.7 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also growth failure.	Frebini Energy liquid unflavoured: 500 ml = £10.33
Not suitable for use in child under 1 year or in adults; not recommended for child over 10 years									

Frebini® Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	3.8 g milk protein	18.1 g (sugars 2.5 g)	6.67 g	1.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 and growth failure.	Frebini Energy Fibre liquid unflavoured: 500 ml = £10.67
Not suitable for use in child under 1 year; not recommended for child over 10 years									
Enteral feeds, Child: 1.5 kcal/mL and more than 4 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrini® Peptisorb Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	4.2 g whey protein hydrolysate	18.6 g (sugars 0.4 g)	6.6 g (MCT 52%)	Less than 0.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also proven inflammatory bowel disease and following total gastrectomy.	Nutrini Peptisorb Energy liquid: 500 ml = £12.84
Not suitable for use in child under 1 year; not suitable for use in child over 6 years									
Nutrini® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	4 g caseinates, whey protein	18.5 g (sugars 1.1 g)	6.7 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also patients with proven inflammatory bowel disease, following total gastrectomy.	Nutrini Energy liquid: 200 ml = £4.02; 500 ml = £10.31
Not suitable for use in child under 1 year; not suitable for use in child over 6 years									
Nutrini® Energy Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	635 kJ (151 kcal)	4 g caseinates, whey protein	18.5 g (sugars 1.1 g)	6.7 g	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192 except bowel fistula; also total gastrectomy.	Nutrini Energy Multifibre liquid: 200 ml = £4.25; 500 ml = £10.65
Not suitable for use in child under 1 year; not suitable for use in child over 6 years									
PaediaSure® Plus (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	628-632 kJ (150-151 kcal)	4.2 g caseinates, whey protein	16.7 g (sugars 2.2-5.5 g)	7.5 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192.	PaediaSure Plus liquid: banana, strawberry, unflavoured, vanilla 200 ml = £3.87; vanilla 500 ml = £10.45
Not suitable for use in child under 1 year; not recommended for child over 10 years									
PaediaSure® Plus fibre (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	635 kJ (152 kcal)	4.2 g caseinates, milk protein	16.4 g (sugars 2.2-6.0 g)	7.5 g	1.1 g	Contains residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192.	PaediaSure Plus fibre liquid: banana, chocolate, strawberry, vanilla 200 ml = £4.18; vanilla 500 ml = £10.79
Not suitable for use in child under 1 year; not recommended for child over 10 years									
Peptamen® Junior Advance (Nestle Health Science)	Liquid (tube feed) per 100 mL	632 kJ (151 kcal)	4.5 g whey protein hydrolysate	18 g (sugars 2.1 g)	6.6 g (MCT 61%)	0.7 g	Contains fish oil, residual lactose, soya. Gluten-free.	Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Peptamen Junior Advance liquid: 500 ml = £8.57
Not suitable for use in child under 1 year; not recommended for child over 10 years									
Tentri® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	4.8 g caseinate, whey protein	18.5 g (sugars 1.1 g)	6.3 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also inflammatory bowel disease and total gastrectomy.	Tentri Energy liquid: 500 ml = £8.95
Not suitable for use in child under 1 year; not recommended for child under 7 years, not recommended for child over 12 years									

Enteral feeds, Child: 1.5 kcal/mL and more than 4 g protein/100 mL (product list continued)

Gluten-free	Borderline substances paediatric ACBS indications p. 1192 except bowel fistula; also inflammatory bowel disease and total gastrectomy.	Tentrim Energy Multifibre liquid: 500 ml = £9.85
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Table 2 Nutritional supplements (non-disease specific)									
Nutritional supplements: less than 5 g protein/100 mL									
Nutritional supplements: 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028 [®] Extra liquid (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra liquid: grapefruit, orange & pineapple, summer fruits 250 ml = £4.28
Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Elemental 028 [®] Extra powder (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	374 kJ (89 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12 g (sugars 1.1 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra powder: banana, orange, plain 100 gram = £8.33
Powder provides: protein 12.5 g, carbohydrate 59 g, fat 17.5 g, energy 1871 kJ (443 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Emsogen [®] (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	368 kJ (88 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12.0 g (sugars 1.6 g)	3.3 g (MCT 83%)	Nil		Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Emsogen powder unflavoured: 100 gram = £8.57
Powder provides: protein 12.5 g, carbohydrate 60.0 g, fat 16.4 g, energy 1839 kJ (438 kcal)/100 g Not suitable for use in child under 1 year; not recommended for use in child under 5 years									
Fortini [®] 1.0 Multi Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	420 kJ (100 kcal)	2.4 g caseinates	11.8 g (sugars 4.7 g)	4.5 g	1.5 g	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, growth failure.	Fortini 1.0 Multi Fibre liquid: banana, chocolate, strawberry, vanilla 200 ml = £2.92
Not suitable for use in child under 1 year									

Fresubin® Original drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 3.5 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192; also Refsum's Disease.	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200 ml = £2.60
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Nutriprem® 2 Liquid (Nutricia Ltd)	Liquid (sip feed) per 100 mL	301 kJ (72 kcal)	2 g casein, whey protein	7.2 g lactose (sugars 6 g)	3.8 g	0.6 g	Contains egg, fish oil, lactose, soya	Catch-up growth in pre-term infants (ie less than 35 weeks at birth) and small for gestational age infants, until 6 months corrected age.	Nutriprem 2 liquid: 200 ml = £1.81
Not suitable for use in child over 6 months corrected age									
Peptamen® liquid vanilla (Nestle Health Science)	Liquid (sip feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	12.7 g (sugars 3.3 g)	3.7 g (MCT 68%)	Nil	Contains residual lactose, soya	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid vanilla: 800 ml = £13.38
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Resource® Thickened Drink (Nestle Health Science)	Liquid (sip feed) per 100 mL	376 kJ (89 kcal)	0.4 g	21 g (sugars 9.5 g)	less than 0.1 g	Nil	Gluten-free, lactose-free	Dysphagia.	Resource Thickened Drink custard: apple, orange 114 ml = £0.78; Resource Thickened Drink syrup orange: 114 ml = £0.78
Not suitable for use in child under 3 years									
Similac® High Energy (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	419 kJ (100 kcal)	2.6 g milk, whey proteins	10.1 g (sugars 5.5 g)	5.4 g	0.4 g	Contains lactose, soya. Gluten-free	Patients who have faltering growth, increased energy requirements and/or require a fluid restriction.	Similac High Energy liquid: 200 ml = £2.69
Not recommended for child over 18 months									
SMA Gold Prem® 2 liquid (SMA Nutrition)	Liquid (sip feed) per 100 mL	306 kJ (73 kcal)	2 g whey protein	7.7 g lactose (sugars 5.5 g)	3.8 g	Nil	Contains fish oil, lactose	Preterm and low birthweight infants.	SMA Gold Prem 2 liquid: 200 ml = £1.81
SMA High Energy® (SMA Nutrition)	Liquid per 100 mL	418 kJ (100 kcal)	2.6 g whey protein	10 g (sugars 6.7 g)	5.5 g	Nil	Contains fish oil, lactose	Disease-related malnutrition, malabsorption and growth failure in infancy.	SMA High Energy liquid: 200 ml = £2.17
Not recommended for child over 18 months									
Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Altrajuce® (Nualtra Ltd)	Liquid (sip feed) per 100 ml	636 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.5 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Altrajuce Starter Pack liquid: 800 ml = £7.32; Altrajuce liquid: apple, blackcurrant, orange, strawberry 200 ml = £1.70
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Aymes® ActaSolve High Energy (Aymes International Ltd)	Powder per 100 g	2105 kJ (503 kcal)	4.8 g milk protein	63.8 g (sugar 22.5 g)	25.3 g	0.40 g	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Aymes ActaSolve High Energy Starter Pack powder: 4 sachet = £8.96; Aymes ActaSolve High Energy powder 85g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £11.76
Powder 85 g reconstituted with 240 ml whole milk provides: protein 12.3 g, carbohydrate 65.6 g, fat 30.4 g, energy 2451 kJ (586 kcal) Not suitable for use in child under 3 years; use with caution in child under 6 years									
EnergieShake® Powder (Anaiah Healthcare PVT Ltd)	Powder per 100 g	1849 kJ (439 kcal)	16.5 g milk protein	62.1 g (sugars 26.8 g)	13.9 g	Less than 1 g	Contains lactose, soya	Borderline substances standard ACBS indications p. 1192.	EnergieShake Powder Starter Pack oral powder sachets: 285 gram = £2.88; EnergieShake Powder oral powder 57g sachets: banana, chocolate, neutral, strawberry, vanilla 4 sachet = £1.76; 7 sachet = £3.08
Powder 57 g reconstituted with 200 mL water provides: protein 9.4 g, carbohydrate 35.4 g, fat 7.9 g, energy 1054 kJ (250 kcal) Not recommended for use in child under 6 years									
Ensure® Plus Juice (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	638 kJ (150 kcal)	4.8 g whey protein isolate	32.7 g (sugars 9.4 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192	Ensure Plus Juice liquid: apple, fruit punch, lemon & lime, orange, peach, strawberry 220 ml = £2.12
Not suitable for use in child under 1 year; not recommended for use in children									
Fortijuice® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	635 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.1 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192; except dysphagia.	Fortijuice Starter Pack liquid: 800 ml = £8.08; Fortijuice liquid: apple, blackcurrant, forest fruits, lemon, orange, strawberry, tropical 200 ml = £2.02; Fortisip Range Starter Pack liquid: 2 litre = £20.20
Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Fortini® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	3.3 g caseinates	18.8 g (sugars 7.4 g)	6.8 g	Nil	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, growth failure.	Fortini liquid: strawberry, vanilla 200 ml = £3.78
Not suitable for use in child under 1 year									
Fortini® Multi Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	640 kJ (153 kcal)	3.3 g caseinates	18.8 g (sugars 7.4 g)	6.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, growth failure.	Fortini Multi Fibre liquid: "banana, chocolate, strawberry, unflavoured, vanilla 200 ml = £3.96
Not suitable for use in child under 1 year									
Fortini® Smoothie Multi Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	625 kJ (150 kcal)	3.4 g whey protein	19 g (sugars 11.5 g)	6.4 g	1.4 g	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, growth failure.	Fortini Smoothie Multi Fibre liquid: berry fruit, summer fruit 200 ml = £3.96
Not suitable for use in child under 1 year									

Frebini® Energy Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	3.8 g milk protein	18.7 g (sugars 4.5 g)	6.7 g	Nil	Contains soya, residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192 and growth failure.	Frebini Energy Drink: banana, strawberry 200 ml = £3.62
Not suitable for use in child under 1 year or in adults; not recommended for child over 10 years									
Frebini® Energy Fibre Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	3.8 g milk protein	18.1 g (sugars 4.5 g)	6.7 g	1.1 g	Contains residual lactose, soya. Gluten-free	Borderline substances paediatric ACBS indications p. 1192; also proven inflammatory bowel disease and following total gastrectomy.	Frebini Energy Fibre liquid: chocolate, vanilla 200 ml = £3.69
Not suitable for use in child under 1 year or in adults; not recommended for child over 10 years									
Fresubin® Jucy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	4 g whey protein	33.5 g (sugars 8 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192; also CAPD and haemodialysis.	Fresubin Jucy drink: apple, blackcurrant, cherry, orange, pineapple 800 ml = £8.08
Not suitable for use in child under 3 years; use with caution in child under 6 years									
PaediaSure® Plus Juice (Abbott Laboratories Ltd)	Liquid (sip feed) per 100 mL	638 kJ (150 kcal)	4.20 g whey protein isolate	33.3 g (sugars 10.4 g)	Nil	Nil	Contains residual lactose. Gluten-free	Disease-related malnutrition and, or growth failure.	PaediaSure Plus Juice liquid: apple, very berry 200 ml = £3.85
Not recommended for child under 1 year									
Peptamen® Junior 1.5 (Nestle Health Science)	Liquid (sip feed) per 100 mL	632 kJ (151 kcal)	4.5 g whey protein	18 g (sugars 4.3 g)	6.6 g (MCT 61%)	0.7 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition in patients with short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen Junior 1.5 liquid: banana, vanilla 800 ml = £17.12
Not suitable for use in child under 1 year; not recommended for child over 15 years									
Resource® Junior (Nestle Health Science)	Liquid (sip feed) per 100 mL	641 kJ (153 kcal)	3 g milk protein	21 g (sugars 4.9 g)	6.2 g	0.5 g	Contains residual lactose	Borderline substances standard ACBS indications p. 1192.	Resource Junior complete sip feed: chocolate, strawberry, vanilla 200 ml = £2.27
Not suitable for use in child under 1 year; not recommended in child over 10 years

Not suitable for use in child under 6 years, not recommended for child under 10 years									
SLO® Milkshake+ (SLO Drinks Ltd)	Powder per 100 g	1649 kJ (395 kcal)	34.7 g caseinates, whey protein, soya protein isolate	50.9 g fructose (sugars 47.1 g)	5.1 g	0.5 g	Contains lactose, soya	Dysphagia.	SLO Milkshake+ IDDSI 1 Slightly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65; SLO Milkshake+ IDDSI 2 Mildly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 3 Moderately Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 4 Extremely Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65
Powder 50 g reconstituted with 200 ml whole milk provides: protein 24.2 g, carbohydrate 34.9 g, fat 10.6 g, energy 1389 kJ (334 kcal) Not suitable for use in child under 3 years									

Table 3 Specialised formulas

Specialised formulas: Infant and child

Specialised formulas: Infant and child: Amino acid-based formula

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
EleCare® (Abbott Laboratories Ltd)	Standard dilution (13% w/v) of powder per 100 mL	283 kJ (68 kcal)	1.8 g protein equivalent (amino acids)	7.2 g (sugars 0.6 g)	3.3 g	0.02 g	Contains residual lactose, soya. Gluten-free	Cow's milk allergy, severe and/or multiple food allergies or other conditions where an amino acid-based formula is indicated.	EleCare powder: 400 gram = £22.98
Powder provides: protein 14 g, carbohydrate 55.1 g, fat 25.3 g, energy 2171 kJ (519 kcal)/100 g.									
Neocate® Junior (Nutricia Ltd)	Standard dilution (21.1% of powder per 100ml)	420 kJ (100 kcal)	2.8 g protein equivalent (amino acids)	12 g (sugars 1.1 g)	4.6 g (MCT 35%)	Nil		Proven whole protein allergy, short bowel syndrome, intractable malabsorption and other gastrointestinal disorders where an amino acid diet is recommended.	Neocate Junior powder: strawberry, unflavoured, vanilla 400 gram = £30.62
Powder provides: protein 13.3 g, carbohydrate 56 g, fat 22 g, energy 1992 kJ (475 kcal)/100 g. Not suitable for use in child under 1 year									
Neocate® LCP (Nutricia Ltd)	Standard dilution (13.5% w/v) of powder per 100 mL	278 kJ (67 kcal)	1.8 g protein equivalent (amino acids)	7.1 g (sugars 0.62 g)	3.5 g	Nil		Cow's milk allergy, multiple food protein allergies and other conditions where an elemental diet is recommended.	Neocate LCP powder: 400 gram = £22.98
Powder provides: protein 13.3 g, carbohydrate 52.5 g, fat 25.6 g, energy 2062 kJ (493 kcal)/100 g.									
Neocate® Spoon (Nutricia Ltd)	Powder per 100 g	1981 kJ (472 kcal)	8.2 g protein equivalent (amino acids)	67.4 g (sugars 12.3 g)	18.8 g	Nil		Cow's milk allergy, multiple food protein allergy and other conditions requiring an amino acid-based food.	Neocate Spoon powder 37g sachets: 15 sachet = £45.75
Powder 37 g reconstituted with 60 ml water provides: protein 3 g, carbohydrate 24.9 g, fat 7 g, energy 733 kJ (175 kcal) Not suitable for use in child under 6 months									
Neocate® Syneo (Nutricia Ltd)	Standard dilution (14.4% of powder per 100ml)	286 kJ (68 kcal)	1.9 g protein equivalent (amino acids)	7.2 g (sugars 0.67 g)	3.4 g (MCT 32%)	0.64 g		Cow's milk allergy, multiple food protein allergies and other conditions requiring an amino acid-based diet.	Neocate Syneo powder: 400 gram = £24.82
Powder provides: protein 13.2 g, carbohydrate 50.2 g, fat 23.6 g, energy 1985 kJ (474 kcal)/100 g. Not recommended for child over 1 year									
Nutramigen® PurAmino (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.3% of powder per 100 mL	290 kJ (68 kcal)	1.9 g	7.2 g (sugars 0.95 g)	3.6 g	Nil	Contains soya. Lactose-free	Severe cow's milk allergy and multiple food intolerance. Suitable for other indications requiring an elemental diet.	Nutramigen PurAmino powder: 400 gram = £22.98
Powder provides: protein 13.9 g, carbohydrate 53 g, fat 26 g, energy 2100 kJ (500 kcal)/100 g.									

SMA Alfamino® (Nestle Health Science)	Standard dilution (13.3 % w/v) of powder per 100 mL	278 kJ (66 kcal)	1.8 g protein equivalent (essential and non-essential amino acids)	7.5 g (sugars 0.5 g)	3.3 g	Nil	Gluten-free, lactose-free	Dietary management of cows' milk allergy and/or multiple food allergies and other conditions where an amino acid formula is recommended.	SMA Alfamino powder: 400 gram = £22.98
Powder provides: protein 13 g, carbohydrate 56.3 g, fat 24.6 g, energy 2093 kJ (500 kcal)/100 g Not recommended for child over 3 years									
Specialised formulas: Infant and child: Hydrolysate formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alimentum® (Abbott Laboratories Ltd)	Standard dilution (12.8% w/v) of powder per 100 mL	283 kJ (67.6 kcal)	1.9 g casein hydrolysate	6.6 g (sugars 1.5 g)	3.8 g (MCT 32%)	0.02 g	Contains meat derivatives, residual lactose, soya. Gluten-free	Cow's milk protein allergy and other conditions where an extensively hydrolysed formula is indicated.	Alimentum powder: 400 gram = £10.01
Powder provides: protein 14.4 g, carbohydrate 51.2 g, fat 29.1 g, energy 2196 kJ (525 kcal)/100 g									
Aptamil Pepti® 1 (Nutricia Ltd)	Standard dilution (13.64 % w/v) of powder per 100 mL	276 kJ (66 kcal)	1.6 g whey hydrolysate	7.1 g (sugars 3.5 g)	3.4 g	0.5 g	Contains fish oil, lactose	Established cows' milk allergy with/without proven secondary lactose intolerance.	Aptamil Pepti 1 powder: 400 gram = £9.87; 800 gram = £19.73
Powder provides: protein 11.6 g, carbohydrate 51.8 g, fat 24.7 g, energy 2024 kJ (484 kcal)/100 g.									
Aptamil Pepti® 2 (Nutricia Ltd)	Standard dilution (14.43 % w/v) of powder per 100 mL	285 kJ (68 kcal)	1.6 g whey protein hydrolysate	7.8 g (sugars 3.6 g)	3.2 g	0.6 g	Contains fish oil, lactose	Established cows' milk allergy.	Aptamil Pepti 2 powder: 400 gram = £9.41; 800 gram = £18.82
Powder provides: protein 11.4 g, carbohydrate 54.3 g, fat 22.3 g, energy 1974 kJ (471 kcal)/100 g. Not suitable for use in child under 6 months									
Aptamil® Pepti Syneo (Nutricia Ltd)	Standard dilution (13.7 % w/v) of powder per 100 mL	276 kJ (66 kcal)	1.6 g whey protein hydrolysate	7.1 g (sugars 3.5 g)	3.4 g	0.6 g	Contains fish oil, lactose	Cow's milk protein allergy.	Aptamil Pepti Syneo powder: 400 gram = £10.65; 800 gram = £21.30
Powder provides: protein 11.6 g, carbohydrate 51.7 g, fat 24.7 g, energy 2023 kJ (483 kcal)/100 g									
Infatrin® Peptisorb (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	418 kJ (100 kcal)	2.6 g whey protein hydrolysate	10.2 g (sugars 2.7 g)	5.4 g (MCT 52%)	Nil	Contains fish oil, residual lactose. Gluten-free	Disease-related malnutrition, intractable malabsorption, inflammatory bowel disease, short bowel syndrome, bowel fistulae and intolerance to whole protein feeds.	Infatrin Peptisorb liquid: 200 ml = £4.01
Not recommended for child over 18 months									
Nutramigen 1 with LGG® (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5 % w/v) of powder per 100 mL	280 kJ (68 kcal)	1.9 g casein hydrolysate	7.5 g (sugars 0.9 g)	3.4 g	Nil	Contains residual lactose, soya	Cow's milk allergy with / or without lactose intolerance.	Nutramigen 1 with LGG powder: 400 gram = £11.21
Powder provides: protein 14 g, carbohydrate 55 g, fat 25 g, energy 2100 kJ (500 kcal)/100 g. Not recommended for child over 6 months									

Specialised formulas: Infant and child: Hydrolysate formula (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutramigen 2 with LGG® (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5% w/v) of powder per 100 mL	280 kJ (68 kcal)	1.7 g casein hydrolysate	8.8 g (sugars 3.9 g)	2.8 g	Nil	Contains residual lactose, soya	Cow's milk allergy with / or without lactose intolerance.	Nutramigen 2 with LGG powder: 400 gram = £11.21
Powder provides: protein 12 g, carbohydrate 62 g, fat 20 g, energy 2000 kJ (480 kcal)/100 g. Not suitable for use in child under 6 months									
Nutramigen 3 with LGG® (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5% w/v) of powder per 100 ml	280 kJ (68 kcal)	1.6 g casein hydrolysate	7.7 g (sugars: 3.5 g)	3.4 g	Nil	Contains residual lactose, soya	Cow's milk protein allergy.	Nutramigen 3 with LGG powder: 400 gram = £11.21
Powder provides: protein 11.5 g, carbohydrate 57 g, fat 25 g, energy 2100 kJ (500 kcal)/100 g Not suitable for use in child under 1 year									
Pregestimil® Lipil (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5%) of powder per 100 mL	280 kJ (68 kcal)	1.89 g casein hydrolysed	6.9 g	3.8 g (MCT 54%)	Nil	Gluten-free Lactose-free	Disaccharide and/or whole protein intolerance, or where amino acids or peptides are indicated in conjunction with medium chain triglycerides.	Pregestimil LIPIL powder: 400 gram = £12.43
Powder provides: protein 14 g, carbohydrate 51 g, fat 28 g, energy 2100 kJ (500 kcal)/100 g. Suitable for infants from birth; Child under 12 years.									
SMA Althera® (Nestle Health Science)	Standard dilution (13.2% w/v) of powder per 100 mL	280 kJ (67 kcal)	1.7 g whey protein	7.3 g lactose (sugars 4.0 g)	3.4 g	Nil	Contains lactose. Gluten-free	Dietary management of cows' milk protein allergy and/or multiple food protein allergies.	SMA Althera powder: 400 gram = £9.86
Powder provides: protein 12.5 g, carbohydrate 55.5 g, fat 26 g, energy 2118 kJ (506 kcal)/100 g Not recommended for child over 3 years									
Specialised formulas: Infant and child: Residual lactose formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
SMA LF® (SMA Nutrition)	Standard dilution (13.3% w/v) of powder per 100 mL	281 kJ (67 kcal)	1.6 g casein, whey protein	7.6 g (sugars 1.1 g)	3.4 g	Nil	Contains fish oil, residual lactose, soya	Proven lactose intolerance.	SMA LF powder: 400 gram = £5.76
Powder provides: protein 11.7 g, carbohydrate 56.7 g, fat 25.5 g, energy 2106 kJ (503 kcal)/100 g Not recommended for child over 18 months									
Specialised formulas: Infant and child: MCT-enhanced formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Aptamil Pepti-Junior® (Nutricia Ltd)	Standard dilution (13.4% w/v) of powder per 100 mL	276 kJ (66 kcal)	1.8 g whey protein	7.2 g (sugars 1.1 g)	3.4 g (MCT 50%)	Nil	Contains fish oil, residual lactose	Disaccharide and/or whole protein intolerance, or where amino acids and peptides are indicated in conjunction with MCT.	Aptamil Pepti-Junior powder: 450 gram = £15.05
Powder provides: protein 13.3 g, carbohydrate 53.5 g, fat 25.2 g, energy 2063 kJ (493 kcal)/100 g									

Lipistart® (Vitaflor International Ltd)	Standard dilution (15% w/v) of powder per 100 mL	295 kJ (70 kcal)	1.8 g whey protein	8.7 g (sugars 0.9 g)	3.2 g (MCT 73%)	Nil	Contains residual lactose	Dietary management of fat malabsorption, long-chain fatty acid oxidation disorders, and other disorders requiring a high MCT, low LCT formula.	Lipistart powder: 400 gram = £23.25
Powder provides: protein 12 g, carbohydrate 58 g, fat 21 g, energy 1967 kJ (469 kcal)/100 g. Not suitable for use in child over 10 years									
Specialised formulas: Infant and child: Soya-based formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
SMA® Wysoy (SMA Nutrition)	Powder per 100 g	2150 kJ (514 kcal)	14 g soya protein isolate	52 g (sugars 4.5 g)	27.6 g	Nil	Contains soya. Lactose-free	Proven lactose and associated sucrose intolerance in pre-school children, galactokinase deficiency, galactosaemia and proven whole cow's milk sensitivity.	SMA Wysoy powder: 800 gram = £11.32; 860 gram = £10.93
Powder 13 g reconstituted with 100 mL water provides: protein 1.8 g, carbohydrate 6.8 g, fat 3.6 g, energy 280 kJ (67 kcal)/100 g									
Specialised formulas: Infant and child: Low calcium formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Kindergen® (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	418 kJ (100 kcal)	1.5 g whey protein	11.6 g (sugars 1.6 g)	5.2 g	0.6 g	Contains fish oil, residual lactose, soya	Children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £33.89
Powder provides: protein 7.5 g, carbohydrate 57.6 g, fat 25.9 g, energy 2083 kJ (498 kcal)/100 g									
Locasol® (Nutricia Ltd)	Standard dilution (13.1% w/v) of powder per 100 mL	278 kJ (66 kcal)	1.9 g caseinates, whey protein	7 g (sugars 6.9 g)	3.4 g	Nil	Contains lactose	Calcium intolerance.	Locasol powder: 400 gram = £27.25
Powder provides: protein 14.6 g, carbohydrate 53.7 g, fat 26.1 g, energy 2125 kJ (508 kcal)/100 g									
Specialised formulas: Infant and child: Fructose-based formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Galactomin 19® (Nutricia Ltd)	Standard dilution (12.9% w/v) of powder per 100 mL	288 kJ (69 kcal)	1.9 g caseinates	6.4 g fructose (sugars 6.3 g)	4 g	Nil	Contains residual lactose	Glucose plus galactose intolerance.	Galactomin 19 powder: 400 gram = £51.58
Powder provides: protein 14.6 g, carbohydrate 49.7 g, fat 30.8 g, energy 2233 kJ (534 kcal)/100 g									

Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Forticare® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	685 kJ (163 kcal)	8.8 g milk protein	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Contains fish oil, residual lactose, soya. Minerals/100 mL: Na 4.8 mmol K 5.5 mmol Ca 4.2 mmol P 3.9 mmol Gluten-free	Patients with pancreatic cancer and patients with lung cancer undergoing chemotherapy.	Forticare liquid: cappuccino, orange & lemon, peach & ginger 500 ml = £10.68
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Heparon Junior® (Nutricia Ltd)	Standard dilution (18% w/v) of powder per 100 mL	357 kJ (85 kcal)	2.2 g whey protein	10 g (sugars 3.4 g)	4 g (MCT 50%)	0.5 g	Contains fish oil, lactose Electrolytes/100 mL: Na ⁺ 0.77 mmol K ⁺ 2.25 mmol Ca ²⁺ 2.43 mmol P ⁻ 1.68 mmol	Acute and chronic liver failure.	Heparon Junior powder: 400 gram = £25.25
Powder provides: protein 12 g, carbohydrate 55.7 g, fat 22 g, energy 1985 kJ (474 kcal)/100 g									
Kanso DeliMCT CacaoBar (Dr Schar UK Ltd)	Solid per 100 g	2394 kJ (582 kcal)	7.1 g milk protein	15.4 g polyols (sugars 1 g)	55.4 (MCT 38%) g	18.9 g	Contains nuts	Intractable epilepsy when following a ketogenic diet, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency syndrome or other conditions requiring a ketogenic diet.	Kanso DeliMCT CacaoBar: 100 gram = £5.20
Suitable from 3 years									
KetoCal® 2.5:1LQ (Nutricia Ltd)	Liquid (sip feed) per 100 mL	637 kJ (153 kcal)	4.5 g caseinates, whey protein	1.1 g (sugars 0.8 g)	14.3 g	1.1 g	Contains residual lactose, soya	Drug resistant epilepsy or other conditions for which the ketogenic diet is indicated.	KetoCal 2.5:1LQ liquid: 200 ml = £5.06
Not suitable for use in child under 8 years									
KetoCal® 3:1 (Nutricia Ltd)	Standard dilution (9.3% w/v) of powder per 100 mL	273 kJ (66 kcal)	1.4 g casein, whey protein	0.67 g (sugars 0.5 g)	6.4 g	Nil	Contains residual lactose, soya. Electrolytes/100 mL: Na ⁺ 1.4 mmol K ⁺ 2.2 mmol Ca ²⁺ 1.9 mmol P ⁻ 1.6 mmol	Drug resistant epilepsy and/or other conditions for which a ketogenic diet is indicated.	KetoCal 3:1 powder: 300 gram = £34.41
Powder provides: protein 15.4 g, carbohydrate 7.2 g, fat 68.6 g, energy 2935 kJ (711 kcal)/100 g									
KetoCal® 4:1 (Nutricia Ltd)	Standard dilution (14.2% w/v) of powder per 100 mL	411 kJ (100 kcal)	2 g casein, protein equivalent (amino acids), whey protein	0.41 g (sugars 0.14 g)	9.8 g	0.75 g	Contains residual lactose, soya. Minerals/100 mL: Na 3.3 mmol K 3.1 mmol Ca 2.7 mmol P 2.1 mmol	For use as part of the ketogenic diet in the management of epilepsy resistant to drug therapy. Only to be prescribed on the advice of a secondary care physician with experience of the ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £35.55
Powder provides: protein 14.4 g, carbohydrate 2.9 g, fat 69.2 g, energy 2897 kJ (703 kcal)/100 g Not suitable for use in child under 1 year									

KetoCal [®] 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.1 g caseinates, whey protein	0.61 g (sugars 0.39 g)	14.8 g	1.1 g	Contains residual lactose, soya. Minerals/100 mL: Na 4.9 mmol K 4.7 mmol Ca 2.4 mmol P 3.1 mmol	Drug resistant epilepsy or other conditions for which a ketogenic diet is indicated.	KetoCal 4:1LQ liquid: unflavoured, vanilla 200 ml = £5.06
Not suitable for use in child under 1 year									
KetoClassic [®] 3:1 Bar (KetoCare Foods Ltd)	Solid per 100 g	2082 kJ (498 kcal)	10.8 g soya protein	3.3 g (sugars 2.8 g)	43.6 g	28.7 g	Contains nuts, soya, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Bar: 420 gram = £23.21
Not suitable for use in child under 3 years									
KetoClassic [®] 3:1 Breakfast Muesli (KetoCare Foods Ltd)	Solid per 100 g	2569 kJ (623 kcal)	11 g	7.5 g (sugars 3.8 g)	57.1 g	17.5 g	Contains lactose, nuts, soya, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Breakfast muesli: 600 gram = £37.11
Not suitable for use in child under 3 years									
KetoClassic [®] 3:1 Breakfast Porridge (KetoCare Foods Ltd)	Solid per 100 g	2649 kJ (643 kcal)	11.7 g	7.8 g (sugars 5.4 g)	59.1 g	16.7 g	Contains lactose, nuts, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Breakfast porridge: 600 gram = £37.11
Not suitable for use in child under 3 years									
KetoClassic [®] 3:1 Meal (KetoCare Foods Ltd)	Semi-solid per 100 g	936-1182 kJ (224-287 kcal)	5.1-5.2 g	2-3.7 g (sugars 0.8-2.6 g)	21.7-26.7 g	0.4-2.1 g	Contains egg and mustard (bolognese flavour), lactose (chicken flavour), and meat	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Meal: bolognese 126g pouches 14 pouch = £80.66; chicken 135g pouches 14 pouch = £81.64; 30 pouch = £162.90
Not suitable for use in child under 3 years									
KetoClassic [®] 3:1 Savoury (KetoCare Foods Ltd)	Solid per 100 g	2190 kJ (531 kcal)	9 g	7.3 g (sugars 1.2 g)	48.7 g	13.7 g	Contains egg, lactose, nuts	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Savoury meal: 840 gram = £46.05
Not suitable for use in child under 3 years									
KetoVie [®] 4:1 (Cambrooke UK Ltd)	Liquid (sip feed) per 100 mL	602 kJ (144 kcal)	3.4 g whey protein	1.9 g	14.2 g	1.8 g	Contains lactose, soya Minerals/100 mL: Na 4.7 mmol K 2.8 mmol Ca 2.6 mmol P 3.2 mmol	Intractable epilepsy and other conditions where a ketogenic diet is indicated.	KetoVie 4:1 liquid: chocolate, vanilla 250 ml = £5.76
Not suitable for use in child under 1 year									

Specialised formulas for specific clinical conditions (product list continued)

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Keyo® (Vitafo International Ltd)	Semi-solid per 100 g	1280 kJ (310 kcal)	8 g milk protein isolate	2 g cocoa powder (sugars 1.5 g)	30 g	Nil	Contains fish oil Minerals/100 g: Na 4.9 mmol K 7.3 mmol Ca 4 mmol P 6.1 mmol	Epilepsy in a ketogenic diet, glut 1 deficiency syndrome or other conditions requiring a ketogenic diet.	K.Yo semi-solid food 100g pots: 4 pot = £28.27; 36 pot = £190.81
Not suitable for use in child under 3 years									
Liquigen® (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1865 kJ (454 kcal)	Nil	Nil	50.4 g (MCT 97.4%)	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, a ketogenic diet in the management of epilepsy, and in type 1 hyperlipoproteinaemia.	Liquigen emulsion: 250 ml = £10.80
MCT Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	95 g MCT 100%	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia.	MCT oil: 500 ml = £17.13
Modulen IBD® (Nestle Health Science)	Standard dilution (20% w/v) of powder (sip feed) per 100 mL	414 kJ (100 kcal)	3.6 g casein	11 g (sugars 4.2 g)	4.6 g	Nil	Contains residual lactose, soya. Gluten-free Minerals/100 mL: Na 1.5 mmol K 3 mmol Ca 2.2 mmol P 1.9 mmol	Sole source of nutrition during active phase of Crohn's disease, and nutritional support during remission phase for malnourished patients.	Modulen IBD powder: 400 gram = £16.19
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g Not suitable for use in child under 6 years									
Monogen® (Nutricia Ltd)	Standard dilution (16.8% w/v) of powder per 100 mL	312 kJ (74 kcal)	2.2 g caseinate, whey protein	11.5 g (sugars 2 g)	2.2 g (MCT 84%)	Nil	Contains lactose, nuts	For the dietary management of disorders requiring a low LCT, high MCT intake, such as long chain fatty acid oxidation defects (long-chain acyl-CoA dehydrogenase deficiency (LCAD), carnitine palmitoyl transferase deficiency (CPTD)), primary and secondary lipoprotein lipase deficiency (hyperlipoproteinaemia type 1) chylothorax, lymphangiectasia.	Monogen powder: 400 gram = £23.67
Powder provides: protein 12.8 g, carbohydrate 68.6 g, fat 12.9 g, energy 1859 kJ (441 kcal)/100 g									

Renamil® (Stanningley Pharma Ltd)	Powder per 100 g	2012 kJ (479 kcal)	5 g milk protein, whey protein isolate	71.2 g (sugars 6.8 g)	19.3 g	Nil	Contains lactose, soya. Gluten-free Minerals/100 mL: Na 3 mmol K 0.1 mmol Ca 3.7 mmol P 0.8 mmol	Chronic renal failure.	Renamil powder 100g sachets: 10 sachet = £25.40
Not suitable for use in child under 1 year									
Renastart® (Vitafo International Ltd)	Standard dilution (20%) of powder per 100 mL	419 kJ (100 kcal)	1.5 g caseinates, whey protein	12.6 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Minerals/100 mL: Na 2.1 mmol K 0.6 mmol Ca 0.6 mmol P 0.6 mmol	Renal failure.	Renastart powder: 400 gram = £31.64
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 24 g, energy 2078 kJ (496 kcal)/100 g. Not recommended for child over 10 years									
Renastep® (Vitafo International Ltd)	Liquid (sip or tube feed) per 100 mL	836 kJ (200 kcal)	4 g milk protein	21 g (sugars 3.4 g)	11.1 g	Nil	Contains fish oil Minerals/100 mL: Na 3.6 mmol K 0.9 mmol Ca 1.2 mmol P 1.1 mmol	Renal failure.	Renastep liquid: 125 ml = £4.95
Not suitable for use in child under 3 years									
Respifor® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	635 kJ (150 kcal)	7.5 g milk protein	22.6 g (sugars 6 g)	3.3 g	Nil	Contains lactose, soya Minerals/100 mL: Na 2.4 mmol K 2.8 mmol Ca 3.9 mmol P 3.2 mmol	Disease related malnutrition in patients with chronic obstructive pulmonary disease (COPD) with a body mass index (BMI) of less than 20.	Respifor milkshake style liquid: chocolate, strawberry, vanilla 500 ml = £10.16
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Supportan® (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g milk protein	11.6 g sucrose (sugars 7 g)	6.7 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free Minerals/100 mL: Na 2.1 mmol K 3.3 mmol Ca 5.1 mmol P 3.9 mmol	Patients with pancreatic cancer or patients with lung cancer undergoing chemotherapy.	Supportan drink: cappuccino, tropical fruits 800 ml = £12.72
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Table 4 Feed supplements**High-energy supplements****High-energy supplements: carbohydrate**

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul® Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 8.6 g)	Nil	Nil	Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble: powder 132g sachets 4 sachet = £7.52; powder 200 gram = £3.02; 25000 gram = £181.55
Powder 75 g reconstituted with 150 ml water provides: protein Nil, carbohydrate 31.4 g, fat Nil, energy 533 kJ (125 kcal)/100 g									
Polycal® liquid (Nutricia Ltd)	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g (sugars 12.2 g)	Nil	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal liquid: neutral, orange 200 ml = £2.04
Not suitable for use in child under 3 years									
Polycal® powder (Nutricia Ltd)	Standard dilution (10% w/v) of powder per 100 mL	82 kJ (19 kcal)	Nil	4.8 g (sugars 0.3 g)	Nil	Nil		Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £5.15
Powder provides: protein Nil g, carbohydrate 96 g, fat Nil g, energy 1630 kJ (384 kcal)/100 g Not suitable for use in child under 1 year, not recommended for child 1-6 years									
Vitajoule® (Vitafo International Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil		Disease related malnutrition, malabsorption states, other conditions requiring fortification with carbohydrate and as a carbohydrate source in modular feeds.	Vitajoule powder: 500 gram = £5.23

High-energy supplements: fat

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Betaquik® (Vitafo International Ltd)	Liquid (sip feed) per 100 mL	777 kJ (189 kcal)	Nil	Nil	21 g (MCT 95%)	Nil		Ketogenic diet or conditions requiring a source of MCT.	Betaquik liquid: 225 ml = £3.83
Not suitable for use in child under 3 years									
Calogen® (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g (sugar Nil)	50 g	Nil	Banana and strawberry flavours not suitable for child under 3 years. Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat supplement, with or without fluid and electrolyte restrictions.	Calogen emulsion: neutral, strawberry 200 ml = £5.24; banana, neutral, strawberry 500 ml = £12.89

Fresubin® 5kcal shot (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	2100 kJ (500 kcal)	Nil	4 g sucrose (sugars 4 g)	53.8 g	0.4 g	Gluten-free, lactose-free	Disease related malnutrition malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid or electrolyte restrictions.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £12.52
Not suitable for use in child under 3 years									
FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 38%)	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Duocal Super Soluble powder: 400 gram = £21.09
Energivit® (Nutricia Ltd)	Standard dilution (15% w/v) of powder per 100 mL	309 kJ (74 kcal)	Nil	10 g (sugars 0.9 g)	3.8 g	Nil	Contains soya	For infants requiring additional energy, vitamins, minerals and trace elements following a protein-restricted diet.	Energivit powder: 400 gram = £25.64
Powder provides: carbohydrate 66.7 g, fat 25 g, energy 2059 kJ (492 kcal)/100 g									
Scandishake® Mix (Nutricia Ltd)	Powder per 100 g	2120 kJ (507 kcal)	4.8 g caseinates	67 g (sugars 20.5 g)	24.5 g	Nil	Contains lactose, soya.	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement.	Scandishake Mix oral powder 85g sachets: banana, caramel, chocolate, strawberry, unflavoured, vanilla 6 sachet = £16.50
Powder 85 g reconstituted with 240 mL whole milk provides: protein 12.1 g, carbohydrate 68.2 g, fat 29.6 g, energy 2460 kJ (587 kcal)									
Not suitable for use in child under 3 years									
High-energy supplements: protein									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® jelly (Nutrino Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein, whey protein isolate	Less than 1 g	Nil	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource jelly: blackcurrant, fruit punch, lime, orange 118 ml = £2.07
Not recommended for child under 3 years									
ProSource® TF (Nutrino Ltd)	Liquid (tube feed) per 100 mL	373 kJ (98 kcal)	24.4 g collagen protein, protein equivalent (amino acids)	2.2 g (sugars Nil)	Less than 1 g	Less than 1 g	Contains bovine derivatives. Gluten-free, lactose-free	Hypoproteinaemia.	ProSource TF liquid 45ml sachets: 100 sachet = £136.08
Not recommended for child under 3 years									
Protifar® (Nutricia Ltd)	Powder per 100 g	1560 kJ (368 kcal)	87.2 g milk protein	less than 1.5 g	1.6 g	Nil	Contains residual lactose, soya. Gluten-free	Hypoproteinaemia.	Protifar powder: 225 gram = £10.48
Powder 2.5 g provides: protein 2.2 g, carbohydrate less than 0.04 g, fat 0.04 g, energy 39 kJ (9 kcal)									
Not suitable for use in child under 3 years									

High-energy supplements: protein (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Renapro Shot® (Stanningley Pharma Ltd)	Liquid (sip or tube feed) per 100ml	711 kJ (167 kcal)	33 g collagen protein	4.9 g fructose (sugars 4.9 g)	less than 0.5 g	Nil	Contains beef derivatives. Gluten-free	Hypoproteinaemia.	Renapro Shot 60ml bottles: cola, peach, wild berry 30 bottle = £69.60
Not suitable for use in child under 1 year									
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free	Dialysis, hypoproteinaemia.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder 20 g reconstituted with 60-100 mL cold water provides: protein 18 g, carbohydrate 0.7 g, fat 0.2 g, energy 312 kJ (74 kcal) Not suitable for use in child under 1 year									
PROTEIN AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Lactose-free	Chronic renal failure, hypoproteinaemia, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake and haemodialysis.	Dialamine powder: 400 gram = £85.69
Powder provides: protein 25 g, carbohydrate 65 g, fat Nil, energy 1530 kJ (360 kcal)/100 g Not suitable for use in child under 6 months									
ProSource® liquid (Nutrinovo Ltd)	Liquid (sip or tube feed) per 100 mL	1400 kJ (333 kcal)	33.3 g collagen protein, whey protein isolate	50 g (sugars 26.7 g)	Less than 1 g	Less than 1 g	Contains residual lactose, porcine derivatives. Gluten-free	Biochemically proven hypoproteinaemia.	ProSource liquid 30ml sachets: citrus berry, lemon, neutral, orange creme 100 sachet = £112.03
Not recommended for child under 3 years									
ProSource® Plus (Nutrinovo Ltd)	Liquid (sip and tube feed) per 100 mL	1400 kJ (333 kcal)	50 g collagen protein, whey protein isolate	36.7 g sucrose (sugars 33.3 g)	Less than 1 g	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 50 sachet = £79.68; 100 sachet = £159.36
Not recommended for child under 3 years									
PROTEIN, FAT, AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® Extra (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1650 kJ (400 kcal)	5 g caseinates, whey protein hydrolysate	4.5 g (sugars 3.5 g)	40.3 g	Nil	Contains residual lactose. Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid restriction.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £6.00; Calogen Extra emulsion: neutral, strawberry 200 ml = £5.10
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Calshake® (Fresenius Kabi Ltd)	Standard dilution (28% w/v) of powder per 100 ml	795 kJ (190 kcal)	3.8 g milk protein	22.2 g (sugars 7 g)	9.5 g	less than 0.15 g	Contains lactose. Gluten-free. Neutral flavour not suitable for use in child under 1 year	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Calshake powder 87g sachets: banana, neutral, strawberry, vanilla 7 sachet = £19.81; Calshake powder 90g sachets chocolate: 7 sachet = £19.81
Powder provides: protein 4.3 g, carbohydrate 67.3 g, fat 24.1 g, energy 2100 kJ (500 kcal)/100 g Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enshake® (Abbott Laboratories Ltd)	Standard dilution (31.1% w/v) of powder per 100 mL	815 kJ (194 kcal)	5.2 g caseinate, milk, soya protein isolates	25.5 g 24.7 g corn syrup (sugars 7.4 g)	8 g	Nil	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £16.92
Powder provides: protein 8.4 g, carbohydrate 69.5 g, fat 15.6 g, energy 1902 kJ (452 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child under 6 years									
MCTProcal® (Vitafo International Ltd)	Powder per 100 g	2907 kJ (703 kcal)	12.2 g milk protein	20.6 g (sugars 3.1 g)	63.5 g (MCT 96%)	Nil	Contains lactose	Disorders of long chain fatty acid oxidation, fat malabsorption and other disorders requiring a low LCT, high MCT supplement.	MCTProcal oral powder 16g sachets: 30 sachet = £28.49
Not suitable for use in child under 3 years									
Pro-Cal® powder (Vitafo International Ltd)	Powder per 100 g	2764 kJ (667 kcal)	13.6 g milk protein	28.2 g (sugars 16 g)	55.5 g	Nil	Contains lactose. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement (with protein).	powder: 12500 gram = £254.89; 510 gram = £17.59; 1500 gram = £35.85; Pro-Cal powder: starter pack 8 sachet = £5.99; 15g sachets 30 sachet = £22.61; 200 sachet = £84.65
Powder 15 g reconstituted with 100 ml water provides: protein 2 g, carbohydrate 4.2 g, fat 8.3 g, energy 415 kJ (100 kcal) Not suitable for use in child under 3 years									
Pro-Cal® Shot (Vitafo International Ltd)	Liquid (sip feed) per 100 mL	1385 kJ (334 kcal)	6.7 g caseinates, milk proteins	13.4 g lactose (sugars 13.3 g)	28.2 g	Nil	Contains lactose, soya. Gluten- free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement (with protein).	Pro-Cal: shot banana, neutral, strawberry 720 ml = £16.67; shot starter pack 360 ml = £8.33
Not suitable for use in child under 3 years									
Fibre, vitamin, and mineral supplements									
High-fibre supplements									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
HyFiber® (Nutrinovo Ltd)	Liquid (sip or tube feed) per 100 mL	484 kJ (119 kcal)	Nil	10.4 g (sugars 10.4 g)	Nil	39 g	Gluten-free, lactose-free	Bowel transit disorder in tube fed patients.	HyFiber: liquid 30ml sachets 100 sachet = £85.46; liquid 887 ml = £25.00
Not recommended for child under 3 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Optifibre® (Nestle Health Science)	Powder per 100 g	816 kJ (202 kcal)	less than 1.5 g	6 g partially hydrolysed guar gum (sugars 6 g)	Nil	86 g	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1192 except dysphagia.	Optifibre: powder 5g sachets 16 sachet = £4.60; powder 250 gram = £11.34
Not suitable for use in child under 5 years									
Vitamin and Mineral supplements									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
DEKAs® Essential (Alveolus Biomedical B.V.)	Solid per 100 g	2642 kJ (631 kcal)	Nil	50 g	49 g	Nil	Contains fish gelatin	Cystic fibrosis.	DEKAs Essential capsules: 60 capsule = £37.17
Not suitable for child under 4 years; not recommended for child over 10 years									
DEKAs® Plus chewable tablets (Alveolus Biomedical B.V.)	Solid per 100 g	1577 kJ (377 kcal)	2.5 g	88 g (sugars 70 g)	1.8 g	Nil		Cystic fibrosis.	DEKAs Plus chewable tablets: 60 tablet = £43.34
Not suitable for use in child under 4 years.									
DEKAs® Plus liquid (Alveolus Biomedical B.V.)	Liquid per 100 mL	400 kJ (100 kcal)	2 g	22 g	Nil	Nil		Cystic fibrosis.	DEKAs Plus liquid: 60 ml = £33.84
Not recommended for child over 3 years									
DEKAs® Plus softgels capsules (Alveolus Biomedical B.V.)	Solid per 100 g	2090 kJ (500 kcal)	25 g	22 g (sugars less than 1 g)	43 g	Nil	Contains bovine derivatives, soya	Cystic fibrosis.	DEKAs Plus softgels capsules: 60 capsule = £43.34
Not suitable for use in child under 10 years									
FruitiVits® (Vitafo International Ltd)	Powder per 100 g	168 kJ (40 kcal)	Nil	8.3 g (sugars 0.5 g)	Nil	3.3 g		Restrictive therapeutic diets.	FruitiVits oral powder 6g sachets: 30 sachet = £77.09
Powder 6 g reconstituted with 60 ml water provides: protein nil, carbohydrate 0.5 g, fat nil, energy 10 kJ (2.4 kcal) Not suitable for child under 3 years of age; not recommended for child over 10 years									
Paediatric Seravit® (Nutricia Ltd)	Powder per 100 g	1246 kJ (293 kcal)	Nil	75 g (sugars 5.9 g)	Nil	Nil	Pineapple flavour not suitable for use in child under 3 years	Vitamin and mineral supplement in restrictive therapeutic diets.	Seravit Paediatric powder: unflavoured 200 gram = £20.88; pineapple 200 gram = £22.26
Powder 15 g reconstituted with 75 ml water provides: protein nil, carbohydrate 11.3 g, fat nil, energy 187 kJ (44 kcal)									

Feed additives

Special additives for conditions of intolerance

Care[®] Co-Lactase

- ▶ For transient lactase deficiency.

LIQUID, contains glycerin, lactase, water.

Care Co-Lactase infant drops (Thornton & Ross Ltd)
10 ml (ACBS) · NHS indicative price = £5.58

Colief[®]

- ▶ For Transient Lactase Deficiency.

LIQUID, contains glycerol, lactase, water.

Colief 50,000units/g infant drops (Crosscare Ltd)
7 ml (ACBS) · NHS indicative price = £8.40

Glucose liquid

- ▶ For use as an energy supplement in sucrose-isomaltase deficiency.

LIQUID, contains syrups, hydrolysed starch, sulphur dioxide.

Glucose liquid (J M Loveridge Ltd)

280 gram (ACBS) · No NHS indicative price available | 500 gram (ACBS) · NHS indicative price = £4.39

Glucose powder

- ▶ For use as an energy supplement in sucrose-isomaltase deficiency.

POWDER, contains dextrose monohydrate.

Glucose powder for oral use BP 1980 (Thornton & Ross Ltd)

500 gram (ACBS) · NHS indicative price = £1.75 · Drug Tariff (Part VIII A Category C) price = £1.75

Feed thickeners and pre-thickened drinks

Instant Carobel[®]

- ▶ For thickening of liquids or foods in the treatment of vomiting.

POWDER, contains residual lactose.

Instant Carobel powder (Nutricia Ltd)
135 gram (ACBS) · NHS indicative price = £3.19

Multi-thick[®]

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified maize starch (sulphur dioxide and sulphites), residual lactose. Gluten-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

Nutilis[®] Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains guar gum, maltodextrin, xanthan gum.

Gluten-free, lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

Nutilis Clear powder 1.25g sachets (Nutricia Ltd)

50 sachet (ACBS) · NHS indicative price = £11.65

Nutilis[®] Powder

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.

POWDER, gluten-free and lactose-free.

Nutilis powder (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £6.03

Osmosip[®] Clear and Thick Instant Thickener

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, xanthan gum. Gluten-free.

Osmosip Clear & Thick Instant Thickener powder (Spectral Pharmaceuticals Ltd)

133 gram (ACBS) · NHS indicative price = £3.95

Resource[®] ThickenUp[®]

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified food starch (maize).

Resource ThickenUp powder 4.5g sachets (Nestle Health Science)

75 sachet (ACBS) · NHS indicative price = £18.49

Resource ThickenUp powder (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.66

Resource[®] ThickenUp[®] Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, residual lactose (tin only), xanthan gum. Gluten-free.

Resource ThickenUp Clear powder (Nestle Health Science)

127 gram (ACBS) · NHS indicative price = £8.46

Resource ThickenUp Clear powder 1.2g sachets (Nestle Health Science)

24 sachet (ACBS) · NHS indicative price = £5.28

SLO Drinks[®]

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

Swalloweze[®] Clear Instant Food & Fluid Thickener

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains erythritol (E968), maltodextrin, xanthan gum (E415). Gluten-free, lactose-free.

Swalloweze Clear Instant Food & Fluid Thickener powder (Nutraltra Ltd)

165 gram (ACBS) · NHS indicative price = £5.50

Swalloweze Clear Instant Food & Fluid Thickener powder 1.6g sachets (Nutraltra Ltd)

48 sachet (ACBS) · NHS indicative price = £9.60

Thick and Easy[®] Clear

- ▶ For thickening of liquids or foods in dysphagia, and for the dietary management of conditions such as stroke, Parkinson's disease, muscular dystrophy, motor neurone disease, multiple sclerosis, malignancies of the oral cavity and throat, neurological disorders caused by injury or disease. Not suitable for use in child under 3 years.

POWDER, gluten-free, lactose-free.

Thick & Easy Clear powder (Fresenius Kabi Ltd)

126 gram (ACBS) · NHS indicative price = £6.50

Thick & Easy Clear powder 1.4g sachets (Fresenius Kabi Ltd)

100 sachet (ACBS) · NHS indicative price = £24.00

Thick and Easy[®] Original

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin, modified maize starch (E1442). Gluten-free, lactose-free.

Thick & Easy Original powder (Fresenius Kabi Ltd)

225 gram (ACBS) · NHS indicative price = £5.57 | 4540 gram (ACBS) · NHS indicative price = £104.20

Thixo-D[®] Original

- ▶ For thickening of liquids or foods in dysphagia. Not recommended for child under 1 year.

POWDER, contains modified maize starch. Gluten-free, lactose-free.

Thixo-D Original powder (Ecogreen Technologies Ltd)

375 gram (ACBS) · NHS indicative price = £8.10

Flavouring preparations

FlavourPac®

- ▶ For use with Vitafo's inborn error range of protein substitutes. Not suitable for use in child under 3 years.

POWDER

FlavourPac oral powder 4g sachets blackcurrant (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

FlavourPac oral powder 4g sachets orange (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

FlavourPac oral powder 4g sachets raspberry (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

FlavourPac oral powder 4g sachets tropical (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

Nutricia Flavour Modjul®

- ▶ For use with a range of unflavoured amino acid and peptide based foods for special medical purposes. Not suitable for use in child under 6 months.

POWDER

Nutricia Flavour Modjul powder blackcurrant (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

Nutricia Flavour Modjul powder orange (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

Nutricia Flavour Modjul powder pineapple (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

Foods for special diets

Gluten-free foods

ACBS indications: established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

Bread

LOAVES

Barkat® Loaves

GLUTEN-FREE

Barkat gluten free par baked white bread sliced (Gluten Free Foods Ltd)

300 gram (ACBS) · NHS indicative price = £4.21

Nutritional supplements for metabolic diseases

Glutaric aciduria (type 1)

GA amino^s

- Nutritional supplement for the dietary management of glutaric aciduria type 1 (GA1).

POWDER, protein equivalent 83 g, carbohydrate Nil, fat Nil, energy 1411 kJ (332 kcal)/100 g

GA amino^s oral powder 6g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £121.13

GA explores^e

- Nutritional supplement for the dietary management of glutaric aciduria type 1. Not suitable for use in child under 6 months; not suitable for child over 5 years. Includes added vitamins A, B, C, D, E and K.

POWDERprotein equivalent 40 g, carbohydrate 42 g, fat 1.5 g, energy 1450 kJ (342 kcal)/100 g.

GA explore^s oral powder 12.5g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £135.38

GA gel^e

- Nutritional supplement for dietary management of type 1 glutaric aciduria. Not suitable for use in child under 6 months; not recommended for child over 10 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 41.7 g, carbohydrate 42.9 g, fat 0.1 g, energy 1440 kJ (339 kcal)/100 g.

GA gel oral powder 24g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £255.08

GA1 Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven glutaric aciduria type 1. Not recommended for child over 5 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 13.1 g, carbohydrate 50.1 g, fat 23 g, fibre 3.7 g, energy 1950 kJ (466 kcal)/100 g.

GA1 Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £44.22

XLVS TRY Glutaridon®

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria.

POWDER, protein 79 g, carbohydrate 4 g, fat Nil, energy 1411 kJ (332 kcal)/100 g.

XLVS TRY Glutaridon powder (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £217.07

Glycogen storage disease

Glycosade®

- ▶ Nutritional supplement for the dietary management of hepatic Glycogen Storage Disease. Not suitable for use in child under 2 years.

POWDER, protein Nil, carbohydrate 88 g, fat Nil, energy 1496 kJ (352 kcal)/60 g

Glycosade oral powder 60g sachets lemon (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £133.99

Glycosade oral powder 60g sachets unflavoured (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £133.99

Homocystinuria or hypermethioninaemia

HCU Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia. Not recommended for child over 3 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent (essential and non-essential amino acids) 13.1 g, carbohydrate 50.1 g, fat 23 g, energy 1950 kJ (466 kcal)/100 g.

HCU Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £44.22

HCU Anamix® Junior

- ▶ Nutritional supplement for the dietary management of homocystinuria. Not suitable for use in child under 1 year. Not suitable for use in child over 10 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 28 g, carbohydrate 32 g, fat 12.5 g, energy 1572 kJ (375 kcal)/100 g.

HCU Anamix Junior oral powder 36g sachets (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £274.80

HCU cooler®

- ▶ Nutritional supplement for the dietary management of homocystinuria. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

327 gram (ACBS) · NHS indicative price = £36.33

PKU Maxamum®

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 39 g, carbohydrate 34 g, fat less than 0.5 g, energy 1260 kJ (297 kcal)/100 g.

PKU Maxamum oral powder 50g sachets orange (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £304.50

PKU Maxamum oral powder 50g sachets unflavoured (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £304.50

PKU Maxamum powder orange (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £101.57

PKU Maxamum powder unflavoured (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £101.57

PKU Sphere®

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 4 years. Includes added vitamins A, B, C, D, E, K.

POWDER, protein 56 g, carbohydrate 18 g, fat 4.7 g, energy 1432 kJ (338 kcal)/100 g.

PKU sphere15 oral powder 27g sachets chocolate (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £269.29

PKU sphere15 oral powder 27g sachets red berry (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £269.29

PKU sphere15 oral powder 27g sachets vanilla (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £269.29

PKU sphere20 oral powder 35g sachets chocolate (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £373.41

PKU sphere20 oral powder 35g sachets red berry (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £373.41

PKU sphere20 oral powder 35g sachets vanilla (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £373.41

PKU squeeze®

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 6 months; not recommended for child over 10 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 12 g, carbohydrate 26 g, fat 0.6 g, energy 668 kJ (157 kcal)/100 g.

PKU squeeze liquid 85g pouches (Vitafo International Ltd)

30 pouch (ACBS) · NHS indicative price = £158.81

PKU start®

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 14.3 g, carbohydrate 51 g, fat 25 g, energy 2035 kJ (486 kcal)/100 g.

PKU start powder (Vitafo International Ltd)

400 gram (ACBS) · NHS indicative price = £42.71

PKU Synergy®

- ▶ Nutritional supplement for the dietary management of phenylketonuria and hyperphenylalaninaemia. Not suitable for use in child under 10 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 60.6 g, carbohydrate 10.7 g, fat 1 g, energy 1238 kJ (296 kcal)/100 g.

PKU Synergy oral powder 33g sachets (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £350.40

XPhe jump®

- ▶ Nutritional supplement for the dietary management of phenylketonuria (PKU) or hyperphenylalaninemia (HPA). Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 16 g, carbohydrate 6 g, fat less than 0.1 g, energy 376 kJ (89 kcal)/100 mL.

XPhe jump 10 liquid cola (metaX Institut fuer Diabetik GmbH)

63 ml (ACBS) · NHS indicative price = £4.27

XPhe jump 10 liquid neutral (metaX Institut fuer Diabetik GmbH)

63 ml (ACBS) · NHS indicative price = £4.27

XPhe jump 10 liquid wild berries (metaX Institut fuer Diabetik GmbH)

63 ml (ACBS) · NHS indicative price = £4.27

XPhe jump 20 liquid cola (metaX Institut fuer Diabetik GmbH)

125 ml (ACBS) · NHS indicative price = £8.53

XPhe jump 20 liquid neutral (metaX Institut fuer Diäetetik GmbH)
125 ml (ACBS) · NHS indicative price = £8.53

XPhe jump 20 liquid orange (metaX Institut fuer Diäetetik GmbH)
125 ml (ACBS) · NHS indicative price = £8.53

XPhe jump 20 liquid tropical (metaX Institut fuer Diäetetik GmbH)
125 ml (ACBS) · NHS indicative price = £8.53

XPhe jump 20 liquid vanilla (metaX Institut fuer Diäetetik GmbH)
125 ml (ACBS) · NHS indicative price = £8.53

XPhe jump 20 liquid wild berries (metaX Institut fuer Diäetetik GmbH)
125 ml (ACBS) · NHS indicative price = £8.53

Tyrosinaemia

TYR Anamix[®] Infant

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia when plasma methionine is normal. Not suitable for use in child over 3 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 13.1 g, carbohydrate 50.1 g, fat 23 g, energy 1950 kJ (466 kcal)/100 g.

TYR Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £44.22

TYR Anamix[®] Infant methionine free

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia type 1. Not suitable for use in child over 3 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 13.1 g, carbohydrate 50.1 g, fat 23 g, energy 1950 kJ (466 kcal)/100 g.

TYR Anamix Infant methionine free powder (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £44.22

TYR Anamix[®] Junior

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia. Not suitable for use in child under 1 year; not recommended for child over 10 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 28 g, carbohydrate 32 g, fat 12.5 g, energy 1572 kJ (375 kcal)/100 g.

TYR Anamix Junior oral powder 36g sachets (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £240.90

TYR Anamix[®] Junior LQ

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 699), type II, and type III. Not suitable for use in child under 1 year. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein 8 g, carbohydrate 7 g, fat 3.8 g, energy 398 kJ (95 kcal)/100 mL.

TYR Anamix Junior LQ liquid (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £10.52

TYR Cooler[®]

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

TYR orange cooler15 liquid (Vitafo International Ltd)

130 ml (ACBS) · NHS indicative price = £13.46

TYR red cooler10 liquid (Vitafo International Ltd)

87 ml (ACBS) · NHS indicative price = £8.29

TYR red cooler15 liquid (Vitafo International Ltd)

130 ml (ACBS) · NHS indicative price = £13.46

TYR red cooler20 liquid (Vitafo International Ltd)

174 ml (ACBS) · NHS indicative price = £17.33

PKU GoLike Plus 3-16[®]

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years; not recommended for child over 16 years. Includes added vitamins A, B, C, D, E and K.

GRANULES, protein equivalent 62.2 g, carbohydrate 4.3 g, fat nil, energy 1187 kJ (280 kcal)/100 g.

PKU GoLike Plus 3-16 oral powder 24g sachets (APR Applied Pharma Research SA)

30 sachet (ACBS) · NHS indicative price = £247.50

TYR explore[®] 5

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 6 months or over 5 years. Contains added vitamins A, B, C, D, E and K.

POWDER, protein 40g, carbohydrate 42g, fat 1.5g, energy 1450 kJ (342 kcal)/100g.

TYR explore5 oral powder 12.5g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £135.38

TYR express[®]

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 60 g, carbohydrate 13.7 g, fat 0.2 g, energy 1260 kJ (297 kcal)/100 g.

TYR express15 oral powder 25g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £396.12

TYR express20 oral powder 34g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £511.78

TYR Gel[®]

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 1 year; not recommended for child over 10 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 41.7 g, carbohydrate 42.9 g, fat 0.1 g, energy 1440 kJ (339 kcal)/100 g.

TYR gel oral powder 24g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £255.02

TYR Lophlex[®]

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years.

POWDER, protein 71.4 g, carbohydrate 13.7 g, fat 1.5 g, energy 1488 kJ (350 kcal)/100 g.

TYR Lophlex powder 28g sachets (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £503.22

TYR Lophlex[®] LQ

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein 16 g, carbohydrate 7 g, fat 0.35 g, energy 407 kJ (96 kcal)/100 mL

TYR Lophlex LQ 10 liquid (Nutricia Ltd)

62.5 ml (ACBS) · NHS indicative price = £9.06

TYR Lophlex LQ 20 liquid (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £18.70

TYR sphere[®] 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years.

POWDER, protein 56 g, carbohydrate 18 g, fat 4.7 g, energy 1432 kJ (338 kcal)/100 g.

TYR sphere20 oral powder 35g sachets (Vitafo International Ltd)

30 sachet (ACBS) · NHS indicative price = £550.92

XPHEN TYR Tyrosidon[®] Free AA Mix

- ▶ Nutritional supplement for the dietary management of tyrosinaemia where plasma methionine levels are normal.

POWDER, protein 77 g, carbohydrate 4.5 g, fat Nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £217.07

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. The advice in patient information leaflets may be less appropriate when the medicine is for a child, particularly for unlicensed medicines or indications. Pharmacists should explain discrepancies to carers, if necessary. The patient information leaflet should only be withheld in exceptional circumstances because it contains other information that should be provided. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard.... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF for Children these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid

preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF for Children apply to medicines dispensed against a prescription. Children and carers should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF for Children does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF for Children will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF for Children 2011–2012, a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–50, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF for Children and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 Warning: This medicine may make you sleepy

Rhybudd: Gall y feddygiaeth hon eich gwneud yn gysglyd To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Gall y feddygiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrro, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time

and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysgld. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**

Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthydd am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd.

Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfapyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

Gadewch i ddatodi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders,

granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**
Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg
 To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).
- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**
Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.
- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**
Rhowch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**
Peidiwch â chymryd mwy na... mewn 24 awr
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**
Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**
Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night*.
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**
Cymerwch gyda neu ar ôl bwyd
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*. Patients should be advised that a *small amount of food is sufficient*.
- 22 Take 30 to 60 minutes before food**
Cymerwch 30 i 60 munud cyn bwyd
 To be used on some preparations *whose absorption is thereby improved*.
 Most oral antibacterials require label 23 instead (see below).

- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**

Cymerwch y feddyginiaeth ar y stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.

- 24 Suck or chew this medicine**

Bydd angen cnoi neu sugno'r feddyginiaeth hon
 To be used on *preparations that should be sucked or chewed*. The pharmacist should use discretion as to which of these words is appropriate.

- 25 Swallow this medicine whole. Do not chew or crush**

Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
 To be used on *preparations that are enteric-coated or designed for modified-release*.

Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.

Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.

- 26 Dissolve this medicine under your tongue**

Gadewch i'r feddyginiaeth hon doddî o dan y tafod
 To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.

- 27 Take with a full glass of water**

Cymerwch gyda llond gwydr o ddŵr
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose)*. The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.

- 28 Spread thinly on the affected skin only**

Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).

- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**

Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.

This label has been introduced because of the serious consequences of overdosage with paracetamol.

- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**

Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
 To be used on all containers of dispensed *preparations containing paracetamol*.

- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**

Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred. Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
 Aciclovir Oral Suspension, BP, 200 mg/5 mL
 Aciclovir Tablets, BP, 200 mg
 Aciclovir Tablets, BP, 800 mg
 Amoxicillin Capsules, BP
 Amoxicillin Oral Powder, DPF
 Amoxicillin Oral Suspension, BP
 Artificial Saliva Gel, DPF
 Artificial Saliva Oral Spray, DPF
 Artificial Saliva Pastilles, DPF
 Artificial Saliva Protective Spray, DPF
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
BioXtra[®] Gel Mouthspray
BioXtra[®] Moisturising Gel
Glandosane[®]
Saliveze[®]
 Artificial Saliva Substitute Spray, DPF
 Aspirin Tablets, Dispersible, BP
 Azithromycin Capsules, 250 mg, DPF
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF
 Azithromycin Tablets, 250 mg, DPF
 Azithromycin Tablets, 500 mg, DPF
 Beclometasone Pressurised Inhalation, BP,
 50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite[®]
 Benzylamine Mouthwash, BP 0.15%
 Benzylamine Oromucosal Spray, BP 0.15%
 Betamethasone Soluble Tablets, 500 micrograms, DPF
 Carbamazepine Tablets, BP
 Cefalexin Capsules, BP
 Cefalexin Oral Suspension, BP
 Cefalexin Tablets, BP
 Cefradine Capsules, BP
 Cetirizine Oral Solution, BP, 5 mg/5 mL
 Cetirizine Tablets, BP, 10 mg
 Chlorhexidine Gluconate Gel, BP
 Chlorhexidine Mouthwash, BP
 Chlorhexidine Oral Spray, DPF
 Chlorphenamine Oral Solution, BP
 Chlorphenamine Tablets, BP
 Choline Salicylate Dental Gel, BP
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
 Clarithromycin Tablets, BP
 Clindamycin Capsules, BP
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
 Diazepam Oral Solution, BP, 2 mg/5 mL
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP
 Dihydrocodeine Tablets, BP, 30 mg
 Doxycycline Tablets, Dispersible, BP
 Doxycycline Capsules, BP, 100 mg
 Doxycycline Tablets, 20 mg, DPF
 Ephedrine Nasal Drops, BP
 Erythromycin Ethyl Succinate Oral Suspension, BP
 Erythromycin Ethyl Succinate Tablets, BP
 Erythromycin Stearate Tablets, BP
 Erythromycin Tablets, Gastro-resistant, BP
 Fluconazole Capsules, 50 mg, DPF
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF
 Hydrocortisone Cream, BP, 1%
 Hydrocortisone Oromucosal Tablets, BP
 Hydrogen Peroxide Mouthwash, BP, 6%
 Ibuprofen Oral Suspension, BP, sugar-free
 Ibuprofen Tablets, BP
 Lansoprazole Capsules, Gastro-resistant, BP
 Lidocaine Ointment, BP, 5%
 Lidocaine Spray 10%, DPF
 Loratadine Syrup, 5 mg/5 mL, DPF
 Loratadine Tablets, BP, 10 mg
 Menthol and Eucalyptus Inhalation, BP 1980
 Metronidazole Oral Suspension, BP
 Metronidazole Tablets, BP
 Miconazole Cream, BP
 Miconazole Oromucosal Gel, BP
 Miconazole and Hydrocortisone Cream, BP
 Miconazole and Hydrocortisone Ointment, BP
 Nystatin Oral Suspension, BP
 Omeprazole Capsules, Gastro-resistant, BP
 Oxytetracycline Tablets, BP
 Paracetamol Oral Suspension, BP
 Paracetamol Tablets, BP
 Paracetamol Tablets, Soluble, BP
 Phenoxymethylpenicillin Oral Solution, BP
 Phenoxymethylpenicillin Tablets, BP
 Promethazine Hydrochloride Tablets, BP
 Promethazine Oral Solution, BP
 Saliva Stimulating Tablets, DPF
 Sodium Chloride Mouthwash, Compound, BP
 Sodium Fluoride Mouthwash, BP
 Sodium Fluoride Oral Drops, BP
 Sodium Fluoride Tablets, BP
 Sodium Fluoride Toothpaste 0.619%, DPF
 Sodium Fluoride Toothpaste 1.1%, DPF
 Sodium Fusidate Ointment, BP
 Temazepam Oral Solution, BP
 Temazepam Tablets, BP
 Tetracycline Tablets, BP
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray

(proprietary product: *Aequasyl*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules

azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL

azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets

azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms

betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL

clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL

clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg

fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL

loratadine 5 mg/5 mL

Saliva Stimulating Tablets

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF)

Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

This list is for reference only; see the BNF for full prescribing information.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

- Almond Oil Ear Drops, BP
- Arachis Oil Enema, NPF
- Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)
- Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)
- Bisacodyl Tablets, BP
- Catheter Maintenance Solution, Sodium Chloride, NPF
- Catheter Maintenance Solution, 'Solution G', NPF
- Catheter Maintenance Solution, 'Solution R', NPF
- Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%
- Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%
- Choline Salicylate Dental Gel, BP
- Clotrimazole Cream 1%, BP
- Co-danthramer Capsules, NPF
- Co-danthramer Capsules, Strong, NPF
- Co-danthramer Oral Suspension, NPF
- Co-danthramer Oral Suspension, Strong, NPF
- Co-danthrusate Capsules, BP
- Co-danthrusate Oral Suspension, NPF
- Crotafaminon Cream, BP
- Crotafaminon Lotion, BP
- Dimeticone barrier creams containing at least 10%
- Dimeticone Lotion, NPF
- Docusate Capsules, BP
- Docusate Enema, NPF
- Docusate Oral Solution, BP
- Docusate Oral Solution, Paediatric, BP
- Econazole Cream 1%, BP
- Emollients as listed below:
 - ▶ Aquadrate[®] 10% w/w Cream
 - ▶ Arachis Oil, BP
 - ▶ Balneum[®] Plus Cream
 - ▶ Cetragen[®] Emollient Cream
 - ▶ Dermamist[®]
 - ▶ Diprobace[®] Cream
 - ▶ Diprobace[®] Ointment
 - ▶ Doublebase[®]
 - ▶ Doublebase[®] Dayleve Gel
 - ▶ E45[®] Cream
 - ▶ E45[®] Itch Relief Cream
 - ▶ Emulsifying Ointment, BP
 - ▶ Eucerin[®] Intensive 10% w/w Urea Treatment Cream
 - ▶ Eucerin[®] Intensive 10% w/w Urea Treatment Lotion
 - ▶ Hydromol[®] Cream
 - ▶ Hydromol[®] Intensive
 - ▶ Hydrour Ointment, BP
 - ▶ Lipobase[®]
 - ▶ Liquid and White Soft Paraffin Ointment, NPF
 - ▶ Neutrogena[®] Norwegian Formula Dermatological Cream
 - ▶ Nutraplus[®] Cream
 - ▶ Oilatum[®] Cream
 - ▶ Oilatum[®] Junior Cream
 - ▶ Paraffin, White Soft, BP
 - ▶ Paraffin, Yellow Soft, BP
 - ▶ Ultrabase[®]
 - ▶ Unguentum M[®]
- Emollient bath and shower preparations as listed below:
 - ▶ Aqueous Cream, BP
 - ▶ Balneum[®] (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 - ▶ Balneum Plus[®] Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 - ▶ Cetragen[®] Emollient Bath Additive
 - ▶ Dermalol[®] Bath Emollient
 - ▶ Doublebase[®] Emollient Bath Additive
 - ▶ Doublebase[®] Emollient Shower Gel
 - ▶ Doublebase[®] Emollient Wash Gel
 - ▶ Hydromol[®] Bath and Shower Emollient
 - ▶ Oilatum[®] Emollient
 - ▶ Oilatum[®] Gel
 - ▶ Oilatum[®] Junior Bath Additive
 - ▶ Zerolatum[®] Emollient Medicinal Bath Oil
- Folic Acid Tablets 400 micrograms, BP
- Glycerol Suppositories, BP
- Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)
- Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)
- Ispaghula Husk Granules, BP
- Ispaghula Husk Granules, Effervescent, BP
- Ispaghula Husk Oral Powder, BP
- Lactulose Solution, BP
- Lidocaine Ointment, BP
- Lidocaine and Chlorhexidine Gel, BP
- Macrogol Oral Liquid, Compound, NPF
- Macrogol Oral Powder, Compound, NPF
- Macrogol Oral Powder, Compound, Half-strength, NPF
- Magnesium Hydroxide Mixture, BP
- Magnesium Sulfate Paste, BP
- Malathion aqueous lotions containing at least 0.5%
- Mebendazole Oral Suspension, NPF
- Mebendazole Tablets, NPF
- Methylcellulose Tablets, BP [discontinued]
- Miconazole Cream 2%, BP
- Miconazole Oromucosal Gel, BP

- Mouthwash Solution-tablets, NPF
- Nicotine Inhalation Cartridge for Oromucosal Use, NPF
- Nicotine Lozenge, NPF
- Nicotine Medicated Chewing Gum, NPF
- Nicotine Nasal Spray, NPF
- Nicotine Oral Spray, NPF
- Nicotine Sublingual Tablets, NPF
- Nicotine Transdermal Patches, NPF
- Nystatin Oral Suspension, BP
- Olive Oil Ear Drops, BP
- Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)
- Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)
- Paracetamol Tablets, Soluble, BP (max. 96 tablets; max. pack size 32 tablets)
- Permethrin Cream, NPF
- Phosphates Enema, BP
- Povidone–Iodine Solution, BP
- Senna Oral Solution, NPF
- Senna Tablets, BP
- Senna and Ispaghula Granules, NPF
- Sodium Chloride Solution, Sterile, BP
- Sodium Citrate Compound Enema, NPF
- Sodium Picosulfate Capsules, NPF
- Sodium Picosulfate Elixir, NPF
- Spermicidal contraceptives as listed below:
 - ▶ Gygel[®] Contraceptive Jelly
- Sterculia Granules, NPF
- Sterculia and Frangula Granules, NPF
- Titanium Ointment, BP
- Water for Injections, BP
- Zinc and Castor Oil Ointment, BP
- Zinc Oxide and Dimeticone Spray, NPF
- Zinc Oxide Impregnated Medicated Bandage, NPF
- Zinc Oxide Impregnated Medicated Stocking, NPF
- Zinc Paste Bandage, BP 1993
- Zinc Paste and Ichthammol Bandage, BP 1993

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff

Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm

Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

- **Arachis oil enema**
 - ▶ arachis oil 100%
- **Catheter maintenance solution, sodium chloride**
 - ▶ (proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%
- **Catheter maintenance solution, 'Solution G'**
 - ▶ (proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%
- **Catheter maintenance solution, 'Solution R'**
 - ▶ (proprietary products: *OptiFlo R*; *Uro-Tainer Solutio R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%
- **Chlorhexidine gluconate alcoholic solutions**
 - ▶ (proprietary products: *ChlorPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution
- **Chlorhexidine gluconate aqueous solutions**
 - ▶ (proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution
- **Co-danthramer capsules** POM
 - ▶ co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)
- **Co-danthramer capsules, strong** POM
 - ▶ co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)
- **Co-danthramer oral suspension** POM
 - ▶ co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)
- **Co-danthramer oral suspension, strong** POM
 - ▶ co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)
- **Co-danthrusate oral suspension** POM
 - ▶ (proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)
- **Dimeticone barrier creams**
 - ▶ (proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%
- **Dimeticone lotion**
 - ▶ (proprietary product: *Hedrin*), dimeticone 4%
- **Docusate enema**
 - ▶ (proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g
- **Liquid and white soft paraffin ointment**
 - ▶ liquid paraffin 50%, white soft paraffin 50%
- **Macrogol oral liquid, compound**
 - ▶ (proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL
- **Macrogol oral powder, compound**
 - ▶ (proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*[®] as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K⁺ 5.4 mmol/litre)
- **Macrogol oral powder, compound, half-strength**
 - ▶ (proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate

- 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
- **Malathion aqueous lotions**
 - ▶ (proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis
 - **Mebendazole oral suspension** PoM
 - ▶ (proprietary product: *Vermox*), mebendazole 100 mg/5 mL
 - **Mebendazole tablets** PoM
 - ▶ (proprietary products: *Ovex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)
 - **Mouthwash solution-tablets**
 - ▶ consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash
 - **Nicotine inhalation cartridge for oromucosal use**
 - ▶ (proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))
 - **Nicotine lozenge**
 - ▶ nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)
 - **Nicotine medicated chewing gum**
 - ▶ (proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg
 - **Nicotine nasal spray**
 - ▶ (proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray
 - **Nicotine oral spray**
 - ▶ (proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray
 - **Nicotine sublingual tablets**
 - ▶ (proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))
 - **Nicotine transdermal patches**
 - ▶ releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)
 - **Permethrin cream**
 - ▶ (proprietary product: *Lyclear Dermal Cream*), permethrin 5%
 - **Senna oral solution**
 - ▶ (proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL
 - **Senna and ispaghula granules**
 - ▶ (proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%
 - **Sodium citrate compound enema**
 - ▶ (proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant
 - **Sodium picosulfate capsules**
 - ▶ (proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg
 - **Sodium picosulfate elixir**
 - ▶ (proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL
 - **Sterculia granules**
 - ▶ (proprietary product: *Normacol Granules*), sterculia 62%
 - **Sterculia and frangula granules**
 - ▶ (proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%
 - **Zinc oxide and dimeticone spray**
 - ▶ (proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit
 - **Zinc oxide impregnated medicated bandage**
 - ▶ (proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%
 - **Zinc oxide impregnated medicated stocking**
 - ▶ (proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 309, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1247 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 309, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 315, transdermal fentanyl p. 311 and oral diazepam p. 249, dihydrocodeine tartrate p. 310, lorazepam p. 250, oxycodone hydrochloride p. 317 or temazepam p. 932.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at www.gov.uk/government/publications/human-and-veterinary-medicines-register-of-licensed-manufacturing-sites.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsmuk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1242

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
 1 centimetre (cm) = 10 mm
 1 inch (in) = 25.4 mm
 1 foot (ft) = 12 inches
 12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
 1 gram (g) = 1000 milligrams (mg)
 1 milligram (mg) = 1000 micrograms
 1 microgram = 1000 nanograms
 1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
 1 millilitre (1 mL) = 1000 microlitres
 1 pint = 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
 1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
 1 megajoule (MJ) = 238.8 kilocalories (kcal)
 1 millimetre of mercury (mmHg) = 133.5 pascals (Pa)
 1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and sex

The table below shows the **mean values** for weight, height and sex by age; these values have been derived from the UK-WHO growth charts 2009 and UK 1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of actual measurements. However, the child's actual weight and height might vary considerably from the values in the table and it is important to see the child to ensure that the value chosen is appropriate. In most cases the child's actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

Latin abbreviations

Directions should be in English without abbreviation.

However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t. i. d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol

Body Surface Area in Children

Medical emergencies in the community

13-Oct-2021

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the child's condition requires investigation and further treatment, the child should be transferred to hospital promptly.

Airways disease, obstructive

▶ **ASTHMA: ACUTE**

[EvGr] Emergency asthma consultations should be regarded as being for severe acute asthma until shown otherwise.

Children with features of severe or life-threatening acute asthma, and children who fail to respond adequately at any time should be referred to hospital immediately. Acute asthma in children aged under 2 years should be managed in hospital. **⚠**

High-flow oxygen should be given if available (via tight-fitting face mask in children) to achieve and maintain an SpO₂ level of 94–98%.

▶ **EITHER Salbutamol aerosol inhaler p. 170**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER (AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR Salbutamol nebuliser solution (1 mg/mL, 2 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ **OR Terbutaline sulfate nebuliser solution p. 172 (2.5 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER Prednisolone tablets p. 508 (or prednisolone soluble tablets) (5 mg)**

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ **OR Hydrocortisone p. 506 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 167

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary

▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary

▶ **CROUP**

Dexamethasone oral solution p. 504 (2 mg/5 mL)

BY MOUTH

▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 149 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

▶ Child up to 6 months: 100–150 micrograms (0.1–0.15 mL), repeated after 5 minutes if necessary

▶ Child 6 months–5 years: 150 micrograms (0.15 mL), repeated after 5 minutes if necessary

▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary

▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal

If life-threatening features persist, further doses of intramuscular adrenaline/epinephrine can be given every 5 minutes until specialist critical care available.

High-flow oxygen should be given as soon as available. For guidance on other treatment that may be used for the management of anaphylaxis, see Antihistamines, allergen immunotherapy and allergic emergencies p. 186.

Bacterial disease

▶ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 386 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

▶ Neonate: 300 mg

▶ Child 1 month–11 months: 300 mg

▶ Child 1–9 years: 600 mg

▶ Child 10–17 years: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ **OR if history of allergy to penicillin**

Cefotaxime injection p. 364 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

▶ Neonate: 50 mg/kg

▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)

▶ Child 12–17 years: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 407 (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child 1 month–17 years: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 340.

Hypoglycaemia

- ▶ **DIABETIC HYPOGLYCAEMIA**

Fast-acting carbohydrate (glucose p. 674 is preferred)

CHILD UP TO 5 YEARS

By mouth

- ▶ 5 g (20 mL *Lift*[®] (previously *Glucosjuice*[®]) oral glucose liquid or 1.5 glucose tablets or half a tube of glucose 40% oral gel or 1 teaspoonful of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 5 g (half a tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 5–11 YEARS

By mouth

- ▶ 10 g (40 mL *Lift*[®] (previously *Glucosjuice*[®]) oral glucose liquid or 3 glucose tablets or 1 tube of glucose 40% oral gel or 2 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 10 g (1 tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 12–17 YEARS

By mouth

- ▶ 15 g (60 mL *Lift*[®] (previously *Glucosjuice*[®]) oral glucose liquid or 4 glucose tablets or 1.5 tubes of glucose 40% oral gel or 3 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- ▶ 15 g (1.5 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

NOTE Examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4 g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

Glucagon injection p. 533 (1 mg/mL)

BY INTRAMUSCULAR INJECTION

- ▶ Child 8 years and below or body-weight up to 25 kg: 500 micrograms (0.5 mL)
▶ Child 9–17 years or body-weight 25 kg and over: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

Glucose 10% intravenous infusion p. 674

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child 1 month–17 years: 5 mL/kg (glucose 500 mg/kg)

Seizures

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 249** (2 mg/mL, 4 mg/mL) BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 251**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

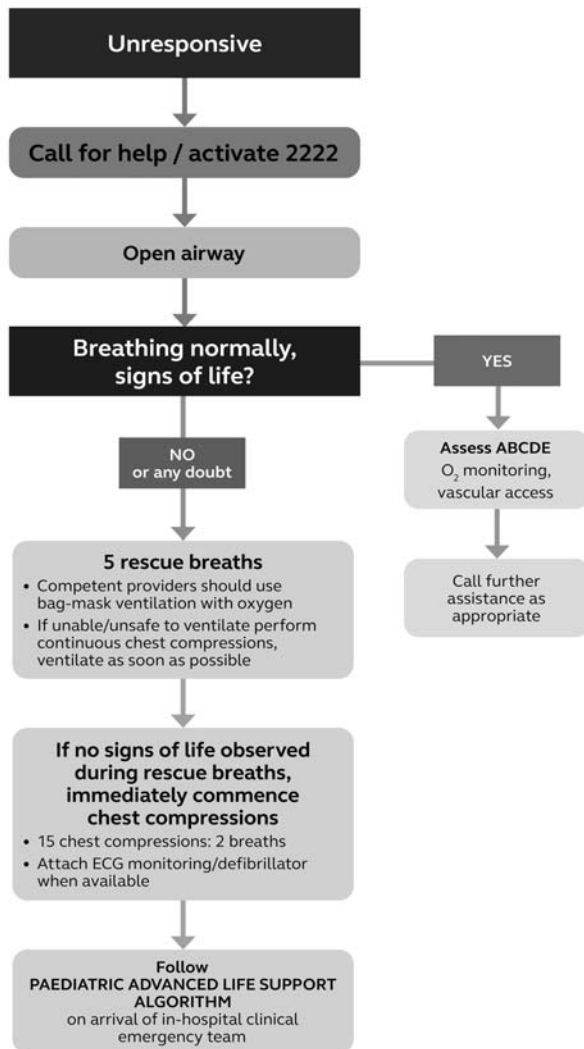

- ▶ Neonate: 300 micrograms/kg [unlicensed]
▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
▶ Child 3 months–11 months: 2.5 mg
▶ Child 1–4 years: 5 mg
▶ Child 5–9 years: 7.5 mg
▶ Child 10–17 years: 10 mg

Newborn Life Support Algorithm

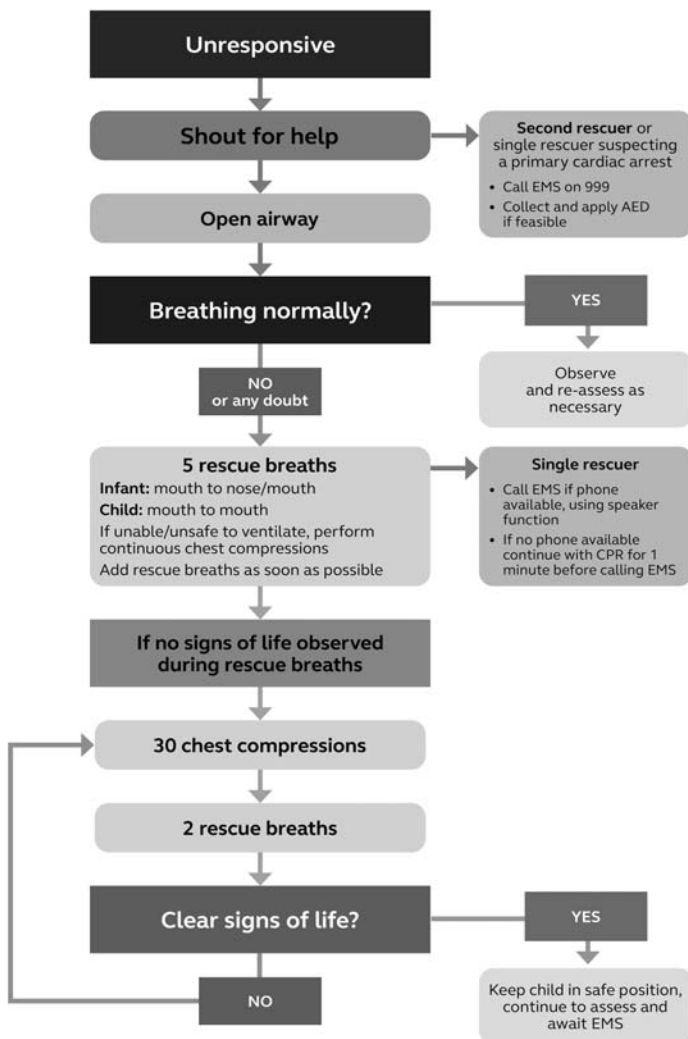

Paediatric Basic Life Support Algorithm

Paediatric basic life support

Paediatric Out-of-Hospital Basic Life Support Algorithm

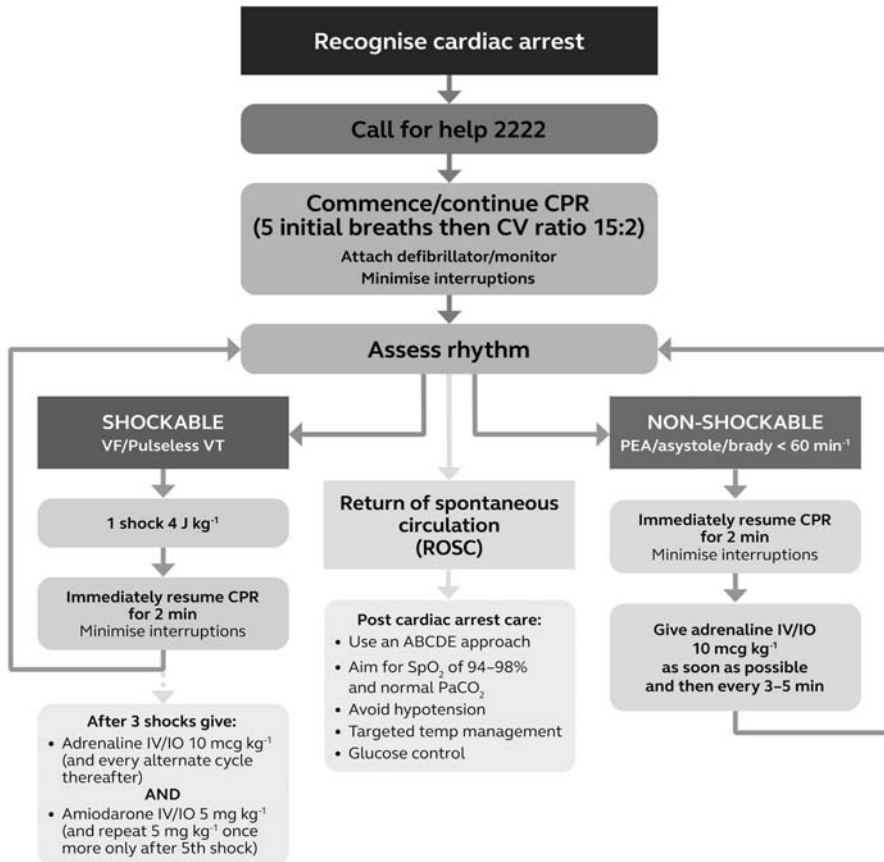

Paediatric out-of-hospital basic life support

Those trained only in 'adult' BLS (may include healthcare providers and lay rescuers) who have no specific knowledge of paediatric resuscitation, should use the adult sequence they are familiar with, including paediatric modifications.

Paediatric Advanced Life Support Algorithm

Paediatric advanced life support

During CPR

- Ensure high quality chest compressions are delivered:
 - Correct rate, depth and full recoil
- Provide BMV with 100% oxygen (2 person approach)
- Provide continuous chest compressions when a tracheal tube is in place.
- Competent providers can consider an advanced airway and capnography, and ventilate at a rate (breaths minute⁻¹) of:

Infants: 25	1–8 years: 20	8–12 years: 15	> 12 years: 10–12
-------------	---------------	----------------	-------------------

- Vascular access IV/IO
- Once started, give Adrenaline every 3-5 min
- Maximum single dose Adrenaline 1 mg
- Maximum single dose Amiodarone 300 mg

Identify and treat reversible causes

- Hypoxia
- Hypovolaemia
- Hyperkalaemia, hypercalcaemia, hypermagnesaemia, hypoglycaemia
- Hypo-/hyperthermia
- Thrombosis – coronary or pulmonary
- Tension pneumothorax
- Tamponade – cardiac
- Toxic agents

Adjust algorithm in specific settings (e.g. special circumstances)
